The classification of Adirondack lakes provides a means for describing the chemical status of this diverse group of waters. It also provides a basis for regionally assessing the effects of changes in atmospheric deposition on surface water quality. Classification schemes may be based on chemical or watershed characteristics. Watershed-based classifications consider the physical characteristics within the basin to be most important in determining both the current chemical status and the susceptibility of the lakes to change. This section presents a water-quality-based classification for the ALSC lakes. The classification is preceded by a brief overview of the general physical and chemical characteristics of the ALSC lakes and of flowpath theory (Goldstein et al. 1984). This is followed by a discussion of the theory and application of lake classification. Finally, the ALSC and ELS data bases are compared in light of the classification scheme developed.

1984–1987. 431p. Order Number DE91005645. Source: OSTI; NTIS.

Information presented integrates the results of analyses presented earlier. A method was developed during the ALSC data alone whereby changes in H^+ concentration, and thus pH, can be predicted given changes in mineral acid-base concentrations and/or DOC. Using this method, pH changes of 0.17 and 0.38 pH units were predicted in response to a 30% reduction in sulfur deposition for 4 specific lakes from the lowest ANC classes described previously. The role of inorganic ligands in supporting H^+ in solution was also investigated. Most lakes had either more than 90% or less than 10% of their hydrogen ions supported by organic ligands. The distribution of organic support of H^+ varied among lake classes, with high-DOC lakes showing higher organic support. The strength of organic acids was also quantified. Dissolved organic carbon contributes 4.5 to 5 μeq/mg DOC of strong acid to solution. These strong organics decrease both pH and ANC, and thus the common practice of considering negative values of Gran ANC evidence of acidification solely by mineral acids is not supported by the ALSC data.

15316 (ORNL/M–1148, pp. 3.1-3.3.10) **Fish communities in Adirondack lakes.** Baker, J.; Gallagher, J. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of fish communities and water chemistry, 1984–1987.* 431p. Order Number DE91005645. Source: OSTI; NTIS.

Numerous studies have been conducted on the effects of acid-base chemistry and acidification on fish communities in Adirondack lakes. The evidence for the importance of these processes includes the following: field bioassays – demonstrating that acidic surface waters with low pH and high levels of inorganic aluminum (Al) are toxic to fish and that toxic responses increase during acidic episodes; field experiments – such as those monitoring fish population responses to lake liming and subsequent reacidification, with associated declines in fish population survival and density; historical trend analyses – identifying the association between the loss of fish populations and current levels of pH and other acid-base chemistry variables; and field surveys – confirming the absence of fish (or fish species) from lakes with lower pH and higher levels of Al. However, many factors influence the suitability of lakes for fish population survival and reproduction and may also cause changes in fish communities over time. To ensure that the effects from acid-base chemistry are accurately assessed, it is essential to account for these other factors and activities. Thus, the underlying objectives of this analysis of the ALSC survey data are to (1) improve our understanding of the processes that affect fish distributions and trends in Adirondack lakes and (2) use this improved understanding to estimate the potential effects and future risks from changes in acid-base chemistry that may result from acidic deposition with greater confidence.

15317 (ORNL/M–1148, pp. 3.11-3.44) **Current status of fish communities in Adirondack lakes.** Gallagher, J.; Baker, J. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of fish communities and water chemistry, 1984–1987.* 431p. Order Number DE91005645. Source: OSTI; NTIS.

A total of 202,207 individual fish representing 53 species (including three hybrids) were caught in lakes surveyed by the ALSC. The number of species caught per lake (i.e., species richness) ranged from 0 (fish absent) to 13, with a mean value of 3.7 and median of 3.0. Among the five watersheds, the median species richness varied from 1.0 for the Oswegatchie-Black and Mohawk-Hudson watersheds to 5.0 for the Lake Champlain watershed. Four fish species were caught in over half of the lakes surveyed by the ALSC with fish present: brown bullhead (Ictalurus nebulosus) (caught in 75% of the lakes with fish), brook trout (Salvelinus fontinalis) (52%), white sucker (Catostomus commersoni) (51%), and golden shiner (Notemigonus crysoleucas) (50%). In addition, five species accounted for approximately 70% of the total catch: brown bullhead, golden shiner, white sucker, yellow perch (Perca flavescens), and pumpkinseed (Lepomis gibbosus).

15318 (ORNL/M–1148, pp. 3.105-1.50) **Historical changes in fish communities in Adirondack lakes.** Baker, J.; Warren-Hicks, W.; Gallagher, J.; Christensen, S. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of fish communities and water chemistry, 1984–1987.* 431p. Order Number DE91005645. Source: OSTI; NTIS.

Of the 1469 lakes surveyed by the ALSC, 868 (59%) were surveyed for fish in one or more years prior to the ALSC survey. An additional 109 lakes (7%) had historical reports of fish species occurrence. Our objectives was to use this historical information to assess changes in Adirondack fish communities through time and also probable causes for observed trends in the fish community. Of primary interest is the relative importance of fish population losses resulting from acidic deposition and lake acidification. The following questions were addressed: Are there more fishless lakes in the Adirondacks now than in the past? Do Adirondack lakes support fewer fish species now than in the past? How many lakes (and what proportion of the lakes with adequate data) appear to have lost fish population? What types of fish species have been lost? Are there obvious explanations, unrelated to acidic deposition, for observed fish population losses, such as a change in stocking, introductions of new species, or reclamation? How many fish populations have been lost with no apparent cause, other than perhaps surface water acidification? and Do lakes that have lost fish populations have (a) lower pH and ANC or (b) lower levels of DO or shallow-water at high-elevation conditions making them likely to experience winterkill, (c) introductions of non-native species, (d) active beaver populations, or (e) other characteristics that may affect fish communities?

15319 (ORNL/M–1148, pp. 3.45-3.71) **Habitat suitability for brook trout natural reproduction in Adirondack lakes.** Schofield, C. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of fish communities and water chemistry, 1984–1987.* 431p. Order Number DE91005645. Source: OSTI; NTIS.

The brook trout (Salvelinus fontinalis) is the primary gamefish indigenous to the Adirondack region. Although brook trout are still widely distributed across the major drainage basins of the Adirondacks, they are notably absent from many acidic waters in the western drainages. Several management programs and experimental liming studies in the Adirondacks have demonstrated that brook trout populations can be established and maintained successfully by stocking in a variety of acidic lake types if water quality is controlled by limestone applications and other physical and chemical conditions are suitable for brook trout survival. However, relatively few self-maintaining brook trout populations have been established after acidic lakes were limed and stocked. Successful natural reproduction by stocked trout was observed in only 1 of 10 limed drainage lakes in the Extensive Liming Study, and intensive efforts to develop an NSA brook trout population in one acidified Adirondack lake (Woods Lake) have been unsuccessful to date. Prediction of NSA status (either historically or in the future) for the large number of currently acidic Adirondack lakes not supporting brook trout would be of value from both management and assessment perspectives. The ALSC data base was used in this study to examine the relationships between habitat characteristics and the reproductive status of Adirondack brook trout populations. The primary objective of this study was to evaluate criteria suitable for identifying Adirondack lakes with the potential to support brook trout natural reproduction. Based on the general knowledge of brook trout spawning requirements described above, it was hypothesized that Adirondack lakes receiving significant groundwater contributions to nearshore zones should have the greatest potential for NSA brook trout status.

15320 (ORNL/M–1148, pp. 3.72-3.80) **Patterns of fish species distribution in relation to lake/watershed characteristics.** Christensen, S.; Reckhow, K.; Beauchamp, J.; Shaakir-Ali, J.; Coe, J.; Baker, J.; Smith, E.; Gallagher, J. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of*

fish communities and water chemistry, 1984–1987. 431p. Order Number DE91005645. Source: OSTI; NTIS.

The distribution of fish among Adirondack lakes is influenced by a large number of environmental and anthropogenic factors. The ALSC survey data, and the spatial association between fish presence/absence and lake characteristics, may be used to examine alternative hypotheses regarding the relative importance of these various factors in determining fish population success. Of particular interest is the degree to which lake acidity may restrict fish distributions from waters that might otherwise be suitable for fish survival. Multivariate regression analyses were used to identify lake and watershed characteristics and fishery management practices significantly associated with the occurrence of fish and the presence/absence of selected fish species in Adirondack lakes. Because of the complexity of these tasks and the number of different analyses, the methods and results are presented in detail in report appendices and only summarized briefly here. Three measures of fish status were examined: brook trout presence/absence, creek chub presence/absence, and the presence or absence of any fish species (fish/no fish). Fifty variables derived from the ALSC data base were identified that may potentially influence fish distributions. These were grouped into six broad categories: acidification response variables; baseline habitat suitability variables; productivity-related variables; natural reproduction and access variables; anthropogenic control variables; and biological variables.

15321 (ORNL/M–1148, pp. 3.81-3.104) **Fish species distribution patterns in selected Adirondack drainage systems.** Schofield, C. Oak Ridge National Lab., TN (USA); Adirondack Lakes Survey Corp., Ray Brook, NY (USA). 1990. In *Adirondack lakes survey: A interpretive analysis of fish communities and water chemistry, 1984–1987.* 431p. Order Number DE91005645. Source: OSTI; NTIS.

The integrated effects of differential physiological tolerances to acidification and behavioral regulation of environmental quality were examined in this study by determining fish species distribution patterns in relation to spatial water quality gradients within selected watersheds exhibiting different ranges in lake water quality. Using discrete drainage systems, where longitudinal gradients in water quality exist, allows these fish distribution regulatory processes to be expressed in terms of watershed-specific species distribution patterns. This approach could also provide a means of assessing the recolonization potential for sensitive fish species within watersheds that currently exhibit marked acidification gradients. A general pattern of decreasing lake acidity from small headwater lakes to larger downstream basins was documented in studies of the North Branch of the Moose River in the western Adirondacks. Correlated patterns in species richness and occurrences of acid-tolerant and sensitive fish species were associated with this longitudinal water quality gradient in the North Branch of the Moose River. The hypothesis that species distribution patterns across acidity gradients in this latter study by the observed species distributions and their measured tolerances to acidity. The primary objective of the current study was to further assess the application of this hypothesis to other Adirondack watersheds by using information on fish species occurrence and water quality available in the ALSC data base.

15322 (ORNL/TM–11360) **Transport of contaminants during storms in the White Oak Creek and Melton Branch watersheds.** Solomon, D.K.; Marsh, J.D.; Larsen, I.L.; Wickliff, D.S.; Clapp, R.B. Oak Ridge National Lab., TN (USA). Jan 1991. 130p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010445. Source: OSTI; NTIS; INIS; GPO Dep.

Environmental Sciences Division Publication No. 3395.

This report documents the transport of contaminants from Solid Waste Storage Area (SWSA) 5 along two principle pathways: the saturated groundwater system and the intermittently saturated storm flow system. The results of the storm flow sampling show a ^{90}Sr anomaly in SWSA 5 that is suggested by the similar mobility of ^{3}H and ^{90}Sr, in spite of the reactive nature of ^{90}Sr. An empirical relationship between concentration and discharge was established for ^{3}H and ^{90}Sr in the Melton Branch Watershed. The relationship is of the form $C = AD^{b}$, where C is concentration of either ^{3}H or ^{90}Sr, D is discharge at MBS, and A and b are empirical constants. A model was developed and a computer program written to separate the discharge into quick-flow and base flow components. The results of the modeling, using data collected during storm flow, showed that 44% of the annual stream discharge occurred as quick flow, whereas only 16% of the ^{3}H and 27% of the ^{90}Sr occurred as quick flow. The data show that for SWSA 5 the saturated groundwater pathway is quite important in dry years, such as the 1988 water year. Data from other areas, such as SWSA 6 suggest that the storm flow pathway may be more important in wet years. This study has several important implications for remedial actions and site monitoring. 23 refs., 52 figs., 2 tabs.

15323 (PINSTECH/RIAD–122) **Surface water/groundwater relationship in Chaj Doab.** Hussain, S.D.; Sajjad, M.I.; Akram, W.; Ahmad, M.; Rafiq, M.; Tariq, J.A. Pakistan Inst. of Nuclear Science and Technology, Islamabad (Pakistan). Radiation and Isotope Application Div. Jul 1990. 70p. Order Number DE91624470. Source: OSTI; NTIS (US Sales Only); INIS.

8 tab., 13 fig.

In order to understand the relationship between surface water and ground water in Chaj Doab (Pakistan), isotopic and chemical studies were undertaken. The data show that north eastern part of the doab, surface water and ground water are generally well connected and the recharge is mostly from the rivers either directly or through irrigation channels. Salinization of ground water is mainly due to dissolution of salts from soil sediments. (author). 8 tab., 13 fig.

15324 (PNL-SA–19276) **Biological treatment of Hanford groundwater: Development of an ex situ treatment process.** Brouns, T.M.; Koegler, S.S.; Fredrickson, J.K.; Luttrell, S.P.; Borgeson, K.A. Pacific Northwest Lab., Richland, WA (USA). Mar 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. (CONF-9103114–2: In situ and on-site bioreclamation: an international symposium, San Diego, CA (USA), 19-21 Mar 1991). Order Number DE91010008. Source: OSTI; NTIS; INIS; GPO Dep.

Liquid wastes containing radioactive, hazardous, and regulated chemicals have been generated throughout the 40 years of operations at the US Department of Energy's (DOE) Hanford Site in southeastern Washington state. Some of these wastes were discharged to the soil column, and many of the waste components, including nitrate ($NO_{3}-$) and carbon tetrachloride (CCl_{4}) have been detected in the groundwater of the unconfined aquifer at Hanford. The use of facultative anaerobic microorganisms is a promising technology for the ex situ and in situ removal of nitrates and organics from contaminated aqueous streams. This paper describes an ex situ biological process being developed at Pacific Northwest Laboratory for removal of $NO_{3}-$ and CCl_{4} from contaminated groundwater, and approaches for in situ denitrification and CCl_{4} biodegradation. 7 refs., 1 fig., 1 tab.

15325 (SAND–91-0476C) **Rapid moisture measurements in thin sand slabs.** Bell, J. (Cornell Univ., Ithaca, NY (USA)); Selker, J.S.; Steenhuis, T.S.; Glass, R.J. Sandia National Labs., Albuquerque, NM (USA). [1990]. 21p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-901280–1: The American Society of Agricultural Engineers (ASAE) conference, Chicago, IL (USA), 18-21 Dec 1990). Order Number DE91009168. Source: OSTI; NTIS; GPO Dep.

The theoretical basis for the relationship between moisture content and light transmission (FFM) is developed, and shown to correspond well to the observed behavior. A calibration procedure for FFM based on the relationship between moisture content and matric potential is presented and tested. Means of expanding the range of sensitivity of the FFM are discussed. 9 refs., 11 figs., 1 tab.

15326 (SKB-TR–90-27) **Isolation and characterization of humics from natural waters.** Allard, B. (Linkoeping Univ. (Sweden). Dept. of Water and Environmental Studies); Arsenie, I.; Boren, H.; Ephraim, J.; Pettersson, C.; Gaardhammar, G. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). May 1990. 27p. Order Number DE91625728. Source: OSTI; NTIS (US Sales Only); INIS.

A method has been developed for quantitative recovery of humic substances from aqueous systems based on ion exchange on DEAE-cellulose. A scheme is suggested for the characterization of dissolved humic substances (UV-, IR- and ^{1}H NMR-spectroscopy, elemental analysis, molecular weight determination, ^{14}C-age, functionality, carbohydrate content and acid-base properties) as a routine in the chemical analysis of natural waters. (orig.).

15327 (SKB-TR--90-29) **Characterization of humic substances from deep groundwaters in granitic bedrock in Sweden.** Pettersson, C. (Linkoeping Univ. (Sweden). Dept. of Water and Environmental Studies); Ephraim, J.; Allard, B.; Boren, H. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1990. 26p. Order Number DE91625729. Source: OSTI; NTIS (US Sales Only); INIS.

Humic substances were isolated from deep groundwaters sampled at depths between 100 and 800 m at Finnsjoen, Fjaellveden, Forsmark, Gidea, Lansjaerv, Stripa and Aespoe. The humic fraction, which largely consisted of fulvic acid in all the samples, was characterized with respect to elemental composition, molecular weight, acid capacity (COOH and OH) as well as age (^{14}C). The differences in composition and capacity between old (1270-9675 y) and fresh (reference fulvic acid from surface water, Bersbo) were minor. (orig.).

15328 (SNV--3784) **A bibliography of Swedish acidification literature 1986-1989.** Saven, I. (ed.). National Swedish Environment Protection Board, Solna (Sweden). Jun 1990. 60p. Order Number DE91763505. Source: OSTI; NTIS (US Sales Only).

In Sweden the acidification research has been very intensive in the last few years - a fact reflected in the number of papers published. This issue covering four years contains some 550 entries as compared with about 750 for the previous 10-year period. Still we are more restrictive in including the titles under more than one headline in this issue. Furthermore, it has become increasingly difficult to identify which publications to include in an acidification bibliography. Nowadays, acidification issues form an integrated part of many environmental studies as well as of more basic research. In spite of these difficulties we have followed the same principles as in the first bibliography when selecting the material. Only easily retrievable material has been included. This excludes a number of local, mimeographed reports from university departments etc. Reports on air pollution and its effects in different ecosystems have been included only when there is an obvious connection to acidification. The reports must deal primarily with Swedish conditions. Some general reports have been included, though. The bibliography gives the titles in Swedish or English. When the title appears only in Swedish the paper contains no abstract or summary in English.

15329 (TRITA-KUT--1051) **Liming of acid ground water.** Sundloef, B. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Land Improvement and Drainage. Apr 1989. 88p. (In Swedish). Order Number DE91763549. Source: OSTI; NTIS (US Sales Only).

Attempts have been made to spread calcium carbonate on the ground surface within the catchment area of the wells in various geological environments in order to assess the potential offered by such a method. It has been shown, however, that the effects on the ground water in most cases do not appear for some five years or more. It is also by no means certain whether significant improvements can be made with the method in question. Calcium carbonate (limestone) has several important advantages as an alkalizer. These include its low cost, safety in handling, and the fact that it is easily available and does not give rise to extremely high pH values in connection with overdosing. Two methods, based on the addition of calcium carbonate beneath the ground surface, have been developed and tested in field trials. One of the methods, which is primarily suitable for small sand and gravel aquifers, involves the infiltration of limestone slurry via pipes driven down below the water table. The other method, which is applicable for most kinds of unconsolidated formations, involves part of the water from the extraction well being reinfiltrated in a trench of limestone and sand some distance from the well. (20 figs., 12 tabs., 50 refs.).

15330 (WHC-SA--0989) **Radiological characterization of skyshine from a retired, low-level, radioactive liquid effluent disposal facility at Hanford.** Brown, R.C.; Perkins, C.J. Westinghouse Hanford Co., Richland, WA (USA). Feb 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-87RL10930. (CONF-910270--35: Waste management '91, Tucson, AZ (USA), 24-28 Feb 1991). Order Number DE91009421. Source: OSTI; NTIS; GPO Dep.

The 1301-N Liquid Waste Disposal Facility, located on the Hanford Site received N Reactor low-level radioactive liquid process effluent from 1962 to 1985. Radiation emanating from the top of the trench sections was not significant because of the sediments were normally under several meters of water, which provided the necessary shielding. Following retirement of the facility, the liquid in the trench sections percolated into the ground leaving the residual radioactively contaminated sediments unshielded along the bottom and sides of the trench sections. The radioactive constituents of the contaminated sediments include the gamma-emitting isotopes Co-60 and Cs-137. Because of the lack of water covering, some of the gamma photons that were emitted upward were scattered downward due to Compton interaction with atmospheric constituents. This phenomenon is known as "skyshine." A radiological characterization was required to provide guidance for determining the effectiveness of interim stabilization alternatives that would not adversely affect future Resource Conservation and Recovery Act site closure activities, (e.g., filling in trench sections with spoils from excavation activities). A noninvasive radiological characterization of this disposal facility and the affected area of the Columbia River shoreline was conducted. This characterization confirmed that skyshine is the cause of the elevated shoreline exposure rates and provided a model that could be used to rate the effectiveness of alternative interim stabilization measures. 4 refs., 5 figs.

15331 (Y/Sub--91-YP507C/1-Pt.1) **Groundwater quality assessment for the Bear Creek hydrogeologic regime at the Y-12 Plant: Groundwater quality data and calculated rate of contaminant migration: Part 1.** Oak Ridge Y-12 Plant, TN (USA); HSW Environmental Consultants, Inc., Tampa, FL (USA). Feb 1991. 489p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OS21400. Order Number DE91009206. Source: OSTI; NTIS; GPO Dep.

Quarterly monitoring to assess the extent of anthropogenic compounds in the groundwater and their rate of migration has been in progress at the S-3 Site, Oil Landfarm, and Bear Creek Burial Grounds since 1986. The original assessment programs for these sites have been modified as needed to reflect each year's assessment results. In 1989, changes in the content and presentation of the assessment data in the GWQARs were implemented. A change in the presentation of the 1989 assessment data was initiated for two primary reasons. First, the expansion of the assessment program at each site had increased the level of effort to such a degree that it became increasingly difficult to complete a detailed evaluation of the data by the March 1 reporting deadline. Second, data obtained during previous years had indicated that plumes from several sources in Bear Creek Valley had intermingled. It became apparent that a more comprehensive perspective of the assessment of groundwater quality in the valley was needed. To address these issues, a single GWQAR was prepared in 1989 for the Bear Creek Hydrogeologic Regime (BCHR), which was defined as the area extending from the west end of the Y-2 Plant to the western side of the Bear Creek Burial Grounds. Part 1 contained all the assessment data obtained in 1989, along with a calculated rate of migration. The evaluation and interpretation of the assessment data was included in Part 2. This two part reporting convention has been continued for the 1990 assessment data. 42 refs., 17 figs., 3 tabs.

15332 (DOE/BP/07096–1) **System-wide significance of predation on juvenile salmonids in Columbia and Snake River reservoirs: Annual report of research 1990.** Petersen, C.J. (Fish and Wildlife Service, Seattle, WA (USA). Seattle National Fishery Research Center); Jepsen, D.B.; Nelle, R.D.; Shively, R.S.; Tabor, R.A.; Poe, T.P. USDOE Bonneville Power Administration, Portland, OR (USA). Div. of Fish and Wildlife; Fish and Wildlife Service, Seattle, WA (USA). Seattle National Fishery Research Center. Mar 1991. 57p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AI79-90BP07096. Order Number DE91009784. Source: OSTI; NTIS; GPO Dep.

The consumption rates of northern squawfish (Ptychocheilus oregonensis) preying upon juvenile salmonids were indexed in four reservoirs (Bonneville, The Dalles, John Day and McNary) of the lower Columbia River. During the spring and summer of 1990, over 2000 northern squawfish were collected from dam forebays, dam tailraces and mid-reservoir locations. Gut content data, predator weight and water temperature were used to compute a consumption index (CI) for northern squawfish. Juvenile salmonids were found in 435 of 1598 northern squawfish guts analyzed. Besides salmonids and other preyfish, crustaceans formed a significant portion of the diet. The CI of northern squawfish varied by season and location. At most locations, summer CI's of northern squawfish were higher than in the spring. Efforts to match sample collection with times of highest juvenile salmonid passage were successful except during July at The Dalles and Bonneville Reservoirs. Consumption indices were moderate to high at several locations even when passage was relatively low, suggesting salmonid predation rate by northern squawfish was not always a function of prey density. 19 refs., 5 figs., 12 tabs.

15333 (DOE/BP/39339–3) **Assessment of the fishery improvement opportunities on the Pend Oreille River: 1989 Annual report.** Barber, M.R. (Eastern Washington Univ., Cheney, WA (USA). Upper Columbia United Tribes Fisheries Center); Renberg, B.L.; Vella, J.J.; Scholz, K.L.; Woodward, K.L.; Graves, S. USDOE Bonneville Power Administration, Portland, OR (USA). Div. of Fish and Wildlife; Eastern Washington Univ., Cheney, WA (USA). Upper Columbia United Tribes Fisheries Center. Sep 1990. 413p. Sponsored by USDOE, Washington, DC (USA); Department of the Interior, Washington, DC (USA). DOE Contract BI79-88BP39339. Order Number DE91009702. Source: OSTI; NTIS; GPO Dep.

The purpose of this study was to assess the fishery improvement opportunities on the Box Canyon portion of the Pend Oreille River. This three year study was initiated as part of the Northwest Power Planning Council's 1987 Columbia River Basin Fish and Wildlife Program. This report contains the findings of the second year of the study. Currently, yellow perch (Perca flavescens [Mitchill]) are the predominant fish species in the river and largemouth bass (Micropterus salmoides [Lacepede]) are the predominant sport fish. The objectives of the second year of the study were to determine: the relative abundance of each species in the river and sloughs; the population levels in five selected tributaries and, if possible, for fish in the river and sloughs; fish growth rates; the feeding habits and abundance of preferred prey; migration patterns; and the total fishing pressure, catch-per-unit-effort, and total harvest by conducting a year-round creel survey. 55 refs., 7 figs., 154 tabs.

15334 (BNL–45931) **Restriction/modification systems of pneumococci: Why two methylases in the DpnII system?.** Lacks, S.A.; Springhorn, S.S.; Cerritelli, S. Brookhaven National Lab., Upton, NY (USA). [1990]. 21p. Sponsored by USDOE, Washington, DC (USA); Department of Health and Human Services, Washington, DC (USA). DOE Contract AC02-76CH00016. Grant GM29721. (CONF-9006331–1: 3. international conference on streptococcal genetics, Minneapolis, MN (USA), 6-9 Jun 1990; BIO–4625). Order Number DE91010372. Source: OSTI; NTIS; GPO Dep.

The systems for DNA restriction and modification in Streptococcus pneumoniae are unusual in three respects. First, the DpnI restriction endonuclease only acts on a methylated site in DNA. Since DpnI attacks only methylated DNA, cells that make it do not require modification of their DNA. Second, strains of S. pneumoniae that do not harbor DpnI contain a complementary restriction system, that of DpnII. The DpnI and DpnII systems are mutually exclusive because DNA from a DpnI strain, which is not methylated at 5′-GATC-3′ sites, is susceptible to DpnII, and DNA from a DpnII strain, which contains 5′-GmeATC-3′, is susceptible to DpnI. Third, genetic and biochemical analysis of the DpnI and DpnII systems revealed an additional, unexpected protein in each of the restriction systems. In the DpnII system three proteins are produced, whereas in a typical restriction system, which like DpnII cleaves at unmethylated sites, only two proteins are generally found - the restriction endonuclease and a modification methylase. The function and significance of the additional protein in the DpnII system will be a major focus of this chapter. 21 refs., 2 figs., 1 tab.

15335 (DOE/BP/35245–3) **Assessment of smolt condition for travel time analysis: Annual report, 1989.** Beeman, J.W.; Rondorf, D.W.; Faler, J.C.; Free, M.E.; Haner, P.V. Fish and Wildlife Service, Seattle, WA (USA). Seattle National Fishery Research Center. Nov 1990. 120p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AI79-87BP35245. Order Number DE91009693. Source: OSTI; NTIS; GPO Dep.

The Water Budget is a volume of water used to enhance environmental conditions (flows) in the Columbia and Snake rivers for juvenile salmonids during their seaward migration. To manage the Water Budget, the Fish Passage Center estimates travel times of juvenile salmonids in index reaches of the main-stem rivers, using information on river flows and the migrational characteristics of the juvenile salmonids. This study was initiated to provide physiological information on the juvenile salmonids used for these travel time estimates. The physiological ability to respond to stressors was evaluated by measuring concentrations of plasma cortisol, glucose, and chlorides before and after a 30-s handling-stress challenge test. The development of smoltification was assessed by measuring gill Na^+–K^+ ATPase activity and plasma thyroxine concentrations. Prevalence of bacterial kidney disease in spring chinook salmon was generally higher than in 1988, ranging from 81–100% using an enzyme-linked immunosorbent assay (ELISA) method. Fish from Snake River hatcheries had more severe infections than those from mid-Columbia hatcheries. 42 refs., 19 figs., 4 tabs.

15336 (DOE/ER/12031–T3) **[Starch synthesis in the maize endosperm as affected by starch synthesizing mutants].** Wisconsin Univ., Madison, WI (USA). Lab. of Genetics. 2 Oct 1985. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-82ER12031. Order Number DE91010194. Source: OSTI; NTIS; GPO Dep.

A recent findings is that the activity of the solubilized starch granule-bound enzyme is enhanced by the addition of Glc-1,6-bisP to a reaction mixture containing Glc-1-P as a substrate. The addition of F-1,6-bisP is nearly as effective as that of Glc-1,6-bisP while F-1-P, F-6-P, R-1-P, R-5-P, Ru-1,5-bisP, or Maltose-1-P are ineffective. It is a tenable hypothesis at the present time that Glc-1,6-bisP is also utilized as a substrate by the oligosaccharide synthase or another enzyme associated with it in the high molecular complex which contains the oligosaccharide synthase that has been freed from the starch granules by the procedure of MacDonald and Preiss. This fraction also appears to be capable of interconverting Glc-1,6-bisP and F-1,6-bisP and this can account for the observation that F-1,6-bisP has the ability to accelerate the incorporation of Glc-1-P into oligosaccharides as does Glc-1,6-bisP. They are attempting currently to test the possibility that Glc-1,6-P is utilized to some extent as a substrate and that the PO_4 present on C6 in some Glc moieties in the oligosaccharide chains derives from this source.

15337 (DOE/ER/13495–T4) **[Anaerobic metabolism of aromatic compounds by phototrophic bacteria: Biochemical aspects]: Progress report, April 1, 1990–December 10, 1990.** Gibson, J. Cornell Univ., Ithaca, NY (USA). Dept. of Microbiology. [1990]. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-86ER13495. Order Number DE91009799. Source: OSTI; NTIS; GPO Dep.

Major effort has gone into purifying and characterizing a second Coenzyme A ligase involved in anaerobic aromatic acid

metabolism in Rhodopseudomonas palustris. This enzyme has some overlap in specificity with the benzoate-CoA ligase previously characterized, but differs in many other characteristics, and is antigenically unrelated. Some amino acid sequence information has been obtained, and this as well as a highly specific antiserum, will be useful for cloning the structural gene for the new ligase. In collaboration with Dr. Harwood, at the University of Iowa, we have continued to characterize a group of mutants obtained after Tn5 insertion into our clone bank, followed by transfer of the entire mutagenized bank into wild-type R. palustris. A clone which complements a group of these mutations has been insolated, and is currently being tested for ability to restore anaerobic growth on aromatic acids to other mutants isolated after chemical or uv mutagenesis of the wild-type strain. The close ties with Dr. Harwood's lab were demonstrated by the week-long visit of one of her students during last summer, to learn how to purify the benzoate CoA ligase from R. palustris. A search for possible intermediates in anaerobic metabolism of benzoyl CoA has been initiated in collaboration with Dr. Gibson, focussing on the possible role 1,4-dihydrobenzoyl CoA as a first reduction product.

15338 (DOE/ER/13496–5) **Characterization of rhamnogalacturonan I from cotton suspension culture cell walls: [Progress report].** Oklahoma State Univ., Stillwater, OK (USA). [1991]. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-86ER13496. Order Number DE91009519. Source: OSTI; NTIS; GPO Dep.

Progress has been made on the project of determining the structure of pectins. From recent progress, a covalent crosslink between rhamnogalacturonan I (RGI) and xyloglucan was hypothesized and a structure for RGI was proposed. The development of a method to determine the distribution of methyl esterification with pectins also progressed. The degree of methyl esterification of cotton cotyledon cell walls was compared to that of cotton suspension cultures. Cotyledon wall were found to have ~55% of the galacturonic acid esterified whereas suspension culture wall were only about 14% methyl esterified. 10 refs. (SM)

15339 (DOE/ER/13970–2) **CARBBANK–A structural and bibliographic data base: Annual technical progress report.** Albersheim, P. Georgia Univ., Athens, GA (USA). Complex Carbohydrate Research Center. May 1990. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG09-88ER13970. Order Number DE91010621. Source: OSTI; NTIS; GPO Dep.

An IBM PC-compatible computerized Complex Carbohydrate Structure Database (CCSD) and database management system (CarbBank) were created by researchers at the Complex Carbohydrate Research Center (CCRC) to meet the needs of persons interested in carbohydrate science. CarbBank fully supports all carbohydrates found in glycoproteins and glycolipids. They are enhancing CarbBank to provide full support for plant and bacterial oligo- and polysaccharides. The authors are creating a portable database format for the CCSD and a database core engine for CarbBank. A CCSD database format is independent of both the application programming language and the computer operating software will make the CCSD compatible with the newest relational database systems being developed for nucleotide sequences, amino acid sequences as for mass and NMR spectra by the National Center for Biotechnology Information. The CarbBank core engine, which is being written in the C++ language, can be linked into the new database system. The core engine plus system-specific interface tool kits will also allow CarbBank to be ported to more powerful computer operating systems for the PC, such as Microsoft Windows/386 and IBM PC OS/2, to RISC-based and UNIX work stations, and to Macintosh computers. The planned enhancements will enable CarbBank and information in the CCSD to be closely integrated with the larger sequence databases. These enhancements will also allow them to support the expanding needs of researchers interested in obtaining and analyzing carbohydrate sequence information.

15340 (DOE/ER/60406–T3) **[Structure and stability of nucleic acids]: Progress report, July 1, 1985–June 30, 1988.** Tinoco, I. Jr. California Univ., Berkeley, CA (USA). Dept. of Chemistry. [1988]. 18p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG03-86ER60406. Order Number DE91008274. Source: OSTI; NTIS; GPO Dep.

We have studied the conformations of DNA and RNA oligonucleotides in order to relate their structures to their biological roles. We have discovered a novel conformation for a guanine-rich sequence which occurs in telomeres. This finding of one biologically relevant non-Watson-Crick base pair suggests that other non-standard pairs may be important. We have continued a systematic study of the thermodynamics of base pair formation in double stranded DNA. We have established the conformation and thermodynamics of a 3 in. viral RNA structural element. We have made a direct comparison between the thermodynamic stability of mismatched bases and the kinetics of misincorporation of bases by DNA polymerase. Drosophila spermatogenesis and sickle hemoglobin polymerization have been studied with the differential polarization microscope, which was invented and developed in this laboratory. Left-handed Z-RNA, discovered in this laboratory in 1984, has been characterized by NMR, circular dichroism and Raman scattering. (MHB)

15341 (DOE/ER/60673–1) **[Neutron scatter studies of chromatin structure related to function]: [Progress report], April 1988–April 1990.** Bradbury, E.M. California Univ., Davis, CA (USA). Dept. of Biological Chemistry. [1990]. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG03-88ER60673. Order Number DE91010307. Source: OSTI; NTIS; INIS; GPO Dep.

This study is concerned with the application of neutron scatter techniques to the different structural states of nucleosomes and chromatin with the long term objective of understanding how the enormous lengths of DNA are folded into chromosomes. Micrococcal nuclease digestion kinetics have defined two subnucleosome particles; the chromatosome with 168 bp DNA, the histone octamer and one H1 and the nucleosome core particle with 146 bp DNA and the histone octamer. As will be discussed, the structure of the 146 bp DNA core particle is known in solution at low resolution from neutron scatter studies and in crystals. Based on this structure, the authors have a working model for the chromatosome and the mode of binding of H1. In order to define the structure of the nucleosome and also the different orders of chromatin structures they need to know the paths of DNA that link nucleosomes and the factors associated with chromosome functions that act on those DNA paths. The major region for this situation is the inherent variabilities in nucleosome DNA sequences, in the histone subtypes and their states of chemical modification and in the precise locations of nucleosomes. Such variabilities obscure the underlying principles that govern the packaging of DNA into the different structural states of nucleosomes and chromatin. The only way to elucidate these principles is to study the structures of nucleosomes and oligonucleosomes that are fully defined. They have largely achieved these objectives.

15342 (DOE/ER/60673–T1) **Neutron scatter studies of chromatin structures related to function: Progress report, July 1, 1989–April 30, 1990.** California Univ., Davis, CA (USA). Dept. of Physics. In the Progress Report for last year (7-1-88 to 6-30-89) we proposed to complete the following experiments: (1) Structure of TFIIIA/DNA complex, (2) Effect of histone acetylation on nucleosome structure, and (3) Location of lysine rich histone H5 on the nucleosome. Our major source of neutrons is LANSCE, LANL. However, for the period of this report LANSCE has been down between cycles of operation. Continuing neutron scatter studies have been carried out at the Institute Laue Langevin, Grenoble, France, on the trimmed nucleosome core particles. X-ray scatter studies have been carried out at DESY, Hamburg on the histone octamer and trimmed octamer. X-ray scatter studies have been performed also at LANL on proposed objectives. We have continued with the following of our research program; (i) assembly of fully characterized nucleosomes; (ii) effect of histone acetylation on nucleosomes; (iii) effect of full acetylation of H3 and H4 on nucleosome DNA linking number; (iv) assembly and characterization of defined minichromosomes; (v) neutron and X-ray scatter of the

histone octamer and trimmed octamer; (vi) structural studies of human sperm chromatin, histones and protamines. 5 refs.

15343 (EUR–12717) **Studies on the enzymology of cellulose degradation by the anaerobic bacterium Clostridium thermocellum and the anaerobic fungus Neocallimastix frontalis: Final report, November 1, 1986–Octoboer 31, 1989.** Bhat, K.M. (Rowett Research Inst., Aberdeen (UK)); Gow, L.A.; Wilson, C.A.; Wood, T.W. Commission of the European Communities, Luxembourg (Luxembourg). Directorate General Telecommunications, Information Industries and Innovation; Rowett Research Inst., Aberdeen (UK). 1990. 119p. Sponsored by Commission of the European Communities, Brussels (Belgium). Contract EN3B-0084-UK(HI). Source: OSTI; NTIS (US Sales Only); Office for Official Publications of the European Communities, 2, rue Mercier, L-2985 Luxembourg.

The extracellular cellulases from the anaerobic bacterium Clostridium thermocellum and the anaerobic rumen fungus Neocallimastix frontalis are very active on crystalline cellulose. In both cases the activity resides in a high molecular weight complex. The complex from C. thermocellum (termed the cellulosome) was found to be readily dissociated at pH 5.0 and at room temperature by a mixture of SDS, EDTA and DTT. Virtually all the activity of the unfractionated cellulosome was recovered when the dissociated enzyme components were reassociated by dialysis. Thus, the route is now established for the first time for a meaningful study of the mechanism of cellulase action of this commercially important enzyme system. Nearly all of the activity to crystalline cellulose shown by the cellulase of N. frontalis was associated with a fraction which comprised only 2% of the extracellular protein, 3% of the endoglucanase and 3% of the β-glucosidase. This fraction, which could be isolated by affinity chromatography on cellulose, was produced in greater quantity when the fungus was grown in co-culture with the methanogen, Methanobrevibacter smithii. The specific activity of the partially purified enzyme for degradation of crystalline cellulose was several-fold greater than that produced by the aerobic fungus T. reesei, which is being developed world-wide for its commercial potential for converting cellulose to fermentable soluble sugars. The cellulase of N. frontalis clearly has great commercial potential. 39 refs., 19 figs., 22 tabs.

Lawrence Livermore National Lab., CA (USA). [1990]. 17p. Sponsored by USDOE, Washington, DC (USA); Department of Health and Human Services, Washington, DC (USA). DOE Contract W-7405-ENG-36 ;FG03-88ER60673. GRANT PHS GM-26901;GRANT CD-484F. (CONF-9005329–1: NATO symposium, Scilly (Italy), May 1990). Order Number DE91009939. Source: OSTI; NTIS; GPO Dep.

Despite intensive investigation of mammalian chromosomes, we are still largely ignorant of the basic rules that govern their organization, structure, and functions. This situation results from the current limitations in available technologies to elucidate the structures of such complex biological systems. Whereas the powerful techniques of molecular biology have successfully addressed at high resolution functional problems at the level of nucleic acid sequences, many lower resolution questions concerning the architecture of the cell nucleus, long range order in chromosomes, and higher order chromatin structures remain largely unanswered. Techniques are now emerging that should help to remedy this situation. The use of confocal microscopy with molecular probes will tell us at the level of the light microscope a great deal about the organization of the nucleus and how it changes in different cell types; advanced light sources have the potential to image hydrated biological systems down to 10 nm, and scanning electron tunneling and atomic force microscopies have demonstrated their ability to image molecules though their ability to usefully image biomolecules such as DNA remains to be demonstrated. 32 refs., 6 figs.

15345 (DOE/ER/60997–T1) **[New hosts and vectors for genome cloning]: Progress report.** California Inst. of Biological Research, La Jolla, CA (USA). 28 Feb 1991. 3p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG03-90ER60997. Order Number DE91009996. Source: OSTI; NTIS; GPO Dep.

The main goal of our project has been to develop new bacterial hosts and vectors for cloning human DNA in the bacterium E. coli. Because human DNA is both A+T-rich and highly repetitive, many human sequences are unstable as inserts in vectors that are propagated in bacteria. During the past eight months, we have (1) assessed what fraction of human DNA inserts in cosmid vectors is unstable, (2) developed new host strains that help stabilize unstable sequence features of human DNA, and (3) begun the development of a new generation of cloning vectors that should permit the more stable maintenance and more facile analysis of large human DNA inserts.

In October of 1989, molecular biologists throughout the world formally embarked on ultimately determining the set of genetic instructions for a human being. Called by some the "Manhattan Project" a molecular biology, pursuit of this goal is projected to require approximately 3000 man years of effort over a 15-year period. The Humane Genome Initiative is a worldwide research effort that has the goal of analyzing the structure of human deoxyribonucleic acid (DNA) and determining the location of all human genes. The Department of Energy (DOE) has designated three of its national laboratories as centers for the Human Genome Project. These are Los Alamos National Laboratory (LANL), Lawrence Livermore National Laboratory (LLNL), and Lawrence Berkeley Laboratory (LBL). These laboratories are currently working on different, but complementary technology development areas in support of the Human Genome Project. The robotics group at LANL is currently working at developing the technologies that address the problems associated with physical mapping. This article describes some of these problems and discusses some of the robotics approaches and engineering tolls applicable to their solution. 7 refs., 8 figs., 1 tab.

15347 (BNL–45809) **An optimized epithermal neutron beam for neutron capture therapy (NCT) at the Brookhaven Medical Research Reactor (BMRR).** Fairchild, R.G. (Brookhaven National Lab., Upton, NY (USA)); Saraf, S.K.; Fiarman, S.; Kamen, Y.; Benary, V.; Kalef-Ezra, J.; Brugger, R.M.; Shih, A.; Gahbauer, R.A.; Goodman, J.H. Brookhaven National Lab., Upton, NY (USA). [1990]. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH00016. (CONF-901226–1: 4. international symposium on neutron capture therapy, Sydney (Australia), 3-7 Dec 1990). Order Number DE91009470. Source: OSTI; NTIS; GPO Dep.

The Brookhaven Medical Research Reactor (BMRR) was built primarily for clinical applications of NCT, with an improved beam extraction facility providing flexibility for future development of filters/moderators for NCT. This flexibility was exploited to provide an optimized epithermal neutron beam which was recently installed and tested in the east irradiation facility (shutter) of the BMRR. The new epithermal neutron beam was implemented using an Al_2O_3 moderator or "Spectrum Shifter" which was designed, installed and

tested in collaboration with associates at Idaho National Engineering Laboratory (INEL). The resultant beam is "optimized" in that the fast neutron and γ contaminations have been reduced to acceptable values (less than a few % of maximum normal tissue dose), while the epithermal neutron flux density of 1.8×10^9 n/cm^2-sec allows NCT to be carried out in 30 min in a single application. It is, however, anticipated that clinical application of NCT will be carried out in ~4 fractions (~15 min each, with bilateral irradiations), as recommended by an international committee convened to recommend the best approach to clinical trials. Biological parameters have been determined for the above beam, as described below. It is expected that sufficient data will be accumulated in ongoing phase 1 clinical trials with BSH and BPA, to allow a decision to be made about the advisability of initiating therapy trials in humans, in ~12–24 months.

15348 (DOE/ER/60899–5) **Rapid diagnosis of occult abscesses using ^{99m}Tc-labeled monoclonal antibodies.** Coons, T.A. (RhoMed, Inc., Albuquerque, NM (USA)); Rhodes, B.A.; Thakur, M.L.; Marcus, C.S.; Ballou, B. RhoMed, Inc., Albuquerque, NM (USA). [1991]. 16p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG04-89ER60899. (CONF-9103141–1: Keystone symposium on monoclonal antibodies, Denver, CO (USA), 10-16 Mar 1991). Order Number DE91009258. Source: OSTI; NTIS; GPO Dep.

Acute infections, such as appendicitis and occult infections in AIDS patients, can be diagnosed within two hours by gamma scintigraphy after i.v. administration of ^{99m}Tc labeled antibodies reactive with human granulocytes. The antibody, murine IgM anti-SSEA-1, is partially reduced using Sn(II) to expose and protect reactive sulfide groups. The antibody is then purified, stannous tartrate and stabilizers are added, and the mixture is lyophilized. To label, sodium pertechnetate is added. After a 15 minute incubation the tracer drug is injected. The rate of accumulation and degree of concentration at the site of infection is presumptively determinative of the severity of the infection. Acceptance criteria and tests for the ^{99m}Tc labeled antibody product have been established and validated. Greater than 93% of the ^{99m}Tc is firmly bound to the protein as determined by quantitative HPLC. Radiochemical impurities, colloidal ^{99m}Tc and free pertechnetate are together less than 4% as determined by thin layer chromatography. The immunoreactive fraction, measured by binding to solid phase antigen, and affinity measured be ELISA, are unchanged by the ^{99m}Tc-direct labeling process. Two hour blood clearance in rats is within 90% of the value of the ^{125}I labeled analog. The immunoreactive fraction decreases less than 10% when incubated in human plasma for 24 hours. This method has been compared to other direct labeling methods, and found to give higher radiochemical yields. 5 figs.

The applications of radionuclides in medicine can be classified as: (a) in vitro tests; (b) in vivo tests - imaging and non-imaging; (c) uses in treatment. In vitro uses are important but use very small activities and are in part being replaced by such alternative methods as enzymatic assays. The major uses of radionuclides in medicine are in in vivo diagnosis; these uses are those in which small amounts of radiotracer, usually between 75 and 750 megabecquerels, are administered to patients and the activity either measured or imaged. Lastly there are a few therapeutic uses of injected radionuclides, although such uses may involve activities of up to 6000 megabecquerels each.

15352 (DOE/ER/60409–5) **Modulation of lymphopoiesis: Annual report.** Rosse, C. Washington Univ., Seattle, WA (USA). Dept. of Biological Structure. [1990]. 9p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG06-86ER60409. Order Number DE91009592. Source: OSTI; NTIS; GPO Dep.

Ongoing experiments contribute to the four specific aims in our current 3-year project period studying lymphopoiesis using CE mammary adenocarcinoma (CE maca) mice. Specific Aim 1: Function of Bone Marrow Stroma in CE Maca Bearing Mice. We have concluded that bone marrow stromal cells from tumor bearing animals are as effective as bone marrow stromal cells from normal animals at supporting B lymphopoiesis in culture. If stromal cell disfunction occurs in tumor bearing animals, the effect is not long lasting. Specific Aim 2: Factors Elaborated by CE Maca. Conditioned medium from CE maca cultures induces bone resorbing activity in bone organ cultures. We have identified a 32 kDa protein that meets the criteria for an osteoclast specific growth factor in this medium. However, we have also found that even though an osteoclast specific growth factor exists, a growth factor whose primary targets are granulocyte precursors will also stimulate osteoclast activity. Specific Aim 3: In Vitro Systems for Investigating Modulation of NK Lymphopoiesis by CE Maca. CE maca is shown to inhibit NK all production as well as B all production. In the course of the these experiments, we have established conditions for enriching NK precursors and have established a prototype long term bone marrow culture system which shows NK cell production. Specific Aim 4: Relationship Between Myciogenic and Intrathymic T Cell Precursors. There is evidence for a stream of T all maturation in both host (or intrathymic) cells and non-host (both hematogenous and intrathymic) cells. If thymic atrophy is induced by cortisone (a depopulation equivalent to that caused by 1000 rad) our data conclusively show thymic recovery is effected almost exclusively by intrathymic cells. This assigns a much greater importance to intrathymic T all progenitors in the maintenance of T cell production in the thymus than has been hitherto recognized. (MHB)

15353 (LA-UR–91-829) **Linking structure and function: Information processing in the brain.** Gremillion, M.A.V. Los Alamos National Lab., NM (USA). [1990]. 24p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9006299–: 1990 Santa Fe Institute summer school on

complex systems, Santa Fe, NM (USA), 12-16 Jun 1990). Order Number DE91009946. Source: OSTI; NTIS; GPO Dep.

Traditionally, theories of function in neuroscience have emerged from physiology. Physiologists have suggested a number of means by which information in the brain can be processed, yet the principles underlying the generation of these phenomena are not well understood. A complex systems approach would be to examine the overall structure and function of the system and to attempt to establish a common framework for information processing interactions. This paper will use the structure-function relationship as a basis for exploring units of information processing. It will examine the brain as a whole, first providing the non-specialists with an short overview of the structure and some of the functions or outputs of the brain. It then very briefly reviews three of the prominent theoretical concepts that have emerged in the last few decades: receptive fields, feature extraction, and parallel processing. Next, it addresses the question of information processing and outlines the structures which have traditionally been proposed to be the basic unit of information processing. An alternative unit on which information processing in the brain might be based is then proposed, and data outlined to support it. Finally, the implications of this different mode of processing are discussed, both for the brain and for other complex systems. 40 refs., 4 figs., 2 tabs.

Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91009879. Source: OSTI; NTIS; INIS; GPO Dep.

The purpose of this study is largely to explore and expand on the thesis that biological structures and their functions are suited to. Form indeed follows function and if we are to understand the workings of a living system, with all that such an understanding promises, we must first seek to describe the structure of its parts. Descriptions of a few achievements of structural biology lay the groundwork, but the substance of this booklet is a discussion of important questions yet unanswered and opportunities just beyond our grasp. The concluding pages then outline a course of action in which the Department of Energy would exercise its responsibility to develop the major resources needed to extend our reach and to answer some of those unanswered questions. 22 figs.

15355 (DOE/ID/12608–3-Vol.1) **Design and control of energy efficient food drying processes with specific reference to quality; Model development and experimental studies: Moisture movement and dryer design: Phase 2, Final report, July 1, 1987–August 31, 1989.** Kim, M.; Litchfield, B.; Singh, R.; Liang, H.; Narsimhan, G.; Waananen, K. Purdue Univ., Lafayette, IN (USA). Aug 1989. 192p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG07-85ID12608. Order Number DE91010644. Source: OSTI; NTIS; GPO Dep.

The ultimate goal of the project is to develop procedures, techniques, data and other information that will aid in the design of cost effective and energy efficient drying processes that produce high quality foods. This objective has been sought by performing studies to determine the pertinent properties of food products, by developing models to describe the fundamental phenomena of food drying and by testing the models at laboratory scale. Finally, this information is used to develop recommendations and strategies for improved dryer design and control. This volume, Model Development and Experimental Studies, emphasizes the direct and indirect drying processes. An extensive literature review identifies key characteristics of drying models including controlling process resistances, internal mechanisms of moisture movement, structural and thermodynamic assumptions, and methods of model coefficients and material property measurement/determination, model solution, and model validation. Similarities and differences between previous work are noted, and strategies for future drying model development are suggested.

These data will be used to develop strategies for reducing the energy requirements of food drying. Task 1, Literature Review; Task 2, Analytical Techniques; and Task 6, The Food Properties Test Plan has been completed. Progress has been

made on Task 5, Drying Model Development and Task 7, Laboratory Dryer studies; Task 8, Food Properties Studies and Task 9, Recommendation.

15360 (DOE/ID/12608–T5) **Design and control of energy efficient drying processes with specific reference to foods: Quarterly report, July 1, 1987–October 1, 1987.** Franzen, K.; Kim, M.; Liang, H.; Murakami, E.; Narsimhan, G.; Okos, M.; Singh, R.; Waananen, K. Purdue Univ., Lafayette, IN (USA). 10 Oct 1987. 22p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG07-85ID12608. Order Number DE91010710. Source: OSTI; NTIS; GPO Dep.

Work on Phase 2 of the drying project was started during the last quarter. Progress on Task 10 (Revision of Drying Models) included a review of fundamental drying theory, and an investigation of experimental methods to determine model coefficients. Models for a drum dryer were also analyzed this quarter. Progress on Task 11 (Dryer Studies) included an analysis of a pressurized drying chamber, and installation of a vacuum drum dryer. Further work is needed to prepare both systems for experimental drying studies. Progress on Task 12 (Food Quality Studies) included collection of data on browning and vitamin A degradation in nonfat dried milk. Analysis and interpretation of the data are planned for the next quarter. Thermal property tests on porous food materials were also investigated during the past quarter. Progress on Task 13 (Recommendations/Strategies for Dryer Design and Control) included a review of dryer control strategies presented in the literature. A survey of available sensors for dryer control is planned for the next quarter.

This paper describes research on the following topics: revision of drying models; dryer studies; food quality studies; recommendations/strategies for dryer design and control; and moisture mobility and interaction in foods.

15363 (IAEA-TECDOC–576) **Food irradiation for developing countries in Africa: Proceedings of an international seminar held in Dakar, Senegal, 15-19 February 1988.** International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. 232p. (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). Order Number DE91624594. Source: OSTI; NTIS (US Sales Only); INIS.

The amount of post-harvest losses of food is considered to be highest on the African continent. As a result, increasing numbers of countries in Africa are suffering from problems of hunger and malnutrition, which range from chronic to acute. Food irradiation could play an important role in reducing the high rate of food losses especially in the case of food grain, root crops and dried food in this continent provided that proper infrastructure to employ this technique could be identified. Irradiation could contribute positively to the safety of food from microbiological and parasitic infection. A panel of experts participated at the round table discussion to assess the potential application of the technology in Africa. Some of the items for which technical feasibility has been established for food irradiation preservation include yams, onions, potatoes, maize, millet, sorghum, cowpeas and other pulses, cocoa beans, spices (pepper) and condiments, meat and poultry, fish and fishery products, animal feed, etc. In considered the local demand, a suitable choice of the type and size of the facility should be made. The design should allow up-grading in both size and automated operation to meet future expansion of the existing facility, but small commercial scale facilities, of low cost, should be considered to start with. Whatever type of equipment chosen, (whether Gamma or Electron Beam) safety, reliability, maintainability, and simplicity of operation should be of major consideration. It is recognized that for a project to be concluded on a reasonable schedule, technology transfer and training should be incorporated into the complete package. In addition back-up technical infrastructure in the country should be strengthened. The effective procedures demonstrated in a number of countries for performing consumer acceptance studies on irradiated foods, should be adopted in a slightly modified form adapted to the different target populations. (Abstract Truncated)

Loss of foods in storage due to infestation of insects varies from 10-25%. The fumigation is being used to control stored product pests in storage. The use of toxic chemicals to control insects has been questioned due to their toxic residues. There is a need for supplementary method to protect food from loss in storage. Irradiation has been found to be one of the methods which could effectively be used for disinfestation of stored food products. Considerable research and development work has been carried out which shows that insects in all their development stages could be disinfested at a dose of 0.50 kGy. Low dose of radiation has also been found to control the insects of quarantine importance. After disinfestation by radiation the products have to be protected from re-infestation. Experimental results on packages studies show that proper packaging material could be developed to check re-infestation of insects after irradiation treatment. Therefore, irradiation is an effective physical method which could be used for the disinfestation of all stored food products. (author). 10 refs.

The loss of grain following the harvest can reach 40% in some tropical regions where losses during storage have several causes, with serious consequences as regards both quantity and quality. The control methods currently used are physical or chemical. The main advantage of chemical methods is their effectiveness, but the use of insecticides is limited by the toxicity of some of the substances involved, the presence of toxic residues and the emergence of resistant strains. The technique of irradiation consists in exposing grain to ionizing radiation which destroys larvae. The advantage of this technique is its capacity for continuous treatment of large quantities of grain in a highly automated manner without leaving residues or causing environmental contamination. The energy cost of the treatment is low. The main constraint on this treatment is the necessity of preventing any subsequent re-infestation by the pests. A grain disinfestation facility equipped with electron accelerators has been in industrial operation in Odessa since 1983 with a processing capacity of 400 t/h. The savings

achieved by using the irradiation process make such a facility pay off within a few years. Electron accelerators appear to be more economical for the processing of large tonnages in bulk, whereas a gamma irradiator seems more suitable for processing grain in sacks. The present and future status of research activity in food irradiation technology in Nigeria has been highlighted with particular emphasis on the work at the University of Ibadan. Work done to date has clearly demonstrated that food irradiation technology has a lot of promise in extending the shelf life of many staple foods in Nigeria. Future research programmes in food irradiation technology would be directed towards establishing the commercial feasibility of the process. (author). 21 refs, 1 fig., 1 tab.

The industrial irradiation of food has specific procedural, technological and economic features which distinguish it from industrial irradiation in general. The resources for implementation of this technique, both the irradiation equipment itself and the associated installations, will therefore necessarily be different from those currently used for industrial irradiation. A range of pallet irradiators for numerous applications has been suggested by a French engineering firm. The proposed equipment is simple, can be adapted to individual needs and can deal with increasing production, whether in specialized or multipurpose use. Realistic estimates of investment costs are given for several models from the range. Operating costs are estimated for two applications to African food products, namely treatment of the yam to inhibit sprouting and disinfestation of tropical fruits such as the papaya. It is shown that the costs are highly sensitive to variations in the quantities treated. The economic interest of the treatments is assessed, taking into account problems that arise with the organization of outlets for these products. (author). 14 refs, 5 figs, 4 tabs.

A number of potential applications of food irradiation in Nigeria as demonstrated in Laboratory studies have been highlighted. These include: inhibition of sprouting and extension of the shelf life of yams and onions; control of mouldiness in cocoa beans and cowpea; and decontamination of dried ground red pepper. With these applications as a starting point, the next approach is to move from the technical feasibility stage to the stage that would lead to commercialization. What this paper has attempted to do is to look into the economic, technical and other considerations that would lead to a successful introduction of Food Irradiation Technology in Nigeria. The extent of post-harvest losses in Africa is sufficient reason for the application of appropriate preservation methods to gain maximum benefit from food production. Irradiation is one possibility worth considering, in view of its capacity to destroy biological spoiling agents (e.g. pathogenic microorganisms, insects, etc.) and to inhibit certain catabolic processes involved in the deterioration of various foodstuffs. This paper shows, however, that there are still various constraints on the development and application of irradiation in Africa. These include psychological barriers, the lack of socio-economic feasibility studies, the lack or insufficiency of qualified staff, and economic and financial restrictions in the majority of countries. Geographical and infrastructural constraints on the installation of irradiation units should also be considered, as well as the legal framework to regulate the marketing of irradiated food products. Despite these various constraints, the advantages of irradiation for preserving foodstuffs, suggests that it should have great potential for commercial use in Africa. This should, however, be preceded by a stage of active experimentation on local products and an information campaign directed at potential promoters and consumers. Information must be made available to the general public in order to attenuate fears relating to nuclear technology. The development of a pool of staff specialized in radiation processing and its applications is also a prerequisite. Finally, attention is drawn to the programme to be implemented by the Regional African Technology Centre, in co-operation with the International

Atomic Energy Agency, to promote the application of irradiation in Africa. (author). 11 refs, 1 tab.

Source: OSTI; NTIS (US Sales Only); INIS.

Food irradiation involves complex physical and chemical processes requiring the establishment of research programmes specific to the installations. Hence, it cannot be considered a process which is fully understood. Therefore, bearing in mind its effectiveness in dealing with bacteriological contamination that can accelerate food deterioration, an irradiation programme should be set up in Senegal to combine research with selective treatment of foodstuffs. Such a programme is under consideration. (author).

15373 (IAEA-TECDOC–576, pp. 145-150) **Foodborne disease in Africa and irradiation as a potential control technique.** Roberts, T. (Department of Agriculture, Washington, DC (USA). Economic Research Service); Murrell, D. International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). Source: OSTI; NTIS (US Sales Only); INIS.

Foodborne disease appears to be increasing worldwide. Both the first and second World Congresses on Foodborne Infections and Intoxications supported irradiation of food as a way to reduce foodborne disease. Doses required to kill or control pathogenic microorganisms and parasites are investigated. Meats are the primary source of many foodborne diseases. Several potential uses for pathogen control are technically feasible, but care must be taken to avoid recontamination after irradiating and packaging must be used which will not permit growth of botulism. (author). 10 refs, 5 tabs.

15374 (IAEA-TECDOC–576, pp. 151-168) **Technology and economy of radiation facilities for food processing.** Laizier, J. (CEA, 75 - Paris (France). Projet Ionisation). International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (In French). (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). In *Food irradiation for developing countries in Africa: Proceedings of an international seminar held in Dakar, Senegal, 15-19 February 1988.* 232p. Order Number DE91624594. Source: OSTI; NTIS (US Sales Only); INIS.

Till 1980, almost all the available experience on the technology and economy of radiation facilities was based on radiation sterilization and on the chemical applications. The needs related to food processing are quite different, and new analyses and concepts were then emerging progressively after the JEFCI of 1980, which are worth describing. From the technical point of view, important progress was achieved for optimizing the gamma facilities in view of their intended use, and for designing fully industrial facilities of small size. On the other hand, the possibility appeared of using high energy electron beams in good economical conditions. From the economical point of view, it now appears possible to estimate realistic processing costs with satisfaction. Examples show that this possibility does exist in the whole range of food processing, in spite of the very wide range of economical conditions to which they are corresponding. (author). 11 figs.

15375 (IAEA-TECDOC–576, pp. 177-188) **Radiation disinfestation of grains and cocoa beans.** Appiah, V. (Ghana Atomic Energy Commission, Legon, Accra (Ghana). Dept. of Biology, Food and Agriculture). International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). In *Food irradiation for developing countries in Africa: Proceedings of an international seminar held in Dakar, Senegal, 15-19 February 1988.* 232p. Order Number DE91624594. Source: OSTI; NTIS (US Sales Only); INIS.

A series of experiments has been performed by Ghanaian scientists from 1977 to 1987 to evaluate the seriousness of infestation and to establish effective doses for radiation disinfestation against insects and fungi which cause deterioration in grains and cocoa beans. Supporting investigations have been done on the effect of radiation disinfestation on some quality parameters and wholesomeness of grains (with maize as the test grain) and cocoa beans. A minimum dose of 0.8 kGy was established for effective control of insects present in stored grains and cocoa beans. For the decontamination against fungi and yeasts, a combination of moist heat (85% RH) applied to 60 deg. C for 30 min followed by a dose of 4 kGy was effective for maize and moist heat (85% RH) applied 80 deg. C and a dose of 4 kGy was recommended for cocoa beans. No significant difference was found between the organoleptic qualities of the products from maize and cocoa that had been treated with moist heat and radiation and the untreated samples. The cooling (solidifying) curves of cocoa butter prepared from untreated and treated cocoa beans were very similar. Irradiated cocoa beans were found to be wholesome. The prospects of radiation disinfestation of grains and cocoa beans have also been discussed. (author). 27 refs, 4 tabs.

15376 (IAEA-TECDOC–576, pp. 189-207) **Irradiation as a process in eliminating pathogens in Ghanaian smoked tuna.** Appiah, V. (Ghana Atomic Energy Commission, Legon, Accra (Ghana). National Nuclear Research Inst.); Nketsia-Tabiri, J.; Gbedemah, C.M.; Melfah, P.T. International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). In *Food irradiation for developing countries in Africa: Proceedings of an international seminar held in Dakar, Senegal, 15-19 February 1988.* 232p. Order Number DE91624594. Source: OSTI; NTIS (US Sales Only); INIS.

The hygienic quality of Ghanaian smoked tuna was determined microbiologically by examining samples obtained from the local market. Escherichia coli was present in 30% of the samples examined; Staphylococcus aureus was prevalent in 80% of the samples. The microorganisms present were predominantly bacteria, moulds and yeasts occurring occasionally in low concentrations. Freshly smoked tuna were irradiated at doses 0, 1.0, 2.0, 3.0, and 4.0 kGy and subjected to organoleptic evaluation for the colour, taste and texture. The mean scores for colour, taste and texture were beyond the borderline for acceptability. The doses applied did not cause any significant change in the organoleptic quality of smoked tuna. Smoked tuna of low and high salt concentrations were irradiated at the doses 0, 1.0, 2.0, 3.0, and 4.0 kGy. One batch of the treated fish was stored in a refrigerator (5-10 deg. C) and the other at ambient (25-28 deg. C). They were examined at intervals for organoleptic and microbiological quality. The shelf-life of smoked tuna with low salt content was extended by 3 days when irradiated at 3.0 kGy and that of high salt content for 6 days. Cold storage delayed spoilage and products were in good condition for more than 12 days of storage. A number of packaging materials were evaluated for the packaging of irradiated smoked tuna. Paper and vacuum sealed polythene were found to be better. Irradiated smoked tuna was transported to Kumasi (250 km), analysed and the results compared to that of a batch kept in the laboratory. Transportation was found not to affect the irradiated packaged fish significantly. (author). 20 refs, 5 figs, 8 tabs.

Source: OSTI; NTIS (US Sales Only); INIS.

Tests and polls of consumer acceptance of irradiated foods, performed over the past 25 years, are briefly reviewed arriving at some general conclusions regarding the factors contributing towards positive results. Also reviewed are claims of "organizations" opposing acceptance of irradiated foods and the responses to these claims. The activities of the international bodies (FAO, IAEA and WHO) in generating information for public education are briefly described. (author). 9 refs, 1 tab.

15378 (IAEA-TECDOC–576, pp. 209-222) **Yams preservation by irradiation in Cote d'Ivoire.** Kodia, A.A. (Abidjan Univ., Abidjan (Cote d'Ivoire). Lab. de Radiometrie); Kouadio, K.G. International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (In French). Source: OSTI; NTIS (US Sales Only); INIS.

The present work deals with the effect of gamma irradiation on sprouting, loss of weight, respiration, proteins, total sugars, enzymes, organoleptic properties, and on consumer acceptance of irradiated yams. Three local varieties of yams have been chosen for this study because they are the most appraised in the market. (author). 12 refs, 6 figs, 7 tabs.

15379 (IAEA-TECDOC–576, pp. 223-229) **Prospects for food irradiation in Algeria.** Boussaha, A. (Haut Commissariat a la Recherche, Algiers (Algeria). Centre d'Etudes Nucleaires et Solaires). International Atomic Energy Agency, Vienna (Austria); Food and Agriculture Organization of the United Nations, Rome (Italy). Dec 1990. (CONF-880214–: Seminar for developing countries in Africa on food irradiation, Dakar (Senegal), 15-19 Feb 1988). In *Food irradiation for developing countries in Africa: Proceedings of an international seminar held in Dakar, Senegal, 15-19 February 1988.* 232p. Order Number DE91624594. Source: OSTI; NTIS (US Sales Only); INIS.

The average annual production of potatoes in Algeria is approximately 80,000-1,000,000 tonnes. Loss in potatoes in summer months is high due to lack of storage place. Estimated production of onion is 200,000 to 250,000 per annum. At least 25% of the production needs to be stored for off-season consumption. The average annual date production is 200,000 tonnes. The dates are infested with insects. Fumigation has been practised with limited results. Irradiation studies have been carried out to control sprouting of potatoes and onions. It is proposed that irradiation disinfestation of dates will also be carried out in Algeria. Economic feasibility studies for the establishment of a multi-purpose irradiator treating potatoes, onions and medical products have been carried out. It was found that an establishment of a commercial irradiation facility would be feasible in Algeria to treat food and medical products. (author). 4 tabs.

15380 (INIS-mf–12806, pp. 336-339) **Detection of termite infestation.** Easey, J.F. (Australian Atomic Energy Commission Research Establishment, Lucas Heights (Australia)). Canadian Nuclear Association, Toronto, ON (Canada). 1983. 388p. (CONF-830934–: 4. Pacific Basin nuclear conference, Vancouver (Canada), 11-15 Sep 1983). In *Proceedings of the fourth Pacific Basin nuclear conference.* Order Number DE91626129. Source: OSTI; NTIS (US Sales Only); INIS.

Over the past 10 years the Australian Atomic Energy Commission has had a program of research into the use of radioisotope techniques for studying termite infestations. The studies have been divided between two aspects of termite behaviour: their behaviour in a natural environment, and their behaviour in an urban environment where they co-exist with man and have to cope with his attempts to disturb or eradicate them. Scandium-46 oxide was incorporated into a sawdust-agar gel mixture packed into a hole drilled in wood dowelling. Later lanthanum 140 in a diethylenetriaminepentaacetic acid complex was used, both in the natural environment and in surveys of historic buildings in Sydney. Other termites will accept a bait made from agar gel into which either gold-190 colloid or iodine-131 iodide has been incorporated.

15381 (INIS-mf–12806, pp. 324-328) **Food irradiation and its application to Pacific Basin countries.** Kawabata, T. (National Inst. of Health, Tokyo (Japan)). Canadian Nuclear Association, Toronto, ON (Canada). 1983. 388p. (CONF-830934–: 4. Pacific Basin nuclear conference, Vancouver (Canada), 11-15 Sep 1983). In *Proceedings of the fourth Pacific Basin nuclear conference.* Order Number DE91626129. Source: OSTI; NTIS (US Sales Only); INIS.

Food irradiation is gaining increasing recognition as a physical method of food preservation characterized by less energy consumption. Several important breakthroughs in food irradiation have been made in recent years. There is renewed industrial interest in food irradiation in various countries, especially in the developing countries of Asia and the Pacific. This paper discusses several topics on recent research and development work in food irradiation with special reference to the Asian Regional Cooperative Project on Food Irradiation.

15382 (ORNL/FTR–3874) **[Enzyme use in the Jute Industry]: Foreign trip report, November 26, 1990–December 27, 1990.** Niyogi, S.K. Oak Ridge National Lab., TN (USA). 15 Mar 1991. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91009642. Source: OSTI; NTIS; GPO Dep.

This report covers my official visit to the Indian Jute Industries' Research Association (IJIRA), Calcutta, India. The visit lasted a little over two weeks, including two trips to three jute mills outside Calcutta and a one-day visit to the library of the Indian Institute of Chemical Biology, Calcutta. The report describes the applications of enzymes (derived from a moldy wheat bran extract) in upgrading the jute fiber and in enhancing the quality of tamarind kernel powder used for sizing of jute. The various methodological developments in these processes are discussed in detail along with suggestions for possible improvements. The report also describes the visits to the jute mills where enzyme applications are being made. Interactions with the IJIRA research staff are described in detail. My contributions to the Project are described along with specific recommendations for future research.

15383 (ANL/CP–71416) **Protection by WR-151327 against late-effect damage from fission-spectrum neutrons.** Grdina, D.J. (Argonne National Lab., IL (USA)); Wright, B.J.; Carnes, B.A. Argonne National Lab., IL (USA). [1990]. 12p. Sponsored by USDOE, Washington, DC (USA); National Cancer Inst., Bethesda, MD (USA). DOE Contract W-31109-ENG-38. Grant CA-37435. (CONF-9011167–3: International colloquium on neutron radiation biology, Rockville, MD (USA), 5-7 Nov 1990). Order Number DE91010568. Source: OSTI; NTIS; INIS; GPO Dep.

Considerable effort has been expended to develop chemical agents capable of modifying radiation-induced damage to biological systems. The authors describe here differences in the radioprotective effect of WR-151327, depending on the sex of the animal and the post-irradiation time interval considered. The greatest effect in female animals is prior to 805 days post irradiation. The greater protection in male animals is seen during the time increment following 850 days after irradiation. While it is difficult at present to ascribe these effects to a particulate model, it is suggestive that hormonal factors may play a role in aminothiol protection against radiation-induced life shortening and concomitant tumor induction in the $B6CF_1$ hybrid mouse system. With respect to subsequent tumor induction, their preliminary findings to be published elsewhere

suggest that tumors of lymphoreticular origin are the class of tumors most affected by the administration of a radioprotector prior to irradiation. 23 refs., 4 figs.

15384 (BfS-ISH-142/90) **Underlying data for derived emergency reference levels. Characterization of critical population groups with special consumption habits in Bavaria.** Burkhardt, J.; Lux, D. Bundesamt fuer Strahlenschutz, Neuherberg (Germany, F.R.). Inst. fuer Strahlenhygiene. Sep 1990. 75p. Order Number DE91764959. Source: OSTI; NTIS (US Sales Only); INIS.

Among the dose-relevant products, raw milk was the most critical food item for self-supporters during the first 1-2 years after Chernobyl. The relatively high body burden of radiocesium, measured in the group of hunters, can be explained by the fact that large amounts of contamined game are consumed. With respect to internal contamination, mushroom-eaters rank in an intermediate position. The mushroom-eaters reacted to the results from the first whole-body-measurements with special caution by selecting less contaminated wild-mushrooms for meals and by avoiding highly contaminated species, such as Boletus badius. Additionally self-supporters obtain about 75% of dose-relevant foodstuffs from the region. (DG).

15385 (EMO-1031) **Reconstruction of dose equivalents to the public from the ^{60}Co Irradiator Facility at the Laboratory for Energy-Related Health Research.** Chapman, T.E.; Scherpelz, R.I. Pacific Northwest Lab., Richland, WA (USA). Environmental Management Operations. Mar 1991. 51p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. Order Number DE91010126. Source: OSTI; NTIS; INIS; GPO Dep.

Because of the uncertainties associated with the dose equivalents received by the public, the DOE has tasked Environmental Management Operations (EMO), as part of the LEHR Environmental Restoration project commissioned by DOE, to reconstruct the dose equivalents received by the public adjacent to the LEHR site. The purpose of this study was to determine the potential radiation dose equivalents received by individuals in publicly accessible areas and to provide estimates of the associated risks to these individuals from the outdoor irradiations. EMO has reconstructed the radiation dose equivalent rates to the offsite areas using actual environmental radiation monitoring data augmented by Monte Carlo computer modeling of the radiation dose equivalent rates where necessary. This report describes the irradiator and adjacent areas, available environmental radiation data, the computer modeling and dose equivalent rate projections, occupancy determinations, and reconstructed dose equivalents. A risk factor is estimated for each of the dose equivalents calculated for the public. Traditional units are used throughout this report rather than SI (metric) units for reasons of clarity. 4 refs., 3 figs., 6 tabs.

KRB-IV. Chast' 1.

Methods of estimation and prediction of the degree of skin radiation injury as a results of accidental or planned single irradiation based on determination of quantitative relations between the absorbed dose depth distribution and the number of clonogenic basal cells, survived in epiderm and its derivatives after irradiation, are described. The given method of determination of ionizing radiation effect on skin permits to assess quantitatively the radiological effect - decrease of basal cells - using the results of absorbrd dose measurements. This permits to predict kinetics and state of acute radiation skin injury, thus settling the problem of medical care to personnel, to optimize maintenance and decontamination measures, to present foundation for radiotherapy.

15427 (LA–11997-MS) **Mortality among workers at the Mound Facility: A preliminary report.** Reyes, M.; Wilkinson, G.S.; Tietjen, G.L.; Wiggs, L.D.; Galke, W.A. Los Alamos National Lab., NM (USA). Apr 1991. 26p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. Order Number DE91010482. Source: OSTI; NTIS; INIS; GPO Dep.

Mortality among 4,697 white males who were employed at the Mound Facility between 1943 and 1979 was compared with expected mortality based on US white male death rates. Standardized mortality ratios (SMRs) of 96 were observed for both all causes and all cancers. SMRs for digestive cancers and unintentional injuries were significantly less than 100. No SMR was significantly greater than 100 for these workers. A significantly elevated lung cancer SMR was observed for the subcohort of workers employed from 1943–1959, a period during which polonium-210 was processed at the plant. To determine the potential impact of wartime selection factors, this time period was further divided into two periods, 1943–1945 and 1946–1959. In the 1943–1945 period, the SMR for lung cancer was 204 (90% CI = 140, 290), while in the later period the lung cancer SMR was 105 (90% CI = 77, 140). Similar results were observed for all causes, all cancers, cancers of the rectum, nonmalignant respiratory diseases, and all injuries for which the SMRs were elevated during the wartime period but were not elevated after the war. Additional analyses considering workers hired in the period 1960–1979, during which plutonium-238 was processed at the facility, yielded little information. Generally, a strong healthy worker effect was observed and was attributed to the limited follow-up time and small numbers of deaths among this subcohort. 22 refs., 9 tabs.

15428 (LMF–129) **Inhalation Toxicology Research Institute annual report, October 1, 1989–September 30, 1990.** Thomassen, D.G.; Shyr, L.J.; Bechtold, W.E.; Bradley, P.L. (eds.). Lovelace Biomedical and Environmental Research Inst., Albuquerque, NM (USA). Inhalation Toxicology Research Inst. Dec 1990. 350p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76EV01013. Order Number DE91009419. Source: OSTI; NTIS; INIS; GPO Dep.

The mission of the Inhalation Toxicology Research Institute (ITRI) is to conduct basic and applied research concerning the human health impacts of inhaling airborne materials in the home, workplace and general environment. ITRI research programs have a strong basic science orientation with emphasis on the nature and behavior of airborne materials, the fundamental biology of the respiratory tract, the fate of inhaled materials and the mechanisms by which they cause disease, and the means by which data produced in the laboratory can be used to estimate risks to human health. Disorders of the respiratory tract continue to be a major health concern, and inhaled toxicants are thought to contribute substantially to respiratory morbidity. The papers in this report are organized along topical times, rather than by research programs, so that research within specific disciplines is more readily identified. The papers include summaries of research funded by DOE and non-DOE sources, to represent the full scope of ITRI activities. 123 figs., 80 tabs. (MHB)

15429 (PNL-SA–18907) **Accounting for bias and uncertainty resulting from dose measurement errors and other factors.** Gilbert, E.S. Pacific Northwest Lab., Richland, WA (USA). Mar 1991. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. (CONF-9103140–2: Workshop on the future of human radiation research, Schloss-Elmau (Germany, F.R.), 4-8 Mar 1991). Order Number DE91010028. Source: OSTI; NTIS; INIS; GPO Dep.

It is the aim of this paper to provide a general appreciation of the issues and problems involved in addressing dose measurement error in making inferences about the dose-response function, and to suggest approaches that might be taken in future analyses of data from radio-epidemiologic studies. The paper is not intended to provide a thoroughly rigorous statistical treatment of the subject, and some assumptions may not be explicitly stated. This paper begins with a general discussion of measurement error, followed by discussion of approaches for handling both random and systematic error. However, dose measurement error is only one of many sources of uncertainty that have not usually been fully accounted for in epidemiologic analyses. At the end of the paper, brief consideration is given to the general problem of quantifying uncertainties from several sources. 15 refs., 1 tab.

15430 (PNL-SA–18927) **Experimental studies on lung carcinogenesis and their relationship to future research on radiation-induced lung cancer in humans.** Cross, F.T. Pacific Northwest Lab., Richland, WA (USA). Mar 1991. 21p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. (CONF-9103140–1: Workshop on the future of human radiation research, Schloss-Elmau (Germany, F.R.), 4-8 Mar 1991). Order Number DE91009145. Source: OSTI; NTIS; INIS; GPO Dep.

The usefulness of experimental systems for studying human lung carcinogenesis lies in the ease of studying components of a total problem. As an example, the main thrust of attack on possible synergistic interactions between radiation, cigarette smoke, and other irritants must be by means of research on animals. Because animals can be serially sacrificed, a systematic search can be made for progressive lung changes, thereby improving our understanding of carcinogenesis. The mechanisms of radiation-induced carcinogenesis have not yet been delineated, but modern concepts of molecular and cellular biology and of radiation dosimetry are being increasingly applied to both in vivo and in vitro exposure to determine the mechanisms of radiation-induced carcinogenesis, to elucidate human data, and to aid in extrapolating experimental animal data to human exposures. In addition, biologically based mathematical models of carcinogenesis are being developed to describe the nature of the events leading to malignancy; they are also an essential part of a rational approach to quantitative cancer risk assessment. This paper summarizes recent experimental and

modeling data on radon-induced lung cancer and includes the confounding effects of cigarette-smoke exposures. The applicability of these data to understanding human exposures is emphasized, and areas of future research on human radiation-induced carcinogenesis are discussed. 7 refs., 2 figs., 3 tabs.

15431 (RERF-TR-6-90) **Radiosensitivity of skin fibroblasts from atomic bomb survivors with and without breast cancer.** Ban, Sadayuki (and others); Setlow, R.B.; Bender, M.A. Radiation Effects Research Foundation, Hiroshima (Japan). Nov 1990. 22p. Order Number DE91768051. Source: OSTI; NTIS (US Sales Only); INIS.

Fibroblasts were established in vitro from skin biopsies obtained from 55 women and one man with or without breast cancer and with or without exposure to radiation from the atomic bomb explosion in Hiroshima. The radiosensitivity of these cells was evaluated by clonogenic assays after exposure to X rays or to fission neutrons from a ^{252}Cf source. Data were fitted to a multitarget model, $S/S_0 = A[1-(1-e^{kD})^N]$, for both X-ray and neutron dose-survival curves. A single-hit model, $S/S_0 = Ae^{kD}$, fits the neutron dose-survival responses as well. There was no difference in the means or variances of radiosensitivity between exposed and nonexposed groups, or between patients with or without breast cancer. Hence, although the sample is not large, it provides no support for the hypothesis that A-bomb radiation preferentially induces breast cancer in women whose cells in vitro are sensitive to cell killing by radiation. (author).

The aim of this work was to investigate the sorption of the lanthanide promethium on bacteria and the distribution ratio, K_d, of the lanthanide between bacteria and water at different cell numbers, pH and lanthanide concentrations. There was a negative linear relationship between the number of cells and the amount of the Pm sorbed, and also between the number of cells and the K_d. The sorption decreased from a stable level at 90% as pH was raised above 7. There was a linear quantitative relation between the Pm concentration and the amount of Pm sorbed on the cells while the relation to K_d was relatively constant. The results indicate the sorption of trivalent actinides and lanthanides on bacteria to be a reversible surface adsorption. (orig.).

15433 (CONF-910659-4) **Ozone, acidic precipitation, and soil Mg effects on growth and nutrition of loblolly pine seedlings after three growing seasons.** Edwards, G.S. (Tennessee Valley Authority, Norris, TN (USA)); Kelly, J.M.; Edwards, N.T. Oak Ridge National Lab., TN (USA). [1991]. 15p. Sponsored by USDOE, Washington, DC (USA); Electric Power Research Inst., Palo Alto, CA (USA); Tennessee Valley Authority, Knoxville, TN (USA). DOE Contract AC05-84OR21400. From 84. annual meeting and exhibition of the Air and Waste Management Association (AWMA); Vancouver (Canada); 16-21 Jun 1991. Order Number DE91009556. Source: OSTI; NTIS; GPO Dep.

A study was initiated in 1987 to evaluate the impact of O_3, acidic precipitation, and soil Mg on the growth and nutrition of loblolly pine (Pinus taeda L.) seedlings. Thirty-six open top chambers equipped with a rainfall exclusion/addition system were utilized to administer three levels of O_3 (subambient, ambient, and twice ambient) and two rainfall pH levels (3.8 and 5.2) to seedlings growing in 24-L plastic pots containing soil having either 35 or 15 mg kg^{-1} of exchangeable Mg. Each chamber contained 36 pots, and each treatment combination was replicated six times for a total of 1296 individual pots. After three seasons, biomass of all seedling components was progressively reduced with increasing O_3 concentrations. Foliar nutrient leaching was not accelerated by increasing the acidity of precipitation from pH 5.2 to 3.8, and O_3 did not act to exacerbate foliar leaching. Also, foliar nutrient concentrations were not significantly affected by precipitation pH or O_3 treatments, and there was not accelerated soil leaching associated with chronic acidic precipitation. Differences in soil Mg treatments were reflected in soil solution and seedling Mg contents, but the 15 mg kg^{-1} soil Mg treatment was not sufficient to induce Mg deficiency in the seedlings. 24 refs., 6 figs., 2 tabs.

15434 (CONF-910659-8) **Indirect pathways as the primary source of human exposure to emissions from a Minnesota Municipal Waste Combustor.** Neely, B.L. (Oak Ridge National Lab., TN (USA)); Yambert, M.W.; Travis, C.C.; Hester, S.T.; Cleverly, D. Oak Ridge National Lab., TN (USA). [1991]. 11p. Sponsored by USDOE, Washington, DC (USA); Environmental Protection Agency, Washington, DC (USA). DOE Contract AC05-84OR21400. From 84. annual meeting and exhibition of the Air and Waste Management Association (AWMA); Vancouver (Canada); 16-21 Jun 1991. Order Number DE91009934. Source: OSTI; NTIS; GPO Dep.

Increasing problems of land disposal have forced many communities to actively consider incineration as a disposal alternative. With the growth of incineration arises the fundamental issue of the environmental impact of pollutants in combustor emissions. Municipal Waste Combustors (MWC) are known to release both metals and organics into the environment. In the past, most analyses of human health risk associated with atmospheric emissions from combustion sources have focused only on exposures resulting from direct inhalation. Recent studies, however, have linked elevated levels of pollutants in soils, lake sediments, and cow's milk to atmospheric transport and deposition of pollutants from combustion sources. These studies indicate that deposition of atmospherically emitted pollutants could result in indirect pathways of exposure for humans. Indirect exposure pathways include ingestion of contaminated drinking water, crops, fish, or even soil, although food ingestion is the primary route of indirect exposure. The purpose of the present study is to assess the extent to which indirect exposure pathways, particularly the terrestrial food chain, pose risks to human health. This will be accomplished by applying the U.S. EPA Methodology for Assessing Health Risks Associated with Indirect Exposure to Combustor Emissions to a MWC in Minnesota. This study will focus on the following toxic organic compounds and heavy metals: benzo(a)pyrene, dioxin, polychlorinated biphenyls, hexachlorobenzene, arsenic, cadmium, chromium, lead, mercury, and nickel. 33 refs., 8 tabs.

15435 (DOE/ER/60469-4) **Metabolism and toxicity of trace metals in the marine mussel, Mytilus edulis: Final report, July 1, 1986-January 30, 1990.** Roesijadi, G. Maryland Univ., Solomons, MD (USA). Chesapeake Biological Lab. [1990]. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-86ER60469. Order Number DE91009633. Source: OSTI; NTIS; GPO Dep.

Since trace metals such as mercury, cadmium, copper, and zinc can be released to the marine environment as a result of the operation of energy technologies, their potential effects on marine organisms need to be understood. Marine organisms have the capability to respond to metal exposure through acclimatization or adaptation to altered conditions. Mechanisms which may be involved in conferring such capabilities have also been identified. This research project investigated one of these mechanisms, the low molecular weight, metal-building protein MT, in relation to metal toxicity and acclimatization/adaptation. Specific topics included purification and characterization of molluscan MTs; examination of the kinetics of induction of these proteins in response to the above metals; the cellular disposition of metals in relation to induction; and metal-toxicity in relation to induction of metal-binding proteins. Studies were conducted on the bay mussel Mytilus edulis and the American oyster Crassostrea virginica. These efforts were planned to contribute to a better understanding of MTs and their relationship to toxic and adaptive responses in commercially- and ecologically-important marine animals. 23 refs.

15436 (ETDE-mf-1764476) **Advisory Research Committee on Forest Damage/Air Pollution. Third report.** Forschungsbeirat

Waldschaeden/Luftverunreinigungen der Bundesregierung und der Laender (Germany, F.R.). Nov 1989 607p. (In German). Order Number DE91764476. Source: OSTI; NTIS (US Sales Only).

In this report (Part B) the advisory committee gives a survey and a summary of today's state of knowledge and information. The following statements are given: There has not been a major recovery of the forests over the last three years. The degree of damage of deciduous trees has increased, damage of conifers has slightly decreased after the peak in 1985/86. The major outer symptoms of the 'new forest damage' are known from the past. What is new is the wide geographic expansion and their higher representation in a particular region and the fact that several types of trees are affected at once, within a few years. New forest damages are caused by a complex of abiotic and biotic factors. Anthropogeneous air-pollution from industrial plants, power stations, traffic, households and agriculture play a major role. Needle yellowing of spruces in the higher part of low mountain ranges are sufficiently explained by soil acidification caused by air pollutant deposition. Direct effects of air pollution act as additional stress factors. Other types of damage can be caused by direct impact of anthropogeneous air pollution on the tree's organs above ground, in this case the acidification of the soil could play the role of a predisposing stressor. The advisory council sees the drastic reduction of the emission of pollutants on a national and international level as a major precondition for the vitality of the forests. (orig./MG).

15437 (LA-UR-91-782) **Preliminary observations of lung injury produced by instillation of HF in acidic and neutral buffer.** Brainard, J.R.; Kinkead, S.A.; Kober, E.M.; Sebring, R.J.; Stavert, D.M.; Lehnert, B.E. Los Alamos National Lab., NM (USA). [1990]. 7p. Sponsored by Department of Defense, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9011164-2: 1990 scientific conference on chemical defense research, Aberdeen Proving Ground, MD (USA), 14-18 Nov 1990). Order Number DE91009941. Source: OSTI; NTIS; GPO Dep.

Perfluoroisobutylene (PFIB) is an extremely toxic organofluoride that can be produced during pyrolysis of tetrafluoroethylene polymers, including Teflon®. Inhalation of PFIB at very low concentrations causes acute lung injury, the hallmark of which is pulmonary edema. Several lines of evidence have suggested that hydrolysis of PFIB and resulting production of hydrofluoric acid may be responsible for pulmonary damage. In order to investigate the potential involvement of hydrofluoric acid in producing lung injury and its relationship to the mechanism of fluorocarbon toxicity, we have compared the pulmonary injury produced by PFIB, by dissociated (H^+ and F^-), and by undissociated (HF) hydrofluoric acid in the deep lung. By delivering hydrofluoric acid by intratracheal instillation in neutral buffer, we demonstrate that F^- produces no significant pulmonary injury as assessed by increased in lung weight and ultrastructural changes. Similarly, instillation of acid buffer alone demonstrated that H^+ did not produce detectable lung injury. Instillation of HF produced changes in lung weight and ultrastructure similar to those observed in PFIB-treated rats. However, the ultrastructural studies show that in contrast to inhalation of PFIB, which produces both endothelial and epithelial cell damage, instillation of HF appears to exert its injurious effects only upon epithelial cells. 9 refs., 1 fig.

15438 (PNL-SA-18965) **Rational redesign of the biodegradative enzyme cytochrome P450 cam: A progress report on engineering specificity for halogenated hydrocarbon substrates.** Ornstein, R.; Paulsen, M.; Bass, M.; Arnold, G. Pacific Northwest Lab., Richland, WA (USA). Mar 1991. 18p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. (CONF-9103114-1: In situ and on-site bioreclamation: an international symposium, San Diego, CA (USA), 19-21 Mar 1991). Order Number DE91010010. Source: OSTI; NTIS; INIS; GPO Dep.

Cytochromes P450, a superfamily of monooxygenase enzymes present in all kingdoms of living organisms, are very versatile with respect to substrate range and catalytic functionality. Many recalcitrant halogenated hydrocarbons, on DOE sites and throughout the nation, result in serious environmental impact. Cytochromes P450 have been shown to be catalytically capable of, at least partial, dehalogenation of some such compounds. Clearly, however, their active site stereochemistry and related functional components are not well suited for this role because the rates of dehalogenation are generally rather modest. The evolution of modified active site and access channel structures may proceed very slowly if multiple genetic changes are simultaneously required for enzyme adaptation. Since each mutational event is by itself a rare event, a basic premise of our research is that designing multiple changes into an enzyme may be more timely than waiting for them to occur biologically either via natural selection or under laboratory-controlled conditions. Starting with available high-resolution x-ray crystal structures, molecular modeling and molecular dynamics simulations have been used to probe the basic structure/function principles and conformational fluctuations of the biodegradative enzyme, cytochrome P450cam (camphor hydroxylase from Pseudomonas putida) and active site mutants, to provide the fundamental understanding necessary for rational engineering of the enzyme for modified substrate specificity. In the present paper, we review our progress to data, in the area of molecular dynamics simulations and active site redesign of P450cam. 36 refs., 2 figs.

15439 (RFP-4348) **Qualitative risk assessment as a remediation management tool.** Knutson, D.E. EG and G Rocky Flats, Inc., Golden, CO (USA). 14 Mar 1991. 180p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC34-90DP62349. Order Number DE91010415. Source: OSTI; NTIS; INIS; GPO Dep.

The technique used to complete this thesis utilizes existing NRC and EPA guidance on health-based risk to qualitatively prioritize preliminary assessments and provide a tool for the direction and management of remediation activities. This method is intended as a decision making tool to aid in prioritizing the remediation effort and manage the remedial investigation and feasibility study (RI/FS) process. It is not a replacement for the RI/FS. The methodology for qualitative risk assessment utilizes data gathered in preliminary assessments and calculates the health-based hazards and consequences from contaminants found at each individual location. The health-based qualitative risk indicated that #6 fuel oil, carbon tetrachloride, depleted uranium, and enriched uranium were the contaminants of major concern, in that order. Plutonium ranked approximately sixth in the contaminant of concern priority. 38 refs., 1 fig., 9 tabs.

15440 (UCRL-LR-104684) **Health hazard evaluation of the postcuring phase of graphite composite operations at the Lawrence Livermore National Laboratory, Livermore, California.** Kwan, Joseph Kai-cho. Lawrence Livermore National Lab., CA (USA). May 1990. 198p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010119. Source: OSTI; NTIS; GPO Dep.

Thesis. Submitted to University of California, Los Angeles.

In this project, particulates generated from various conventional and laser machining processes involving graphite composite materials were characterized. Airborne particulate were examined with both phase-contrast light microscopy and scanning electron microscopy to determine the physical size and morphology of the particles and to search for respirable-size graphite fibers. Chemical species generated from laser machining were isolated, identified, and quantified by gas chromatograph/mass spectrometry. Particulates collected on filters from air sampling of the machining process were chemically extracted and analyzed to determine if significant adsorption of the volatile species had occurred onto these particles. Portions of the extract were also evaluated for mutagenicity using the Ames test. The majority of the chemicals identified were polynuclear aromatic hydrocarbons. Toxicological review of these chemicals revealed toxicities ranging from irritation to carcinogenicity. Exposure limits have been established for only a few of the identified chemicals. At the source of generation, the concentrations of the carcinogens phenanthrene and pyrene were in excess of the allowable limits. Engineering control measures for various postcuring operations were discussed. Several policy issues, including exposure limit for graphite fibers and composite dust, regulation of laser machining operations, and treatment of graphite composite waste materials were addressed. 17 refs., 73 figs., 25 tabs.

5604 Other Environmental Pollutant Effects

15441 (LA-UR–91-905) **Gruneisen-stress induced ablation of biological tissue.** Dingus, R.S.; Scammon, R.J. Los Alamos National Lab., NM (USA). [1991]. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910123–19: OE/LASE '91: 4th Society of Photo-Optical Instrumentation Engineers (SPIE) international symposium, Los Angeles, CA (USA), 20-25 Jan 1991). Order Number DE91009957. Source: OSTI; NTIS; GPO Dep.

The objective of biomedical applications of lasers is frequently to remove tissue in a controlled manner. However, for ablation induced by thermal- or photo-decomposition, damage to surrounding tissue may be excessive in some instances. Tissue can also be ablated by a hydrodynamic process referred to as front surface spallation, in which a thin layer next to a free surface is heated to levels, below vaporization but, so rapidly that it cannot undergo thermal expansion during laser heating. This generates a stress pulse, which propagates away from the heated region, with an initial amplitude that can be calculated using the Grueneisen coefficient. As the pulse reflects from the free surface, a tensile tail can develop of sufficient amplitude, exceeding the material strength, that a layer will be spalled off, taking much of the laser-deposited energy with it. Because tissue is generally a low strength material, this process has the potential of producing controlled ablation with reduced damage to the remaining tissue. However, to achieve these conditions, the laser pulse length, absorption depth and fluence must be properly tailored. This paper presents hydrodynamic calculations and analytical modeling relating to both stress- and thermal-induced ablation as a function of laser and tissue properties to illustrate the potential benefits of stress induced ablation. Also, guidance is given for tailoring the exposure parameters to enhance front surface spallation. 8 refs., 6 figs.

15442 (ORNL/TM–11479) **Implementation plan for Air Force Environmental Noise Assessment Center.** Braid, R.B.; Reed, J.H. Oak Ridge National Lab., TN (USA). Feb 1991. 71p. Sponsored by Department of Defense, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010446. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This report details an implementation plan for establishing the Air Force Environmental Noise Assessment Center (AFENAC or the Center) to serve as the Air Force's single center for environmental noise assessment. AFENAC would be staffed by the Air Force's experts in applied environmental noise assessment and community planning and would be responsible for implementing various technologies throughout the Air Force to calculate expected noise levels from different aircraft operations. More specific AFENAC responsibilities are discussed in Sect. 2. AFENAC would be important in facilitating the Air Force's flying mission, in view of growing public concern over noise-related issues around air bases and beneath low altitude and supersonic airspaces as well as encroaching land uses around air bases. This implementation plan recommends how AFENAC could be established and operated to achieve its purpose. The plan reflects considerable interaction between the authors and a number of Air Force organizations including the program office, HQ AFESC/DEMP, and the associated staff of the AICUZ program; air staff personnel in HQ USAF/LEEV, HQ USAF/LEED, and HQ USAF/XOOSA; NSBIT; AAMRL/BBE; HQ AFSC/XTH; HQ AFLC/DEPR; and various personnel on the environmental community planning, and operations staffs at the Tactical Air Command, Air Force Logistics Command, Air National Guard, and Air Force Reserves. This implementation plan consists of four major sections. Section 2 sets forth the responsibilities of AFENAC. Section 3 discusses the organization, staffing, and funding of AFENAC. The noise assessment technologies and associated computer hardware that should be transferred to Air Force users through the auspices of AFENAC are detailed in Sect. 4, and Sect. 5 establishes a schedule and procedures for accomplishing these objectives. 3 figs., 7 tabs.

15443 (LA-UR–91-556) **On the measurement of wind speeds in tornadoes with a portable CW/FM-CW Doppler radar.** Bluestein, H.B. (Oklahoma Univ., Norman, OK (USA). School of Meteorology); Unruh, W.P. Los Alamos National Lab., NM (USA). [1991]. 15p. Sponsored by USDOE, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract W-7405-ENG-36. Grant ATM-8902594. (CONF-9104193–1: 3. tornado symposium, Norman, OK (USA), 2-5 Apr 1991). Order Number DE91008589. Source: OSTI; NTIS; GPO Dep.

Both the formation mechanism and structure of tornadoes are not yet well understood. The Doppler radar is probably the best remote-sensing instrument at present for determining the wind field in tornadoes. Although much has been learned about the nonsupercell tornado from relatively close range using Doppler radars at fixed sites, close-range measurements in supercell tornadoes are relatively few. Doppler radar can increase significantly the number of high-resolution, sub-cloud base measurements of both the tornado vortex and its parent vortex in supercells, with simultaneous visual documentation. The design details and operation of the CW/FM-CW Doppler radar developed at the Los Alamos National Laboratory and used by storm-intercept teams at the Univ. of Oklahoma are described elsewhere. The radar transmits 1 W at 3 cm, and can be switched back and forth between CW and FM-CW modes. In the FM-CW mode the sweep repetition frequency is 15.575 kHz and the sweep width 1.9 MHz; the corresponding maximum unambiguous range and velocity, and range resolution are 5 km, $\pm$ 115 m s^{-1}, and 78 m respectively. The bistatic antennas, which have half-power beamwidths of 5°, are easily pointed wit the aid of a boresighted VCR. FM-CW Data are recorded on the VCR, while voice documentation is recorded on the audio tape; video is recorded on another VCR. The radar and antennas are easily mounted on a tripod, and can be set up by three people in a minute or two. The purpose of this paper is to describe the signal processing techniques used to determine the Doppler spectrum in the FM-CW mode and a method of its interpretation in real time, and to present data gathered in a tornadic storm in 1990. 15 refs., 7 figs.

15444 (JAB–10733-TM3) **Overview of seismic signal conversion and processing operations.** Lum, P.K. Blume (John A.) and Associates Research Div., San Francisco, CA (USA). Mar 1991. 56p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC08-89NV10733. Order Number DE91009513. Source: OSTI; NTIS; GPO Dep.

URS/John A. Blume & Associates, Engineers (URS/Blume) is assigned by the US Department of Energy the responsibility of providing support to the safety program of the Nevada Operations Office (DOE-NV) with respect to documentation of seismic motion and evaluation of the effects of ground motion on structures and facilities. In this capacity, URS/Blume conducts a seismic documentation program with the primary objective of measuring, for analysis and evaluation, the ground structural response motion resulting from underground nuclear explosions (here called events), principally at the Nevada Test Site (NTS). This report gives a brief overview of the current operation and other related functions for processing seismic signals such as: basic information on the seismic recording systems and stations; a brief description of hardware, hardware configurations, and software; data formats; processing techniques used to convert seismic signals to computer compatible format; signal reduction and processing; and data controls. 12 refs., 7 figs., 3 tabs.

15445 (LBL–29817) **IRIS-SEIS users manual and installation guide: Version 1.3.0.** Okaya, D.; Karageorgi, E.; Daley, T.M. Lawrence Berkeley Lab., CA (USA). Nov 1990. 173p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91010230. Source: OSTI; NTIS; GPO Dep.

The IRIS-SEIS seismological processing package is a software extension to Sierra Geophysics' SIERRASEIS seismic data processing package. By using IRIS-SEIS, one can apply algorithms which are not provided within the original SIERRASEIS package. In

addition, IRIS-SEIS provides an environment so that users may add locally developed algorithms into the IRIS-SEIS/SIERRASEIS package. Some knowledge of FORTRAN and UNIX is required to add routines into IRIS-SEIS. IRIS-SEIS will not run as a stand-along software package but is written to be integrated with SIERRASEIS. The user must have a valid SIERRASEIS license in order to properly install and run IRIS-SEIS. IRIS-SEIS as presented here is supported on SUN/UNIX-based systems; references to operating system commands or to installation command files are based on the UNIX operating system. In addition to providing access to all original processing routines, IRIS-SEIS provides several capabilities which are not available to in SIERRASEIS. Most important, IRIS-SEIS separates SIERRASEIS routines from IRIS routines so that the IRIS- added routines do not corrupt the SIERRASEIS routines or infrastructure. Functionality available within IRIS-SEIS are user-definable headers, import of external data, utility processors to fix trace headers, and additional processing algorithms. This reference manual provides information which is needed to optimally use IRIS-SEIS. The first of three sections discusses the SIERRASEIS environment which provides a reference into which IRIS-SEIS and "LOCAL-SEIS" resides. The second section provides information on IRIS-SEIS (e.g., capabilities, installation procedures, how to run a job, etc.). The third section provides similar information on LOCAL-SEIS. Within the appendices, user documentation on each IRIS-SEIS processor is given. An appendix describes a set of C-language I/O utility routines for FORTRAN code; several IRIS-SEIS processors use this library.

15447 (SKB-TR–90-30) **The earthquakes of the Baltic shield.** Slunga, R. (Swedish National Defence Research Inst., Stockholm (Sweden)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Jun 1990. 21p. Order Number DE91624447. Source: OSTI; NTIS (US Sales Only); INIS.

More than 200 earthquakes in the Baltic Shield area in the size range ML 0.6-4.5 have been studied by dense regional seismic networks. The analysis includes focal depths, dynamic source parameters, and fault plane solutions. In southern Sweden a long part of the Protogene zone marks a change in the seismic activity. The focal depths indicate three crustal layers: Upper crust (0-18 km in southern Sweden, 0-13 km in northern Sweden), middle crust down to 35 km, and the quiet lower crust. The fault plane solutions show that strike-slip is dominating. Along the Tornquist line significant normal faulting occurs. The stresses released by the earthquakes show a remarkable consistency with a regional principle compression N60W. This indicates that plate-tectonic processes are more important than the land uplift. The spatial distribution is consistent with a model where the earthquakes are breakdowns of asperities on normally stably sliding faults. The aseismic sliding is estimated to be 2000 times more extensive than the seismic sliding. Southern Sweden is estimated to deform horizontally at a rate of 1 mm/year or more. (orig.).

15448 (STRIPA-TR–90-08) **Site characterization and validation - hydrochemical investigations. Stage 3.** Laaksoharju, M. (Royal Inst. of Tech., Stockholm (Sweden)). Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Feb 1990. 14p. Order Number DE91624448. Source: OSTI; NTIS (US Sales Only); INIS.

The objective for the Stage 3 hydrochemical investigations was to classify groundwater and to determine the different flow paths within the investigated SCV-site by using water analyses from the C and D boreholes. The water was divided into three classes shallow (A), mixed (B) and deep groundwater (C) based on Cl and HCO_3 concentration. The local geohydrological situation in the SCV-site can be divided into a disturbed situation and an undisturbed situation. Opening of the boreholes and smapling causes a disturbance of hydrochemical conditions. Three water types were found in the important water conductors, the GB and the GH zones. Shallow water (A-type) is flowing downwards while deep groundwater (C-type) is flowing upwards driven by the pumping of the mine. Where the two water types meet a zone of approximately 30 m thickness with mixed (B-type) water is formed. The flow situation is revealed by the geohydrological measurements. At undisturbed conditions shallow water (A-type) is flowing down in the investigated zones. The B and C water types are then found at a deeper level than during disturbed conditions. A regional model can be constructed based on the described chemical and geohydrological investigations. Shallow water from the top and deep groundwater from below are drawn towards the mine by the pumping. Where these waters meet mixed water is formed. (orig./HP).

15449 (STRIPA-TR–90-09) **Site characterization and validation - stress field in the SCV block and around the validation drift. Stage 3.** McKinnon, S. (JAA AB, Luleaa (Sweden)); Carr, P. Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). Apr 1990. 91p. Order Number DE91624449. Source: OSTI; NTIS (US Sales Only); INIS.

The results of previous stress measurement and stress modelling programmes carried out in the vicinity of the SCV block have been reviewed. Collectively, the results show that the stress field is influenced by the presence of the old mine excavations, and the measurements can be divided into near-field and far-field locations. The near-field measurements denote the extent and magnitude of the mining induced stresses while the far-field measurements reflect virgin conditions. Because of large scatter in the previous data, additional stress measurements were carried out using the CSIRO hollow inclusion cell. Combining all measurements, an estimate of the virgin stress tensor was made. Three-dimensional stress modelling was carried out using the program BEFE to determine the state of stress in the SCV block, and around the validation drift. This modelling showed that most of the SCV block is in a virgin stress field. Stresses acting on the fracture zones in the SCV block will be due only to the virgin stress field and induced stresses from the validation drift. (orig.).

15450 (STRIPA-TR–90-16) **The Stripa project. Annual report 1989.** Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden). May 1990. 132p. Order Number DE91624450. Source: OSTI; NTIS (US Sales Only); INIS.

Participating countries in the Phase 3 of the Stripa project are Canada, Finland, Japan, Sweden, Switzerland, United Kingdom and the United States. The research activities in this third phase of the Stripa project are carried out under two headings: Fracture flow and nuclide transport; and groundwater flow path sealing. Under the heading 'Fracture flow and nuclide transport' the main objectives are: to predict groundwater flow and nuclide transport in a specific unexplored volume of the Stripa granite and make a comparison with data from field measurements. The comparison is made by means of an integrated approach with existing site characterization tools and methods, particularly those developed under Phases 1 and 2, this programme is referred to as the 'Site characterization and validation' programme; to continue the development of site assessment methods and strategies and, where found appropriate, apply them in later stages of the integrated site characterization exercise outlined above. This programme is referred to as 'Improvement of site assessment methods and concepts'. Under the heading 'Groundwater flow path sealing' the principal objectives

are: to identify, select and evaluate sealing substances which promise to possess longterm chemical and mechanical stability and to demonstrate in field tests, by use of suitable methods and techniques, the effectiveness of such substances for the long-term sealing of groundwater flow paths in the Stripa granite. The total programme is referred to as 'Sealing of fractured rock'. (orig./HP).

15451 (YJT–89-19) **Diffusivity and electrical resistivity measurements in rock matrix around fractures.** Kumpulainen, H. (Valtion Teknillinen Tutkimuskeskus, Espoo (Finland). Reaktorilab.); Uusheimo, K. Teollisuuden Voima Oy (Finland). Dec 1989. 54p. Order Number DE91624451. Source: OSTI; NTIS (US Sales Only); INIS.

Microfracturing of rock matrix around permeable fractures was studied experimentally from drill core samples around major fractures. The methods used were diffusion measurements using a ^{36}Cl-tracer and electrical resistivity measurements. Rock samples were from the Romuvaara investigation site, the granite specimen around a partially filled carbonate fracture (KR4/333 m) and gneiss specimen around a slickenside fracture (KR1/645 m). A consistent difference of one to two orders of magnitude in the levels of the methods with regard to the effective diffusion coefficients for Cl^--ion was found, the electrical resistivity measurement giving higher values. On the basis of the diffusion measurements the diffusion porosities could be calculated but these remained one to two orders of magnitude lower than that expected for granitic rocks using the water saturation method. A possible reason for these differences could have been the low, in some cases 0.004 M NaC1-concentration in the diffusion experiments vs. the 1 M NaCl-concentration used in the electrical resistivity measurements. Due to the small number of specimens and cross sectional areas of only 2 cm^2, rock inhomogeneity effects were significant making the interpretation of the results somewhat troublesome. Porosities on fracture surfaces seemed to be higher than in the deeper, more intact rock matrix.

The importance of isotopic anomalies in refractory inclusions in meteorites is well established. Measurements of the anomalies using conventional mass spectrometry are often rendered difficult, however, by isobarically interfering isotopes: for example, ^{48}Ti and ^{48}Ca. Resonance ionization mass spectrometry (RIMS) can substantially reduce isobaric interferences in a number of systems. We have employed RIMS for the in situ detection of Ti atoms sputtered from pure Ti metal and from several terrestrial oxides containing both Ti and Ca. Tunable lasers were employed to resonantly ionize neutral Ti atoms. We have chosen Ti specifically because of the importance of Ti isotopic anomalies in cosmochemistry.

Washington Univ., Seattle, WA (USA). Dept. of Physics. Apr 1990. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AS06-88ER40423. (CERN-TH–5618/90). Order Number DE91009610. Source: OSTI; NTIS; INIS; GPO Dep.

We investigate the quantum cosmology of spatially homogeneous models with compact spatial sections admitting a u(2) isometry algebra. The metric ansatz in these models is that of Bianchi type IX with two scale factors set to be equal. We apply the Hartle-Hawking no-boundary path integral prescription and find the semi-classical contributions to the wave function. Exact formulae are obtainable for certain contributions and otherwise the limits of large and small anisotropy (for the pure vacuum case) and large spatial volume or small anisotropy (for the case with a positive cosmological constant) are considered. For the pure vacuum case we find no semiclassical components which would correspond to Lorentzian universes. For the case with a cosmological constant the Hartle-Hawking boundary conditions formally constrain one of the parameters in the Lorentzian solutions to be purely imaginary. Possible interpretations of this imaginary parameter are discussed. 27 refs.

15460 (DOE/ER/40423–19) **A new mechanism for neutralizing the cosmological constant.** Duncan, M.J. (Minnesota Univ., Minneapolis, MN (USA). Dept. of Physics); Jensen, L.G. Washington Univ., Seattle, WA (USA). Dept. of Physics. [1991]. 21p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AS06-88ER40423 ;AC02-83ER40105. (UMN-TH–908/90). Order Number DE91009790. Source: OSTI; NTIS; GPO Dep.

We propose a dynamical mechanism for neutralizing the cosmological constant in our universe. The analysis is wholly Lorentzian, unlike most other mechanisms which rely on the problematic Euclidean quantum gravity. Additionally, we do not have to assume any properties of a complete quantum gravity theory for our result. Quantum cosmology is an effective theory below the Planck scale,

and it suffices for the purpose of our demonstration. The vacuum energy from particle physics is many orders of magnitude to great to explain the measured smallness of the cosmological constant. Any generic field that allows us to shift the vacuum energy has the possibility of neutralizing it. However, such a field has an infinity of possible vacuum states, and we have to be in exactly the right one to achieve the cancellation. We show that when we third quantize a cosmology containing such a field in its particle physics sector we do have the possibility of selecting one vacuum over another. (The field we use for the sake of demonstration is a four-form.) The essential result of our paper is that the dominant vacuum state for the field is indeed the one that exactly cancels the particle physics vacuum energy. This means that a large universe, such as ours, has a vanishing cosmological constant. 25 refs.

15461 (FNAL/C–91/56-A) **Ultrahigh-energy particles from cosmic strings.** Bhattacharjee, P. (Chicago Univ., IL (USA). Astronomy and Astrophysics Center). Fermi National Accelerator Lab., Batavia, IL (USA). Feb 1991. 23p. Sponsored by USDOE, Washington, DC (USA); National Aeronautics and Space Administration, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract AC02-76CH03000. Grant 87-15412;Grant NAGW-1340. (CONF-9011188–1: Institute for Cosmic Ray Research (ICRR) international symposium on astrophysical aspects of the most energetic cosmic rays, Kofu (Japan), 26-29 Nov 1990). Order Number DE91009670. Source: OSTI; NTIS; INIS; GPO Dep.

The idea of production of ultrahigh-energy particles in the present universe due to annihilation or collapse of topological defects is discussed. Topological defects, formed in symmetry-breaking phase transitions in the early universe, can survive till today owing to their topological stability. However, under certain circumstances, topological defects may be physically destroyed. When topological defects are destroyed, the energy contained in the defects can be released in the form of massive gauge- and Higgs bosons of the underlying spontaneously broken gauge theory. Subsequent decay of these massive particles can give rise to energetic particles ranging up to an energy on the order of the mass of the original particles released from the defects. This may give us a "natural" mechanism of production of extremely energetic cosmic ray particles in the universe today, without the need for any acceleration mechanism. To illustrate this idea, I describe in detail the calculation of the expected ultrahigh-energy proton spectrum due to a specific process which involves collapse or multiple self-intersections of a class of closed cosmic string loops formed in a phase transition at a grand unification energy scale. I discuss the possibility that some of the highest-energy cosmic ray particles are of this origin. By comparing with the observational results on the ultrahigh-energy cosmic rays, we derive an upper limit to the average fraction of the total energy in all "primary" cosmic string loops that may be released in the form of particles due to collapse or multiple self-intersections of these loops. No nuclei such as α's or Fe's are in the spectrum. 43 refs., 3 figs.

15462 (IC–90/214) **Numerical simulation of a magnetic reconnection in the solar corona.** Wang Shui. International Centre for Theoretical Physics, Trieste (Italy). Aug 1990. 16p. Order Number DE91625352. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper, a kind of magnetic reconnection process caused by the local heating in the closed magnetic field region over the equator in the solar corona is discussed. At first, we use a method in combination with analytical and numerical methods to obtain a coronal magnetic configuration with X-type neutral point. Furthermore we solve numerically the magnetohydrodynamic equations by using the full-implicit continuous Eulerian scheme in the spherical coordinates. The results of numerical simulation show that three different processes of magnetic reconnection are existed. On the other hand, the upward plasma velocity is small when the effect of solar gravitational field is considered. Hence, we suggest that the magnetic reconnection caused by the pure resistivity tearing mode may be unimportant for the coronal mass ejections. (author). 37 refs, 2 figs.

The possibility of an alternative determination of the distance scale of the Universe and the Hubble constant based on the numerical analysis of the hierarchical nature of the large scale Universe (galaxies, clusters and superclusters) is proposed. The results of computer experiments performed by means of special numerical algorithms are represented. (author). 9 refs, 7 figs.

15464 (IC–90/317) **An alternative approach to the statistical investigation of the large-scale structure of the universe.** Gurzadyan, V.G. (International Centre for Theoretical Physics, Trieste (Italy)); Harutyunyan, V.V.; Kocharyan, A.A. International Centre for Theoretical Physics, Trieste (Italy) Oct 1990. 10p. Order Number DE91625369. Source: OSTI; NTIS (US Sales Only); INIS.

A method of statistical investigation of filamentary structure of the Universe is developed enabling one to analyze the information both on its spatial and dynamical properties simultaneously. The idea is based on construction of subsystems of a hierarchical system by means of special numerical algorithm. The strength of the method is demonstrated via computer experiments. (author). 5 refs, 5 figs.

15465 (IC–90/318) **Can the anisotropy of microwave background radiation be discovered at present?.** Gurzadyan, V.G. (International Centre for Theoretical Physics, Trieste (Italy)); Kocharyan, A.A. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 12p. Order Number DE91625370. Source: OSTI; NTIS (US Sales Only); INIS.

An effect leading to a decrease of perturbations of Microwave Background Radiation after recombination epoch is investigated. Behaviour of correlation functions for null geodesics flow enables one to evaluate the role of this effect based purely on geometrical and topological properties of the Universe. Possible anisotropy of MwB in open Friedmannian Universe is shown to decrease due to this effect to a level far below present experimental accuracy. The fractal nature of the large scale structure of the Universe is also discussed. (author). 20 refs.

15466 (ITEF–180-89) **Characteristics of shock waves in neutrino-thick medium of collapsing stars.** Imshennik, V.S.; Murzina, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 28p. (In Russian). Order Number DE91623795. Source: OSTI; NTIS (US Sales Only); INIS.

Hugoniot relations for shock waves in neutrino-thick medium of colapsing stars are formulated. The equations obtained are solved numerically for rather wide range of shock wave velocities ($D=(1,3,5)\times10^9$ cm/s) as well as for values of medium physical parameters against the shock wave front (temperature $T=(3,5,10)\times10^{-9}$K; medium degree $\Theta_0=n_n/n_p=10;100$; at $\rho_0=10^{11}$ g/cm^3 density).Presence of neutrino radiation is shown to result in matter essential deneutronization (up to Θ=10-30) at shock wave passage though contribution of leptonic component into the matter main characteristics (pressure, internal energy, temperature etc.) is rather small. 17 refs.; 3 figs.; 3 tabs.

15467 (ITEF–182-89) **On picture cross section of photons or ultrarelativistic uncharged particles by charged black hole of Reissnee-Nordstrem.** Zakharov, A.F. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. (In Russian). Order Number DE91623796. Source: OSTI; NTIS (US Sales Only); INIS.

Expression for capture cross section of photons (or uncharged ultrarelativistic particles) by spherically-symmetrical charged black hole was obtained. Known expressions for capture cross section of photons by Schwarzschild black hole and for capture cross section of photons by extremely charged black hole were derived by passing to the limit in mentioned expression. 7 refs.; 1 fig.

15468 (LAL–9020) **Search for macroscopic dark matter in the halo of the milky way through microlensing. A feasibility study.** Moniez, M. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. May 1990. 10p. (CONF-9003259–: 10. Moriond Astrophysics Meeting, Les Arcs (France), 4-10 Mar 1990). Order Number DE91767823. Source: OSTI; NTIS (US Sales Only).

The possibility of searching for non-visible massive compact objects in the galactic halo is discussed here. The discovery of such objects would solve the problem of the missing mass in the galaxies, and the experiments which investigate for weakly interacting particles assuming a diffuse cloud of dark matter would have to revise their limits. The non-discovery of these objects would exclude the last possibility left for baryonic dark matter, providing good evidence that the galactic halo has to be made of new particles. The description of the general-relativistic microlensing effect and its application to the search of massive compact objects are given here. A feasibility study shows that it is possible to monitor the luminosity of several million stars in the Large Magellanic Cloud with the required precision, in order to detect a possible microlensing phenomenon induced by heavy compact objects (10^{-4} - 10^{-1} solar mass units). A CCD-based experimental setup is described, which would make it possible to search for compact objects in the 10^{-6} - 10^{-4} solar mass unit domain.

15469 (NIIYaF-MGU–89-35-112) **Nonlinear plasma vortices in the Jupiter magnetosphere and radial diffusion in the radiation belt.** Kropotkin, A.P.; Mozzhukhina, A.R. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1989. 16p. (In Russian). Order Number DE91623793. Source: OSTI; NTIS (US Sales Only); INIS.

Within the framework of representations about two-dimensional vortex character of hydrodynamic turbulence in Jo torus linked with the development of rearrangement (flute) instability of torus plasma, non-linear equations describing such disturbances with regard to ionospheric conductivity effect are derived. Evaluations of chacteristic size of a vortex and value of electric field disturbances are found. Energetic particle radial diffusion coefficient in the Jo torus region is calculated, radial diffusion equation with model losses is solved. 23 refs.; 3 figs.

15470 (NORDITA–90/60-A(prepr.)) **The velocity dispersion gradients in spiral galaxies. Pt. 1: The galaxy and NGC 3198.** Antonuccio-Delogu, V. (Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark)). Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 45p. Order Number DE91623833. Source: OSTI; NTIS (US Sales Only); INIS.

An attempt to model the observed radial velocity dispersion profiles for our Galaxy and NGC 3198 by using exact solutions of Jeans equations is presented. No use is made of the epicyclic approximations, so our solutions can be applied quite generally to model the velocity dispersions in the plane of axisymmetric collisionless systems. Quite satisfactory fits are obtained by assuming that the isotropy parameter $\beta=\sigma_\Phi/\sigma_r$ of the stellar component is minimal. We then consider the possibility of constraining models of the mass distribution of a spiral by using the velocity dispersion profile. For our Galaxy, using the data of Lewis and Freeman (1989) and Woodley et al. (1977), no firm conclusions about the best fitting mass model can be reached, mainly because the data are incomplete and affected by observational uncertainties. For NGC 3198, although the solutions fit the observations quite well, the observational errors do not allow any strong constraint on the mass models. (orig.).

15471 (NORDITA–90/64-AP(prepr.)) **Cosmology of the standard model dilaton.** Enqvist, K. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 9p. Order Number DE91623850. Source: OSTI; NTIS (US Sales Only); INIS.

The cosmological evolution of the Standard Model dilaton-Higgs system is considered. We solve the dilaton equation of motion and find the condition for the thermalization and the freeze-out of dilatons. It is shown that the energy density in the subsequent dilaton oscillations is diluted by the large entropy production of the delayed electroweak phase transition. Hence the Standard Model dilaton is cosmologically safe. (orig.).

15472 (NORDITA–90/65-A(prepr.)) **The DBAQ G35-26.** Thejll, P. (Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark)); MacDonald, J.; Shipman, H.L. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 9p. Grant NASA NAG 5-972;NSF AST-87-20530. (CONF-9009358–: European white dwarf workshop, Toulouse (France), 7 Sep 1990). Order Number DE91623797. Source: OSTI; NTIS (US Sales Only); INIS.

The DQ G35-26 is spectroscopically analyzed and the results discussed in the context of dredge-up of carbon and the accretion of hydrogen. The best fit is T_{eff}=13,000K with firm limits between 11,000K and 14,000K, log(g) between 9.0 and 9.5. The hydrogen abundance is close to 1% by number and the carbon abundance close to 3%. All other elements have less than solar abundance. (orig.).

15473 (NORDITA–90/66-A(prepr.)) **The effective temperature of the DBV's, and the sensitivity of DB model atmospheres to input physics.** Thejll, P. (Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark)); Vennes, S.; Shipman, H.L. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 9p. Grant NASA NAG 5-348;NSF AST-87-20530. (CONF-9009358–: European white dwarf workshop, Toulouse (France), 7 Sep 1990). Order Number DE91623798. Source: QSTI; NTIS (US Sales Only); INIS.

A new grid of DB models is applied to the problem of the DBV temperatures and the DB gap. It is found that the DBV instability strip lies lower than thought before. This has consequences for the calibration of mixing-length theories and the reality of the DB gap. The DBV GD358 is discussed in detail. (orig.).

15474 (NORDITA–90/67-A(prepr.)) **Turbulent dynamo action in stars.** Brandenburg, A. (Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark)); Jennings, R.L.; Nordlund, A.; Rieutord, M.; Ruokolainen, J. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 13p. Order Number DE91623799. Source: OSTI; NTIS (US Sales Only); INIS.

The way in which dynamo action amplifies magnetic fields in the Sun, the Earth, and indeed galaxies is a classic problem of theoretical physics. Here we present the results of direct simulations of turbulent compressible hydromagnetic convection with a stable overshoot layer underneath (to model the Sun). We find spontaneous dynamo action followed by saturation, with most of the generated magnetic field appearing as coherent flux tubes in the vicinity of strong downdrafts. Here both the generation and destruction of magnetic field is at its most vigorous, and which process ultimately dominates depends on the sizes of the magnetic Reynolds and magnetic Prandtl numbers. (orig.).

15475 (NORDITA–90/68-AP(prepr.)) **Inert neutrinos in supernovae.** Kainulainen, K. (Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark)); Maalampi, J.; Peltoniemi, J.T. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 17p. Order Number DE91623800. Source: OSTI; NTIS (US Sales Only); INIS.

We study the constraints the observations of the supernova SN1987A impose on the mixing of the electron neutrino with an inert neutrino. A part of the electron neutrinos produced in the core of the star convert themselves into inert neutrinos as a result of the mixing. They would then escape the core and cool the star very rapdily in contrast to the observations. We show that due to matter effects the mixing or relatively light states propagating in the core is strongly suppressed, so that essentially no bounds exist if the mass of the inert neutrino is less than 200 eV. We also give a wave packet treatment of the propagation and the mixing of a neutrino state in matter, and find a condition for the ceasing of the oscillations due to the separation of the wave packets. (orig.).

15476 (NORDITA–90/73-A(prepr.)) **Chemical evolution of galaxies.** Pagel, B.E.J. Nordisk Inst. for Teoretisk Fysik (NORDITA), Copenhagen (Denmark). 1990. 11p. (CONF-9009325–: International Union of Pure and Applied Physics (IUPAP) conference on primordial nucleosynthesis and evolution of the early universe, Tokyo (Japan), 3-8 Sep 1990). Order Number DE91623834. Source: OSTI; NTIS (US Sales Only); INIS.

Initial conditions are probably set by results of Big Bang nucleosynthesis (BBNS) without intervening complications affecting the composition of visible matter so that extrapolation of observed abundances to BBNS products seems fairly secure. Primordial helium and deuterium abundances deduced in this way place upper and lower limits on baryonic density implying that both baryonic and non-baryonic dark matter exist and predicting no more than 3 neutrino flavours as recently confirmed in accelerator experiments. The validity of simple galactic chemical evolution models assumed

in extrapolating back to the Big Bang is examined in the light of the frequency distribution of iron or oxygen abundances in the Galactic halo, bulge and disk. (orig.).

15477 (UCRL-JC-105642) **Relativistic shock waves and the excitation of plerions.** Arons, J. (California Univ., Berkeley, CA (USA)); Gallant, Y.A.; Hoshino, Masahiro; Max, C.E.; Langdon, A.B. California Univ., Livermore, CA (USA). Inst. of Geophysics and Planetary Physics. 7 Jan 1991. 15p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9106119-1: IAU colloquium 128: the magnetospheric structure and emission mechanisms of radio pulsars', Logow (Poland), 18 Jun 1991). Order Number DE91007623. Source: OSTI; NTIS; GPO Dep.

The shock termination of a relativistic magnetohydrodynamic wind from a pulsar is the most interesting and viable model for the excitation of the synchrotron sources observed in plerionic supernova remnants. We have studied the structure of relativistic magnetosonic shock waves in plasmas composed purely of electrons and positrons, as well as those whose composition includes heavy ions as a minority constituent by number. We find that relativistic shocks in symmetric pair plasmas create fully thermalized distributions of particles and fields downstream. Therefore, such shocks are not good candidates for the mechanism which converts rotational energy lost from a pulsar into the nonthermal synchrotron emission observed in plerions. However, when the upstream wind contains heavy ions which are minority constituent by number density, but carry the bulk of the energy density, much of the energy of the shock goes into a downstream, nonthermal power law distribution of positrons with energy distribution $N(E)dE \propto E^{-s}$. In a specific model presented in some detail, s = 3. These characteristics are close to those assumed for the pairs in macroscopic MHD wind models of plerion excitation. The essential mechanism is collective synchrotron emission of left-handed extraordinary modes by the ions in the shock front at high harmonics of the ion cyclotron frequency, with the downstream positrons preferentially absorbing almost all of this radiation, mostly at their fundamental (relativistic) cyclotron frequencies. Possible applications to models of plerions and to constraints on theories of energy loss from pulsars are briefly outlines. 27 refs., 5 figs.

15478 (UCRL-JC-105643) **Magnetospheric structure of rotation powered pulsars.** Arons, J. (California Univ., Berkeley, CA (USA)). Lawrence Livermore National Lab., CA (USA). 7 Jan 1991. 42p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9106119-2: IAU colloquium 128: the magnetospheric structure and emission mechanisms of radio pulsars', Logow (Poland), 18 Jun 1991). Order Number DE91007622. Source: OSTI; NTIS; GPO Dep.

I survey recent theoretical work on the structure of the magnetospheres of rotation powered pulsars, within the observational constraints set by their observed spindown, their ability to power synchrotron nebulae and their ability to produce beamed collective radio emission, while putting only a small fraction of their energy into incoherent X- and gamma radiation. I find no single theory has yet given a consistent description of the magnetosphere, but I conclude that models based on a dense outflow of pairs from the polar caps, permeated by a lower density flow of heavy ions, are the most promising avenue for future research. 106 refs., 4 figs., 2 tabs.

15479 (KFTI-89-2) **Numerical simulation of transients in plasma near the variable potential negative charged body.** Pavlenko, N.G.; Bliokh, Yu.P.; Zejdlits, V.P.; Tkach, Yu.V.; Kharchenko, I.F. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 7p. (In Russian). Order Number DE91624481. Source: OSTI; NTIS (US Sales Only); INIS.

Theoretical study is made on plasma dynamics near space vehicle (SV) injecting ion beam at initial stage of active experiments in ionosphere. It is shown that occurrence of negative potential at SV leads to formation of positively charged layer adjoining its surface with size and oscillation amplitude depending on the value and potential increase velocity. 6 refs.; 5 figs.

15480 (NEI-NO-117) **Reconstruction of energetic electron spectra in the upper atmosphere: balloon observations of auroral X-rays coordinated with measurements from the EISCAT radar.** Olafsson, K.J. Bergen Univ. (Norway). Aug 1990 141p. Order Number DE91624482. Source: OSTI; NTIS (US Sales Only); INIS.

Energetic electron precipitation in the auroral zone has been studied using coordinated auroral X-ray measurements from balloons, altitude profiles of the ionospheric electron density measured by the EISCAT radar above the balloons, and cosmic noise absorption data from the Scandinavian riometer network. The data were obtained during the Coordinated EISCAT and Balloon Observations (CEBO) campaign in August 1984. The energy spectral variations of both the X-ray fluxes and the primary precipitating electrons were examined for two precipitation events in the morning sector. As far as reasonably can be concluded from observations of magnetic activity in the auroral zone, and from the temporal development of the energy spectra, the two precipitation events can be interpreted in the frame of present models of energetic electron precipitation on the mordning side of the auroral zone. 96 refs., 70 figs., 11 tabs.

15481 (PPPL-2742) **Theory of ultra-low-frequency magnetic pulsations in the earth's magnetosphere.** Chen, Liu. Princeton Univ., NJ (USA). Plasma Physics Lab. Mar 1991. 19p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91011104. Source: OSTI; NTIS; INIS; GPO Dep.

Long-period (T = 10-600 s) geomagnetic pulsations are known to be associated with magnetohydrodynamic (MHD) perturbations in the Earth's magnetosphere. Broadly speaking, there are two categories of excitation mechanisms. The first category corresponds to impulsive/external excitations, where MHD waves exhibit the stable discrete as well as continuous spectra. The second category corresponds to spontaneous/internal excitations, where MHD instabilities are excited either reactively or via wave-particle interactions. In this tutorial lecture, we briefly review theories concerning both categories of excitation mechanisms and compare theoretical predictions with available satellite observations. 20 refs.

15482 (RAL-90-073) **Electrons in the boundary layers near the dayside magnetopause.** Hall, D.S. (Rutherford Appleton Lab., Chilton (UK)); Chaloner, C.P.; Bryant, D.A.; Lepine, D.R.; Tritakis, V.P. Rutherford Appleton Lab., Chilton (UK). Oct 1990. 72p. Order Number DE91624483. Source: OSTI; NTIS (US Sales Only); INIS.

Accepted for publication in Journal of Geophysical Research.

Entry of heated solar-wind plasma into the magnetosphere is examined using electron distributions. In particular, the angular structure of the electron distributions is studied within the transition region separating the magnetosheath from the inner magnetosphere. The measurements suggest that electrons in the outer part of the transition region originate in the magnetosheath, whilst the population closer to the Earth consists of electrons from the magnetosphere combined with an energized magnetosheath component. This energized component contains "counterstreaming" electrons, which are confined to directions closely parallel and antiparallel to the magnetic field direction. The possibilities, that the energization of the counterstreaming electrons is cumulatively gained from either waves, electric fields perpendicular to the magnetic field, or quasi-Fermi acceleration, are discussed. It is not possible to identify the topology of the magnetic fields of the outer part of the region, but there is strong evidence that the inner part is on closed magnetic field lines, which map to the dayside auroral zone. The outer part of the transition region is a plasma depletion/magnetic-field compression layer. The structure of the transition region is similar to that surrounding flux transfer events, which leads to the deduction that the plasma and field signatures of flux transfer events may be the result of displacement of the transition region earthwards. Cases where the displacement is such that the field maximum of the depletion/compression region is encountered, may well explain "crater" flux transfer event signatures. (author).

15483 (CONF-9103146–1) **Electron correlation explored through electron spectrometry using synchrotron radiation.** Caldwell, C.D. (University of Central Florida, Orlando, FL (USA). Dept. of Physics); Whitfield, S.B.; Flemming, M.G.; Krause, M.O. Oak Ridge National Lab., TN (USA). [1991]. 9p. Sponsored by US-DOE, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract AC05-84OR21400. Grant PHY-8907286. From 3. US/Mexico atomic and molecular physics workshop; Mexico City (Mexico); 13-16 Mar 1991. Order Number DE91009917. Source: OSTI; NTIS; INIS; GPO Dep.

The development of synchrotron radiation facilities as a research tool has made possible experiments which provide new insights into the role which correlation plays in electron dynamics and atomic and molecular structure. Features such as autoionizing resonances, normal and resonant Auger decay modes, and ionization threshold structure have become visible in a wealth of new detail. Some aspects of this information drawn from recent experiments on the alkaline earth metals and the rare gases are presented. The potential for increased flux and resolution inherent in insertion device-based facilities like the Advanced Light Source should advance this understanding even further, and some future directions are suggested. 8 refs., 8 figs.

15484 (CONF-9103146–2) **Low-energy collisions of multiply charged ions with electrons, atoms and surfaces.** Phaneuf, R.A. (Oak Ridge National Lab., TN (USA)); Meyer, F.W.; Gregory, D.C.; Havener, C.C.; Zeijlmans van Emmichoven, P.A.; Overbury, S.H.; Zehner, D.M.; Dunn, G.H.; Thompson, J.S.; Waahlin, E.K.; Smith, A.C.H. Oak Ridge National Lab., TN (USA). [1991]. 15p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From 3. Results are presented from recent experiments at the ORNL-ECR Multicharged Ion Research Facility which have addressed low-energy interactions of multiply charged ions with electrons, hydrogen atoms and metal surfaces. The specific processes for which results are reported are electron-impact excitation, electron capture and ion neutralization. The objective of these studies is a more detailed understanding of the mechanisms which govern the interactions of multicharged ions at low (or near-threshold) collision energies. 18 refs., 8 figs.

Much of the work this year has been directed toward studies of charge exchange and ionization in single collisions of heavy ions with gaseous atoms and molecules. A study of the double ionization of He by high energy N^{7+} ions, which began last year, was extended up in energy to 40 MeV/amu. These measurements verified the deviations from the predictions of theory observed in our previous work and indicated that the energy required to reach the limiting value of the ratio of double-to-single ionization cross sections may be as high as 70 MeV/amu.

15486 (GSI–90-28) **Study of the reaction dynamics of heavy ion reactions via δ electron spectroscopy.** Stroth, J. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.); Mainz Univ. (Germany, F.R.). Inst. fuer Physik. Nov 1990. 126p. (In German). Order Number DE91764639. Source: OSTI; NTIS (US Sales Only); INIS.

In the present thesis measurements of δ electron spectra in the energy range 0.2 MeV < E_e < 3.5 MeV in elastic and deep inelastic nuclear collisions are described, which were performed at the heavy ion accelerator UNILAC of GSI in Darmstadt. For the collisional system U+Au at a uranium beam energy of 8.65 MeV/u as well as for U+Er and U+Pd at 6.1 MeV/u δ electron spectra from elastic and quasi-elastic scattering were compared with calculations of the coupled-channel model. In the system U+Au a very good agreement is found until down to impact parameters in the grazing range. Also in the lighter systems the agreement for long-range collisions is good, however the calculations subestimate the absolute value of the spectra by about 15% (U+Er) and 30% (U+Pd). The δ electron spectra for elastic scattering are also well described by the one-stage model. Regarding the extended charge distribution of the nuclei values for the mean binding energy of the electron of 600 keV (U+Au) and 340 keV (U+Er) are obtained. In the δ electron spectra for dissipative U+Au collisions the influence of an increasing time delay with growing energy loss is distinctly to be observed. In the interpretation of the spectra by means of phenomenological trajectories a maximal reaction time of 1.1×10^{-2} at a mean energy loss of 370 MeV is to be observed. The reaction times increase nearly linearly with the energy loss of the reaction. The explorative measurements of dissipative collisions at the Coulomb threshold in the system U+Pd at 6.1 MeV/u have shown that here the background contribution to the electron spectrum from conversion electrons can amount up to 50%. Because in the calculation of the background there still exist certain uncertainties concerning the multipolarity contributions of the γ radiation a reaction analysis was not yet possible here. (orig./HSI).

15487 (GSI–91-01(prepr.)) **Non-perturbative character of electron-positron pair production in relativistic heavy-ion collisions.** Rumrich, K. (Frankfurt Univ. (Germany, F.R.). Inst. fuer Theoretische Physik); Momberger, K.; Gruen, N.; Scheid, W.; Greiner, W.; Soff, G. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 12p. Order Number DE91764564. Source: OSTI; NTIS (US Sales Only); INIS.

Coupled-channel calculations for relativistic heavy-ion collisions are performed in order to determine the electromagnetic electron-positron pair production yield with subsequent capture of the electron into the K-shell of the target. We consider heavy projectiles impinging on Pb^{82+} and U^{92+} with small impact parameters at a bombarding energy of 1.2 GeV/u and 2 GeV/u, respectively. The dependence of the positron yields on the charge number of the projectile exhibits a strong non-perturbative feature. The corresponding result obtained within first-order perturbation theory is exceeded by about two orders of magnitude. (orig.).

15488 (IAE–4760-1) **Calculation aspects of the solution of one-dimensional nuclear Schroedinger equation with two-well numerical potential.** Gusev, V.V.; Potapov, S.G.; Sukhanov, L.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 32p. (In Russian). Order Number DE91623547. Source: OSTI; NTIS (US Sales Only); INIS.

As an example of quantum mechanical system He-M^+-He (M^+=H^+, μ^+), the calculation aspects of solution with finite-element method of one-dimensional nuclear Schroedinger equation with two- well numerical potential that is in given case calculated in Hartree-Fock-Roothaan approximation are discussed. The influence of the external and the internal sources of errors on the accuracy of calculation of relative spectral characteristics, i.e. the values of tunnelling splitting of levels and of the transition energies between them is investigated. For the problems of such type the checked accuracy of calculation of the values of tunnelling splitting of levels and of the transition energies between them that is defined by the relative accuracy of potential description is established. 17 refs.; 2 figs.; 11 tabs.

15489 (IAEA-NDS–58(Rev.2)) **ENDF/B-6 Photon Atomic Interaction Data Library: Summary documentation.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 29p. Order Number DE91623573. Source: OSTI; NTIS (US Sales Only); INIS.

The ENDF/B-6 version of the Photo-Atomic Interaction Data Library of the Livermore Evaluated Photon Data Library (EPDL) contains pair and triplet cross-sections, photoelectric cross-sections, atom form factors, coherent scattering cross-sections and some other data for all the elements from Z=1 to 100. The data library is available on magnetic tape costfree from the IAEA Nuclear Data Section. The library supersedes the earlier photo-atomic data

library by the US Radiation Shielding Information Center RSIC that was included in the data libraries ENDF/B-5 and JEF-1. (author). Refs, figs and tabs.

15490 (IC–90/300) **A study of the kinetic energy density functional for atoms.** Delchev, Ya.I. (International Centre for Theoretical Physics, Trieste (Italy)); Pavlov, R.L.; Petkov, I.Zh.; Velchev, Ch.I. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 26p. Order Number DE91625242. Source: OSTI; NTIS (US Sales Only); INIS.

This paper studies the rigorous kinetic energy density functional at the level of the Hartree-Fock method for closed electron shell atoms. The behaviour of the kinetic energy and its components, is analysed as the atomic number N increases. It is shown that the increments of the specific energies for two consecutive closed electron shells atoms depend distinctly on the electron configuration of the last electron shell. 35 refs, 1 fig., 4 tabs.

15491 (IC–90/308) **Some remarks about a role of a back recombination in RC primary processes.** Barvik, I. (International Centre for Theoretical Physics, Trieste (Italy)); Nedbal, L. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 23p. Order Number DE91625243. Source: OSTI; NTIS (US Sales Only); INIS.

We give a model of radical pair states in plant photosystem I and all possible kinds of excitation transitions between them. Our numerical modelling results in conclusions about a principal role of a back recombination in an explanation of new experimental results, namely biphasic time dependence of a delayed fluorescence. (author). 24 refs, 4 figs.

15492 (IC–90/309) **Coherent memory functions for finite systems: hexagonal photosynthetic unit.** Barvik, I. (International Centre for Theoretical Physics, Trieste (Italy)); Herman, P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 10p. Order Number DE91625244. Source: OSTI; NTIS (US Sales Only); INIS.

Coherent memory functions entering the Generalized Master Equation are presented for an hexagonal model of a photosynthetic unit. Influence of an energy heterogeneity on an exciton transfer is an antenna system as well as to a reaction center is investigated. (author). 9 refs, 3 figs.

15493 (IC–90/310) **Trapping effects in exciton motion in the framework of CTRW.** Barvik, I. (International Centre for Theoretical Physics, Trieste (Italy)); Herman, P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 12p. Order Number DE91625245. Source: OSTI; NTIS (US Sales Only); INIS.

Influence of a trap (sink) on an exciton transfer in molecular aggregates is investigated. Pausing time distribution functions $phi^{P}_{m}(t)$ and probability densities $Q_{mn}(t)$ on the continuous time random walk theory are calculated from memory functions entering the generalized master equations. The presence of the sink changes their analytical form. We used trimmer as example to show that only for large trapping rates pausing time distribution functions become nonnegative. Only in this case they could be used in Monte Carlo modelling. (author). 14 refs, 2 figs.

15494 (IC–90/311) **Effect of trapping on transport coherence.** Barvik, I. (International Centre for Theoretical Physics, Trieste (Italy)); Herman, P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 11p. Order Number DE91625246. Source: OSTI; NTIS (US Sales Only); INIS.

Influence of a trap (sink) on an exciton transfer in molecular aggregates is investigated. Memory functions entering the generalized master equations are calculated. The presence of the sink changes their analytical form. We used the sink in trimer as example to show that for large trapping rate parameters the rest of the system is decoupled from the sink. (author). 8 refs, 2 figs.

15495 (INIS-SU–233, pp. 10-16) **Calculation of energy of helium-like ion $2p^2\ ^3P$, ^1D, ^1S double-excited states and lithium-like ion $1s2p^2\ ^4P$ states.** Nadykto, B.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 38p. (In Russian). In *Theoretical and applied physics: Scientific-technical collection.* Order Number DE91003083. Source: OSTI; NTIS (US Sales Only); INIS.

Energy values of $2p^2\ ^3P$, ^1D, ^1S double-excited states of helium-like ions and $1s2p^2\ ^4P$ states of lithium-like ions, calculated using an improved Bohr atom model are presented. Calculation results show that electron interaction in $2p^2$ configuration does not depend on the presence and quantity of electrons in the external shell in 1s state. The calculated energy values for ions with Z=2-100 are presented. 8 refs.; 9 tabs.

15496 (IYaF–88-142) **Laser spectroscopy of atomic samarium.** Barkov, L.M.; Melik-Pashaev, D.A.; Zolotorev, M.S. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1988. 52p. Order Number DE91623549. Source: OSTI; NTIS (US Sales Only); INIS.

Samarium spectrum was studied with a purpose to find transitions to be used in experiments on parity nonconservation. Macaluso-Corbino effect - Faraday rotation near resonance was used for the search and study of spectral lines. We have identified previously unknown energy levels belonging to the $4f^6 6s^2\ ^5D$ term: 15914.55(3) cm^{-4} (J=1), 17864.29(3) cm^{-4} (J=2), 20195.76(3) cm^{-4} (J=3). M1-transitions to these levels from the levels of the ground $4f^6 6s^2\ ^7F$ term were observed. There are several peculiarities of these transitions which are due to the fact that they occut within an inner $4f^5$-shell, particularly, a very small presuure broadening by inert gases. 44 refs.; 17 figs.; 7 tabs.

15497 (IYaF–89-92) **Complex of programs for atomic physics problems. Self-consistent field method.** Dzyuba, V.A. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1989. 25p. (In Russian). Order Number DE91623550. Source: OSTI; NTIS (US Sales Only); INIS.

Realization of the Hartree-Fock-Sleiter and Hartree-Fock methods in the relativistic version is described. Their use permits to calculate energy levels, fine and superfine structure ranges, E1 and M1 amplitudes etc. for any atoms in the central-symmetric field approximation, as well as to find the whole orthonormalized set of states for discrete and continuous spectra, necessary for taking into account polarization and correlation effects according to the multi-particle perturbation theory. 21 refs.

15498 (LAL-RT–9004) **Short pulse photoemission from a dispenser cathode.** Bergeret, H.; Boussoukaya, M.; Chehab, R.; Leblond, B.; Le Duff, J. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Jun 1990. 9p. Contract 88-118-DRET. (CONF-9006242–: Workshop on short pulse high current cathodes, Bendor (France), 18-22 Jun 1990). Order Number DE91767808. Source: OSTI; NTIS (US Sales Only).

Pulsed photoemission in picosecond regime has been obtained from a standard thermionic dispenser cathode (W - Ba - Ca) at temperatures below measurable thermoemission threshold. A picosecond Nd: YAG mode locked laser has been used at both green and U.V. light. Micro-pulse charges up to 0.5 nC have been measured on a wideband coaxial pick up located behind the anode. They correspond to an electron saturation limit from an approximately 20 mm^2 illuminated cathode area with a surface field of 3 MV/m. The effective cathode efficiency at small laser energies, defined as the number of electron impinging the coaxial pick up divided by the number of photons impinging the cathode, is about 2.10^{-5}.

15499 (LAMP–90/3) **High resolution laser spectroscopy in cold supersonic molecular beams. Cooling, reduction of Doppler width and applications.** LAMP series report (Laser, Atomic and Molecular Physics). Mehdizadeh, E. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 22p. Order Number DE91623551. Source: OSTI; NTIS (US Sales Only); INIS.

The cooling of molecules during the adiabatic expansion of supersonic seeded molecular beams is reviewed and illustrated by the example of NO_2-molecules. The reduction of the Doppler-width by collimation of the beam and the cooling to low rotational temperatures brings a significant simplification of the complex NO_2-absorption spectrum and allows its assignment. The measured rotational temperature was T_{rot} = 10K. Some examples from our work illustrate this promising technique of high resolution laser spectroscopy in cold beams. (author). 17 refs, 4 figs.

15500 (LIYaF–1474) **Quantum chemical simulation of hydrogen like states in silicon and diamond.** Gel'fand, R.B. (AN Belorusskoj SSR, Minsk (Byelorussian SSR). Inst. Fiziki Tverdogo Tela i Poluprovodnikov); Gordeev, V.A.; Gorelkinskij, Yu.V. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 36p. (In Russian). Order Number DE91623552. Source: OSTI; NTIS (US Sales Only); INIS.

The quantum-chemical methods of the complete neglect of differential overlap (CNDO) and intermediate neglect of differential overlap (INDO) are used to calculate the electronic structure of atomic hydrogen (muonium) located at different interstital sites of the silicon and diamond crystal lattices. The electronic g- and hyperfine interaction tensors of the impure atom are determined.The results obtained are compared with the experimental data on the 'normal' (Mu') and 'anomalous' (Mu^*) muonium centers as well as on the hydrogen-bearing Si-AA9 EPR center which is a hydrogen-bearing analogue of (Mu^*). The most likely localization sites for hydrogen (muonium) atoms in silicon and diamond crystals are established. 22 refs.

15501 (LIYaF–1489) **K-shell photoionization cross sections.** Band, I.M. (AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki); Trzhaskovskaya, M.B.; Verner, D.A.; Yakovlev, D.G. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 26p. (In Russian). Order Number DE91623553. Source: OSTI; NTIS (US Sales Only); INIS.

Simple analytic formulae are proposed to fit the theoretical K-shell photoionization cross sections of atoms and ions. The numerical parameters which enter these formulae are presented for atoms and ions with charge number Z=2 and $6 \leq Z \leq 26$. 11 refs.; 2 figs.

15502 (NIFS-DATA–8) **Excitation collision strengths, cross sections and rate coefficients for OV, SIXI, FeXXIII, MoXXXIX by electron impact ($1s^2 2s^2$-$1s^2 2s 2p_1 s^2 2p^2$ transitions).** Safronova, U.I.; Kato, T.; Masai, K.; Vainshtein, L.A.; Shlyapzeva, A.S. National Inst. for Fusion Science, Nagoya (Japan). Dec 1990. 93p. Order Number DE91767978. Source: OSTI; NTIS (US Sales Only); INIS.

Excitation collision strengths, cross sections and rate coefficients by electron impact are calculated for the transitions among the $1s^2 2s^2$, $1s^2 2p^2$, $1s^2 2s 2p$ levels of Be-like system of OV, SiXI, FeXXIII and MoXXXIX ions by Coulomb-Born approximation with exchange including relativistic effect and configuration interactions. The theoretical method for calculation is described and the results are compared with the previous calculations. Numerical data and comparison are presented in Tables as well as in Figures. Two kinds of fitting formulae for cross sections and rate coefficients are discussed. (author).

15503 (ORNL/FTR–3875) **[Few-body problems, electron-correlation effects, and beyond]: Foreign trip report, March 13, 1991–March 17, 1991.** Phaneuf, R.A. Oak Ridge National Lab., TN (USA). 1 Apr 1991. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010030. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The Third US-Mexico Cooperative Joint Symposium on Atomic and Molecular Physics drew 50 participants from Mexico, the United States, and Europe. The theme of the symposium/workshop was "Few-body problems, electron-correlation effects, and beyond." Among the 42 invited speakers were many distinguished atomic physicists who presented recent research results and perspectives in a workshop atmosphere. A well-balanced program covered most aspects of atomic and molecular collision physics. Particular excitement was generated by new experimental results reported for laser-stimulated radiative recombination of electrons with protons, and by theoretical results on the role of "scarred" wavefunctions as manifestations of classical chaos in photoionization.

15504 (ORNL/FTR–3876) **[Linac-based "Slow Positron Factory" facility]: Foreign trip report, February 24, 1991–March 10, 1991.** Hulett, L.D. Jr. Oak Ridge National Lab., TN (USA). 18 Mar 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010241. Source: OSTI; NTIS; GPO Dep.

The Japan Atomic Energy Research Institute (JAERI) is considering the building of a linac-based "Slow Positron Factory" facility at the Takasaki Radiation Chemistry Research Establishment. An expenditure of $130M is anticipated. The facility will be similar to the ORELA slow positron facility at ORNL. Dr. S. Okada from Takasaki has visited ORNL twice for consulting. The main purpose of the Tokyo workshop was to allow JAERI headquarters to evaluate the field of slow positron applications and decide whether or not to commit funding. At this workshop the traveler presented the honorary invited lecture on linac-based slow positron sources and their applications. The positron experts meeting at Tsukuba University was a technical dialogue researchers on positron applications. It is noteworthy that Japanese industries such as Hitachi and NEC were heavily represented at this meeting. They are making use of positron technology and are sponsoring research. At the Takasaki Radiation Chemistry Research Establishment the traveler visited the site of the future "Positron Factory."

15505 (PPPL–2748) **Quenching of Einstein A-Coefficients in plasmas and lasers.** Suckewer, S. (Princeton Univ., NJ (USA). Plasma Physics Lab.). Princeton Univ., NJ (USA). Plasma Physics Lab. Mar 1991. 18p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91009849. Source: OSTI; NTIS; INIS; GPO Dep.

The coefficient of spontaneous emission (Einstein A-coefficient) is considered to be one of the basic constants of a given transition in atom or ion. The formula for the Einstein A-coefficient was derived in the pioneering works of Weisskopf and Wigner (WW) based on Dirac's theory of light. More recently, however, it was noted in several papers that the rate of spontaneous radiative decay can deviate significantly from the WW expression in certain conditions, for example in a laser cavity. A different type of change in A- coefficients was inferred from measurements of changes in the intensity branching ratio of spectral lines in a plasma. A change of branching ratio of up to a factor of 10 was observed in CIV for 3p-3s (580.1–581.2nm) and 3p-2s (31.2-nm) transitions when the electron density changed from approximately $N_e \approx 1 \times 10^{18}$ to 5×10^{18} cm^{-3}. This effect was also observed in CIII and NV. An initial theoretical approach to the problem based on the integration of the Schroedinger equation with the ion Coulomb potential modified by the electron cloud within the Debye radius was unsuccessfully in predicting the experimental observations. The effect of quenching of spontaneous emission coefficients was observed also in an Ar-ion laser as a function of the intracavity power density (photon density) for lines originating from the same upper level as the lasing line. Measurements of these line profiles absorption for different lasing conditions and related discussions are also presented. 14 refs., 6 figs.

15506 (RAL–89-136) **Intermultiplet transitions using neutron spectroscopy.** Osborn, R. (Rutherford Appleton Lab., Chilton (UK)); Lovesey, S.W.; Taylor, A.D.; Balcar, E. Rutherford Appleton Lab., Chilton (UK). Dec 1989. 125p. Order Number DE91623574. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron inelastic scattering is used here to attempt to obtain optical spectra for lanthanide metals and compounds. Intermultiplet spectroscopy provides information about transitions from different electronic configurations and hybridisation of the 4f shell. This report discusses the relatively limited contribution that neutron scattering has played in intermultiplet spectroscopy, and covers spin-orbit transitions and coulomb transitions Racah algebra is developed in calculating the scattering cross sections. (author).

15507 (RAL–90-081) **Empirical determination of effective charges in electron impact ionisation.** Whelan, C.T. (Rutherford Appleton Lab., Chilton (UK)); Walters, H.R.J.; Dreizler, R.M. Rutherford Appleton Lab., Chilton (UK). Nov 1990. 12p. Order Number DE91623575. Source: OSTI; NTIS (US Sales Only); INIS.

The first order effective charge description of the electron impact ionisation of H(1s) is considered. The effect of imposing the Peterkop relation on the charges occuring therein is discussed. A special case corresponding to high energy asymmetric geometry is considered and values for the effective charges deduced by comparison with the most accurate available theoretical and experimental data. Empirical prescriptions are proposed for the charges and applied to several different cases. (author).

15508 (UCRL-ID–106591) **Magnetic substates populated by double electron capture in slow ion atom collisions.** Randall, K.L. Lawrence Livermore National Lab., CA (USA). 13 Dec 1990. 75p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010122. Source: OSTI; NTIS; GPO Dep.

The work presented here is the first measurement of the angular distribution of Auger electrons following double electron capture by a beam of slow highly charged ions. From this, relative cross sections for the population of individual M_L substates were determined.

15509 (CONF-9105137–2) **Monte Carlo simulation of supercritical solutions in the grand canonical ensemble.** Shah, V.M. (Tennessee Univ., Knoxville, TN (USA). Dept. of Chemical Engineering); Bienkowski, P.R.; Cochran, H.D. Oak Ridge National Lab., TN (USA). [1991]. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From 2. international conference on supercritical fluids; Boston, MA (USA); 20-22 May 1991. Order Number DE91009152. Source: OSTI; NTIS; GPO Dep.

Molecular simulations have been undertaken of pure, repulsive, and attractive supercritical Lennard-Jones solutions using the Monte Carlo technique in the grand canonical ensemble for the same systems and states used in a previous study by the molecular dynamics technique in the canonical ensemble. The pure supercritical fluid exhibited structure which differed somewhat between the canonical and grand canonical simulations at distances of three or four diameters from a central particle. The grand canonical simulation was shown to have chemical potential in agreement with the calculations from the equation of state and to be thermodynamically consistent. Simulations of the repulsive mixture in the grand canonical ensemble were characterized by substantial statistical scatter so that the special capabilities of the grand canonical simulation – fluctuation analysis and thermodynamic consistency testing – could not be employed. The attractive supercritical mixture studied previously was found to be within the two-phase region when studied in the grand canonical ensemble. The only previous simulation of mixtures in the grand canonical ensemble did not attempt to apply the fluctuation analysis or the thermodynamic consistency test; so, the negative results of this work are new. 8 refs., 3 figs., 4 tabs.

Source: OSTI; NTIS; GPO Dep.

The present state-of-the-art models in two-phase flow (e.g., RELAP5, TRAC, etc.) are based on the fully-averaged two-fluid concept. This paper describes a new particle-fluid model that is intermediate between the numerically intractable local instant description and the fully-averaged two-fluid model. This new model uses a Lagrangian description for the dispersed phases, bubbles and droplets, and an Eulerian description for the continuous phases, liquid and vapor. The model described in this paper is limited to dispersed bubbles in a continuous phase. Plans are to expand the model to include two dispersed phases and two continuous phases. Interaction between each dispersed phase and its surrounding continuous phase takes place through void fraction coupling as well as interface mass, momentum, and energy transfer. Fully-averaged two-fluid models use correlations for determining flow regime transitions. One motivation for this particle-fluid model is to be able to predict these flow regime transitions as well as being able to use more mechanistic models for dispersed phase coalescence, breakup, wakes, etc. Graphical results from a subcooled boiling stream-water simulation using the particle-fluid model are shown. Currently, this subcooled boiling simulation as well as air-water and liquid-vapor Freon simulations are being compared with experimental data. 8 refs., 1 fig.

15512 (LA-UR–90-3383) **A three-dimensional free-Lagrange code for multimaterial flow simulations.** Sahota, M.S.; Trease, H.E. Los Alamos National Lab., NM (USA). [1991]. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910664–1: 4. ASME-JSME international symposium on liquid-solid flow, Portland, OR (USA), 23-26 Jun 1991). Order Number DE91002309. Source: OSTI; NTIS; GPO Dep.

A time-dependent, three-dimensional, compressible, multicomponent, free-Lagrange code is currently under development at the Los Alamos National Laboratory. The code uses fixed-mass particles (called mass points) surrounded by median Lagrangian cells. These mass points are free to change their nearest-neighbor connections as they follow the fluid motion, which ensures accuracy in the differencing of equations and allows us to simulate flows with extreme distortions. All variables, including velocity, are mass-point centered and time-advancement is performed using the finite-volume technique. The code conserves mass, momentum, and energy exactly, except in some pathological situations. We utilize the Voronoi connections algorithm for Delaunay tetrahedralization of the median mesh during mesh generations and mesh reconnections. The code is highly vectorized and utilizes all eight processors on a Cray YMP. Also, we have recently mapped the code to the massively parallel Connection Machine. Some of the applications for the free-Lagrange method include atomspheric and ocean-circulation models, oil-reservoir and high-velocity impact simulations. These applications are in addition to our standard model problems of high-explosive driven shock-wave problems that involve high degree of deformation, shear flow, and turbulent mixing. 9 refs., 12 figs.

15513 (LA-UR–91-0911) **Hybrid codes: Methods and applications.** Winske, D. (Los Alamos National Lab., NM (USA)); Omidi, N. Los Alamos National Lab., NM (USA). [1991]. 74p. Sponsored by USDOE, Washington, DC (USA); National Aeronautics and Space Administration, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9104109–3: 4. international school for space simulation, Nara (Japan), 1-5 Apr 1991). Order Number DE91009959. Source: OSTI; NTIS; GPO Dep.

In this chapter we discuss "hybrid" algorithms used in the study of low frequency electromagnetic phenomena, where one or more ion species are treated kinetically via standard PIC methods used in particle codes and the electrons are treated as a single charge neutralizing massless fluid. Other types of hybrid models are possible, as discussed in Winske and Quest, but hybrid codes with particle ions and massless fluid electrons have become the most common for simulating space plasma physics phenomena in the last decade, as we discuss in this paper.

15514 (LA-UR–91-958) **Lattice gas simulations of one and two-phase fluid flows using the Connection Machine-2.** Chen, S. (Los Alamos National Lab., NM (USA)); Doolen, G.D.; Eggert, K.; Grunau, D.; Loh, E.Y. Los Alamos National Lab., NM (USA). [1990]. 18p. Sponsored by Department of Defense, Washington, DC (USA); USDOE, Washington, DC (USA); National Aeronautics and Space Administration, Washington, DC (USA). DOE Contract W-7405-ENG-36. Grant DPP8850;Grant NAGW1648. (CONF-9009362–1: Discrete models of fluid dynamics conference, Coimbra (Portugal), Sep 1990). Order Number DE91009962. Source: OSTI; NTIS; GPO Dep.

In this paper, we report recent lattice gas simulations for single-phase and two-phase flows for two dimensional problems using the Connection Machine-2. For the single-phase fluid problem, we use the standard 7-bit lattice gas model with the maximum collision rules. The velocity and vorticity field of the Kelvin-Helmholtz instability is studied. It is shown that the lattice gas method preserves

the main properties of the flow patterns observed in other numerical simulations. Using colored particles and holes, the lattice gas method is extended to simulate immiscible fluids with adjustable surface tension, using a purely local collision scheme. The locality of this model allows us to implement a very fast and parallel algorithm on the Connection Machine-2. Because this new model correctly describes short-range particle-particle interactions between liquids and also particle-solid interactions between the fluid and the wall, cohesion and wettability can be simulated. Applications of the current model to several physical systems including spinodal decomposition, Rayleigh-Taylor flows and wettability in two-phase flows through porous media are discussed. 15 refs., 10 figs.

15515 (SAND–90-1850C) **Developing natural convection in a fluid layer with localized heating and large viscosity variation.** Hickox, C.E.; Chu, Tze Yao. Sandia National Labs., Albuquerque, NM (USA). [1991]. 25p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-910684–2: 1. ASME/JSME fluids engineering conference, Portland, OR (USA), 23-26 Jun 1991). Order Number DE91005240. Source: OSTI; NTIS; GPO Dep.

Numerical simulations and laboratory experiments are used to elucidate aspects of transient natural convection in a magma chamber. The magma chamber is modeled as a horizontal fluid layer confined within an enclosure of square planform and heated from below by a strip heater centered on the lower boundary of the enclosure. The width of the strip heater and the depth of the fluid layer are one-fourth of the layer width. Corn syrup is used as the working fluid in order to approximate the large viscosity variation with temperature and the large Prandtl number typical of magma. The quiescent, uniform, fluid layer is subjected to instantaneous heating from the strip heater producing a transient flow which is dominated by two counter-rotating convective cells. Experimentally determined characteristics of the developing flow are compared with numerical simulations carried out with a finite element computer program. The results of numerical simulations are in essential agreement with experimental data. Differences between the numerical simulations and experimental measurements are conjectured to result from non-ideal effects present in the experiment which are difficult to represent accurately in a numerical simulation.

15516 (SAND–90-2541C) **Measurements of passive-scalar spectra for grid turbulence using a nonlinear optical technique.** O'Hern, T.J. (Sandia National Labs., Albuquerque, NM (USA)); Torczynski, J.R.; Neal, D.R.; Shagam, R.N.; Robey, H.F. Sandia National Labs., Albuquerque, NM (USA). [1991]. 18p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-910684–1: 1. ASME/JSME fluids engineering conference, Portland, OR (USA), 23-26 Jun 1991). Order Number DE91005310. Source: OSTI; NTIS; GPO Dep.

A nonlinear optical technique has been applied to grid turbulence measurements. A laser beam passing through a turbulent region acquires phase perturbations related to the density perturbations it encounters. If the laser beam is then passed through a crystal of barium titanate ($BaTiO_3$), a photorefractive nonlinear optical material, the small-amplitude perturbations to the beam are passed but the large-amplitude unperturbed portion of the beam is deflected away from the beam path. An optical Fourier transform of the perturbations performed by a lens yields the two-dimensional density-perturbation (passive-scalar) spectrum at the lens focal plane or, alternatively, a photorefractive schlieren photograph at the lens image plane. As a test application for this technique, a system was assembled to study the downstream evolution of the density-perturbation spectrum in grid turbulence produced by an electrically heated screen spanning the test section of a wind tunnel. Near the screen, the spectrum is found to consist primarily of large-amplitude peaks at the fundamental and the first few harmonics of the screen-wake spatial frequency. As expected, these amplitudes are observed to decay rapidly in the downstream direction. 8 refs., 12 figs.

15517 (SAND–90-3227C) **Benchmarking numerical predictions with force and moment measurements on slender, supercavitating bodies.** Hailey, C.E.; Clark, E.L.; Cole, J.K. Sandia National Labs., Albuquerque, NM (USA). [1991]. 18p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-9106114–1: 1991 cavitation and multiphase flow conference, Portland, OR (USA), 23-26 Jun 1991). Order Number DE91007066. Source: OSTI; NTIS; GPO Dep.

High-speed water-entry is a very complex, dynamic process. As a first attempt at modeling the process, a numerical solution was developed at Sandia National Laboratories for predicting the forces and moments acting on a body with a steady supercavity, that is, a cavity which extends beyond the base of the body. The solution is limited to supercavities on slender, axisymmetric bodies at small angles of attack. Limited data were available with which to benchmark the axial force predictions at zero angle of attack. Even less data were available with which to benchmark the pitching moment and normal force predictions at nonzero angles of attack. A water tunnel test was conducted to obtain force and moment data on a slender shape. This test produced limited data because of waterproofing problems with the balance. A new balance was designed and a second water tunnel test was conducted at Tracor Hydronautics, Inc. This paper describes the numerical solution, the experimental equipment and test procedures, and the results of the second test. 8 refs., 11 figs.

15518 (UCRL-ID–106618) **A numerical model of particulate transport.** Cloutman, L.D. Lawrence Livermore National Lab., CA (USA). Mar 1991. 26p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010120. Source: OSTI; NTIS; GPO Dep.

The transport of particulate matter occurs in a variety of physical systems. We describe a statistical model of particulate transport that can be used to simulate these systems. The physical particles are represented by a set of computational packets of particles. The initial particle size, velocity, and location for each packet is chosen by randomly sampling size, velocity, and source region distributions. The dynamics of the individual packets are calculated in detail by integrating their equations of motion, including momentum and energy exchange with the fluid. Numerical examples are provided. 16 refs., 11 figs., 1 tab.

15519 (UCRL-JC–105182) **Hairpin vortices, singularities, and transition to turbulence in three-dimensional shear flows.** Marcus, D.L.; Bell, J.B. Lawrence Livermore National Lab., CA (USA). Oct 1990. 17p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-910651–1: 10. AIAA computational fluid dynamics conference in conjunction with the 22nd AIAA fluid dynamics, plasma dynamics and lasers conference and the 26th AIIA thermophysics conference, Honolulu, HI (USA), 24-26 Jun 1991). Order Number DE91002792. Source: OSTI; NTIS; GPO Dep.

We study the evolution of a transversely perturbed co-flowing jet in a triply periodic box by means of a second-order projection method for the three-dimensional Euler equations. Advection-diffusion equations are solved without enforcing the incompressibility constraint, and the resulting velocity field is projected onto a divergence-free subspace. The method is unique in its treatment of nonlinear advection; it incorporates a second-order, upstream-centered differencing procedure that provides a robust treatment of nonsmooth data without introducing spurious oscillations, even in the limit of vanishing viscosity. The flow is visualized by following the evolution of a tracer function initialized on the surface of the tube. We also carry out a volume rendering of the vorticity field with an opacity profile and color map which shows that hairpin vortices abound and that vorticity intensifies greatly at their tips. We present strong numerical evidence that the vorticity becomes unbounded, and show that accompanying the onset of the singularity is a decay in the mean kinetic energy. Following the onset, a Kolmogorov ($k^{-5/3}$) range emerges in the energy spectrum.

15520 (UCRL-JC–105183) **Numerical simulation of a viscous vortex ring interaction with a density interface.** Marcus, D.L.; Bell, J.B. Lawrence Livermore National Lab., CA (USA). Oct 1990. 18p. Sponsored by Department of Defense, Washington, DC (USA); USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-910651–2: 10. AIAA computational fluid dynamics conference in conjunction with the 22nd AIAA fluid dynamics,

plasma dynamics and lasers conference and the 26th AIIA thermophysics conference, Honolulu, HI (USA), 24-26 Jun 1991). Order Number DE91002790. Source: OSTI; NTIS; GPO Dep.

When a vortex-dominated flow interacts with a sharp density interface, the dynamics are characterized by the interaction of baroclinically generated vorticity with the already existing vorticity field. This can be seen in many natural and technology settings; examples are the interaction of a ship or submarine wake with a thermocline, the collision of a buoyant thermal with a temperature inversion, and the interaction of a vortex flow with a flame front. This problem also serves as a generic model for turbulent mixing and entrainment processes across sharp density interfaces. The interaction between vortices and a free surface, with corresponds to the case where the density jump is very large, has been studied fairly extensively, both experimentally and computationally. By comparison, the literature for the more general case of vortex pairs and rings interacting with sharp density interfaces is relatively sparse. Experiments and numerical studies have been performed, but the numerical simulations were confined primarily to vortex pairs, restricted to the inviscid case, and the effect of density variation modeled under the Boussinesq approximation. The experiments were also confined to the Boussinesq regime. In this paper, we study the motion of a vortex ring in a sharply stratified, viscous fluid via a numerical solution of the full Navier-Stokes equations with finite-amplitude density variation. both Boussinesq and non-Boussinesq flow regimes will be studied, the effect of viscosity on the interaction will be examined, and three-dimensional aspects of the motion will be addressed, such as Widnall instability of the vortex ring and vortex reconnection at the interface.

15523 (ANL-HEP-CP–91-03) **Recent results and future prospects for the polarized beam at Fermilab.** Yokosawa, A. E-704 Collaboration. Argonne National Lab., IL (USA). [1990]. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. (CONF-9011177–7: Polarized collider workshop, University Park, PA (USA), 15-17 Nov 1990). Order Number DE91010590. Source: OSTI; NTIS; INIS; GPO Dep.

We summarize activities concerning the Fermilab polarized beams. They include a brief description of the polarized-beam facility, measurements of beam polarization by polarimeters, asymmetry measurements in the π^0 production at high $p_\perp$ and in the Λ (Σ^0), $\pi^\pm$, π^0 production at large x_F, and $\Delta\sigma_L(pp, \bar{p}p)$ measurements (Fermilab E-704). In the future we plan to investigate the proton-spin crisis by determining the gluon spin distribution in inclusive production of direct gamma, $\chi 2$, and J/ψ. 20 refs., 5 figs.

15524 (BNL–45844) **Partial wave analysis of $K\bar{K}\pi$ from $\bar{p}p \rightarrow K^+\bar{K}^0\pi^-X$ at 8 GeV/c.** Boehnlein, A. (Florida State Univ., Tallahassee, FL (USA)); Boehnlein, D.; Goldman, J.H.; Hagopian, V.; Chung, S.U.; Fernow, R.; Kirk, H.; Protopopescu, S.D.; Willutzki, H.J.; Blessing, S.; Crittenden, R.; Dzierba, A.; Zieminska, D.; Clement, B.J.; KrishnaBrookhaven National Lab., Upton, NY (USA). [1990]. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH00016. (CONF-9009309–11: Rheinfels workshop on hadron mass spectrum, St. Goar (Germany, F.R.), 3-6 Sep 1990). Order Number DE91009450. Source: OSTI; NTIS; INIS; GPO Dep.

We present the results of an amplitude analysis of the spin parity components as a function of mass of the $(K^+\bar{K}^0\pi^-)$ system as produced in the reaction $\bar{p}p \rightarrow (K^+\bar{K}^0\pi^-)$ X. Two peaks are observed in the $(K^-\bar{K}^0\pi^-)$ spectrum, one at (1279 ± 2) MeV/c^2 with a width of (21 ± 2) MeV/c^2, and one at (1417 ± 3) MeV/c^2 with a width of (62 ± 5) MeV/c^2. The amplitude analysis was performed in sixteen 20 MeV/c^2 mass intervals from 1.24 to 1.56 GeV/c^2. The waves used for the fitting were $J^{PG} = 0^{-+}$, 1^{++}, 1^{+-}, and background. 12 refs., 8 figs.

15525 (BONN-IR–90-47) **Separation of minimum and higher twist in the photoproduction of mesons with large transverse momenta.** Hoeger, K.C. Bonn Univ. (Germany, F.R.). Physikalisches Inst.; Bonn Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet. Oct 1990. 72p. (In German). Order Number DE91764651. Source: OSTI; NTIS (US Sales Only); INIS.

Higher-twist effects in point-like photon interactions on hydrogen have been studied in xF-distributions of charged particles for $-0.2 < xF < 0.84$ and $pT > 2.0$ GeV/c. Data were taken with a tagged photon beam with energies between 70 and 170 GeV and a pion/kaon beam at fixed energies of 80 and 140 GeV using the same setup of detectors at the CERN-Ω-spectrometer (WA69 experiment). The pion and kaon interactions were used to obtain an estimate of the hadron-like photon component. A first estimation of Higher-Twist cross sections in photoproduction of mesons at high pT has been obtained that is consistent with QCD-expectations. (orig.).

15526 (CERN–90-10(v.1)) **Large hadron collider workshop. Proceedings. Vol. 1.** Jarlskog, G.; Rein, D. (eds.). European Organization for Nuclear Research, Geneva (Switzerland); European Committee for Future Accelerators. 3 Dec 1990. 632p. (CONF-9010291–: Large Hadron Collider (LHC) workshop: physics and instrumentation, Aachen (Germany, F.R.), 4-9 Oct 1990; ECFA–90-133(v.1).). Order Number DE91623943. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of the LCH workshop at Aachen was to discuss the 'discovery potential' of a high-luminosity hadron collider (the Large Hadron Collider) and to define the requirements of the detectors. Of central interest was whether a Higgs particle with mass below 1 TeV could be seen using detectors potentially available within a few years from now. Other topics included supersymmetry, heavy quarks, excited gauge bosons, and exotica in proton-proton collisions, as well as physics to be observed in electron-proton and heavy-ion collisions. A large part of the workshop was devoted to the discussion of instrumental and detector concepts, including simulation, signal processing, data acquisition, tracking, calorimetry, lepton identification and radiation hardness. The workshop began with parallel sessions of working groups on physics and instrumentation and continued, in the second half, with plenary talks giving overviews of the LHC project and the SSC, RHIC, and HERA programmes, summaries of the working groups, presentations from industry, and conclusions. Vol. 1 of these proceedings contains the papers presented at the plenary sessions, Vol. 2 the individual contributions to the physics sessions, and Vol. 3 those to the instrumentation sessions. (orig.).

15527 (DESY–90-117) **Two-photon production of $\eta\pi\pi$ final states.** Karch, K.H. Deutsches Elektronen-Synchrotron (DESY),

Hamburg (Germany, F.R.). Oct 1990. 6p. (CONF-9009309--: Rheinfels workshop on hadron mass spectrum, St. Goar (Germany, F.R.), 3-6 Sep 1990). Order Number DE91764663. Source: OSTI; NTIS (US Sales Only); INIS.

Recent results from the Crystal Ball and CELLO experiments are presented. Evidence for the observation of a new $\eta\pi\pi$ resonance with a mass of about 1900 MeV/c^2 is reported. (orig.).

15528 (DESY-90-121) **Reconstruction of semileptonic b → u decays.** Albrecht, H. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)); Ehrlichmann, H.; Glaeser, R.; Harder, G.; Krueger, A.; Nau, A.; Nilsson, A.W.; Nippe, A.; Oest, T.; Reidenbach, M.; Schaefer, M.; Schmidt-Parzefall, W.; Schroeder, H.; Schulz,ARGUS Collaboration. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 16p. Contract BMFT 054DO51P;BMFT 054ER12P;BMFT 054HD24P;BMFT 054KA17P Order Number DE91764662. Source: OSTI; NTIS (US Sales Only); INIS.

Using the ARGUS detector at the e^+e^- storage ring DORIS II at DESY we have updated our results on charmless semileptonic B decays and searched for direct evidence for b → u transitions through reconstruction of complete events. This approach has successfully identified two $\Upsilon(4S)$ events which contain B meson decays toa non-charm final state. In one case, a B^0 meson is found in the channel $\pi^+ \mu^-$anti ν, while in the other a decay $B^+ \to \omega\mu^+\nu$ is seen. These events show that the previously observed signal of charmless semileptonic B decays is due to b → u transitions from which we obtain vertical strokeV_{ub}/V_{cb}vertical stroke = 0.11 ± 0.012 using the model of Altarelli et al. (orig.).

15529 (DESY-90-128) **Some snapshots of new CELLO and Crystal Ball results on $\gamma\gamma$ reactions.** Feindt, M. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 4p. Contract BMFT 054HH23P/7. (CONF-900822--: 25. IUPAP international conference on high energy physics, Singapore (Singapore), 2-8 Aug 1990). Order Number DE91764657. Source: OSTI; NTIS (US Sales Only); INIS.

Two topics from recent experimental two-photon spectroscopy are presented which are of relevance even in the LEP era - the discovery of a new (probably 2^{-+}) resonance in $\gamma\gamma \to \eta\pi\pi$ by Crystal Ball and CELLO, and the measurements of the electromagnetic form factors of the π^0, η and η' by CELLO. (orig.).

15530 (DESY-90-138) **Observation of the decays $D_s^- \to \phi e^-$anti ν and $D^- \to K^{*0}e^-$anti ν.** Albrecht, H. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)); Ehrlichmann, H.; Hamacher, T.; Krueger, A.; Mundt, R.; Nau, A.; Nippe, A.; Oest, T.; Reidenbach, M.; Schaefer, M.; Schmidt-Parzefall, W.; Schroeder, H.; Schulz, H.D.; Sefkow,.ARGUS Collaboration. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Nov 1990. 8p. Contract BMFT 054DO51P;BMFT 054ER12P;BMFT 054HD24P;BMFT 054KA17P Order Number DE91764654. Source: OSTI; NTIS (US Sales Only); INIS.

Using the ARGUS detector at the e^+e^- storage ring DORIS II at DESY, we have studied semileptonic charmed meson decays through Φ and K^{*0}-electron correlations in continuum production. Evidence for the decay $D_s^- \to \Phi e^-$anti ν has been observed, with a branching ratio relative to the channel $D_s^- \to \Phi\pi^-$ determined to be 0.57 ± 0.15 ± 0.15. The decay $D^- \to K^{*0}e^-$anti ν was also seen, with a value of 0.55 ± 0.08 ± 0.10 extracted for the branching ratio relative to the channel $D^- \to K^+\pi^-\pi^-$. The ratio of the two measurements, after application of SU(3) corrections, implies a branching ratio for $D_s^- \to \Phi\pi^-$ of (2.4 ± 1.0)%. (orig.).

15531 (DESY-90-149) **A search for substructure of leptons and quarks with the CELLO detector.** Behrend, H.J. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)); Criegee, L.; Field, J.H.; Franke, G.; Jung, H.; Meyer, J.; Podobrin, O.; Schroeder, V.; Winter, G.G.; Bussey, P.J.; Buttar, C.; Campbell, A.J.; Hendry, D.; Lumsdon, S.; SkillCELLO Collaboration. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Nov 1990. 27p. Order Number DE91768989. Source: OSTI; NTIS (US Sales Only); INIS.

Differential cross section data of the CELLO experiment on pair production of muons, taus, and heavy quarks in e^+e^--annihilation are presented and analysed, together with our data on Bhabha scattering, in terms of compositeness effects characterized by the mass scale Λ. We discuss difficulties in the combination of limits Λ from different experiments. The appropriate parameter to combine different results turns out to be $\epsilon = +\text{-}1/\Lambda^2$, which has in contrast to Λ Gaussian distributed errors. (orig.).

15532 (DOE/ER/03072-64) **A search for the rare decay $K^+ \to \pi^+ \nu\bar{\nu}$.** Akerib, D.S. Princeton Univ., NJ (USA). Dept. of Physics. Jan 1991. 134p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76ER03072. Order Number DE91010354. Source: OSTI; NTIS; INIS; GPO Dep.

This thesis describes an experimental search for the weak decay $K^+ \to \pi^+\nu\bar{\nu}$ performed at Brookhaven National Laboratory during the Winter of 1989 using the E787 Spectrometer designed expressly for this purpose. The first-order contribution to this decay cancels exactly via the Glashow-Iliopoulos-Maiani (GIM) Mechanism. However, the second-order process is expected to give a branching ratio between .6 → 6 × 10^{-10} in the Standard Model. The predicted rate for this process is theoretically well determined; the uncertainty is due to the experimental input parameters of the Model. We find no candidate events in a sample of 1.12 × 10^{11} kaon decays and we set an upper limit on the branching ratio of 4.4 × 10^{-9} at the 90% confidence level. Using the same data we also set an upper limit on the process $K^+ \to \pi^+$f of 9.3 × 10^{-10} at the 90% confidence level, where f is any neutral massless weakly-interacting particle.

15533 (DOE/ER/40368-T1) **[Studies of high energy phenomena using muons]: Progress report.** Northern Illinois Univ., De Kalb, IL (USA). [1990]. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-87ER40368. Order Number DE91010397. Source: OSTI; NTIS; INIS; GPO Dep.

This report covers the activities of the NIU high energy physics group as supported by DOE contract AC02-87ER40368 during the period from March through December of 1990. Our group has two primary efforts. The first is the D0 experiment at the Fermilab proton-antiproton collider, with major emphasis on its muon system. The second is the involvement of a portion of the group in Fermilab Experiments 772 and 789. Finally, we are also participating in the design of detectors for the SSC. A more detailed description of the work of the NIU high energy physics group may be found in the narrative accompanying our contract renewal proposal.

15534 (DOE/ER/40419-22) **Selected problems in experimental intermediate energy physics: Progress report, February 1, 1990-January 31, 1991.** Mayes, B.W.; Hungerford, E.V.; Pinsky, L.S. Texas Univ., Houston, TX (USA). Dept. of Physics. Sep 1990. 62p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-88ER40419. Order Number DE91008910. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses progress in the following areas of intermediate energy physics; hyperon physics at the AGS; electroproduction of hypernuclei; test of the standard model of electroweak interactions; and spin structure function of the neutron. (LSP)

15535 (DOE/ER/40479-3) **The Sudbury Neutrino Observatory project and the Kamiokande II project: Technical progress report, July 1, 1990-June 30, 1991.** Beier, E.W. Pennsylvania Univ., Philadelphia, PA (USA). Dept. of Physics. 4 Mar 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-88ER40479. Order Number DE91010641. Source: OSTI; NTIS; INIS; GPO Dep.

This document is a technical progress report on work performed at the University of Pennsylvania during the current year on the Sudbury Neutrino Observatory project and on the Kamiokande II project. The motivation for both experiments is the measurement of neutrinos emitted by the sun. The Kamiokande II experiment was an adaptation of an existing nucleon decay detector located in Japan to search for neutrinos emitted by the sun. It has been operational since 1986. Data taking was concluded in 1990 and work will terminate at the end of this grant year. The topics discussed in this report are: the Sudbury Neutrino Observatory project; photomultiplier tube measurements; photomultiplier bases; signal processing electronics; electronics system issues; software management and development; and Kamiokande II.

15536 (DOE/ER/40523–T3) **Experimental study of heavy flavor physics and SSC research and development at the University of Mississippi: Progress report, July 1, 1989–March 1, 1990.** Reidy, J.J. Mississippi Univ., University, MS (USA). Dept. of Physics and Astronomy. [1991]. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AS05-89ER40523. Order Number DE91010747. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses research in particle production and decay of charmed particles. The detectors used are discussed as well as data acquisition system. Research on superconducting super collider is also discussed. (LSP)

15537 (DOE/ER/40526–1) **[Study of hyperons and beauty particles]: Progress report.** California Univ., Berkeley, CA (USA). [1991]. 3p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG03-89ER40526. Order Number DE91010258. Source: OSTI; NTIS; INIS; GPO Dep.

The proposed research program is to study the production and decay properties of the hyperons and the beauty hadrons at Fermilab. Since the project was approved in 1989, a lot of progress has been made. This report is a summary of the achievements.

15538 (FNAL/C–90/255-E) **B-physics at CDF.** Baden, A.R. (Harvard Univ., Cambridge, MA (USA)). The CDF collaboration. Fermi National Accelerator Lab., Batavia, IL (USA). 10 Dec 1990. 25p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03000. (CONF-900799–5: 18. SLAC summer institute on particle physics: heavy quarks and gauge bosons, Stanford, CA (USA), 16-27 Jul 1990). Order Number DE91010308. Source: OSTI; NTIS; INIS; GPO Dep.

During the 1988/1989 run at the Fermilab Tevatron, the CDF detector collected $\simeq$4.1 pb^{-1} of $p\bar{p}$ data at $\sqrt{s}$ = 1.8 TeV. The main goals of this run being physics at high p_t, the CDF trigger was "tuned" for maximizing signals from Z^0s, Ws, t-quarks, etc. As such, compared to the high p_t physics, the b-physics program was of secondary importance other than that which would be used for background calculations. Also, CDF had no vertex chamber capability for seeing displaced vertices. However, significant b-quark, physics results are evident in two data samples; inclusive electrons and inclusive J/ψ where $J/\psi \rightarrow \mu^+\mu^-$. We can then ask ourselves, given all this, why is it that CDF is able to do b-quark physics? The answer is that nature has been kind enough to provide b-quarks at an extremely high rate at the Tevatron. The production cross-section for $b\bar{b}$ production is quite large. In the rest of this paper, I will try to specify the goals for b-physics using the inclusive electrons and J/ψ signals for the 1988/1989 data set. I will then provide a brief look at the data, and will finish with some highly speculative guesses as to whether or not experiments at the Tevatron which look for CP violation in the b sector are possible.

15539 (FNAL/C–91/66-E) **Search for the top quark with CDF.** Barbaro-Galtieri, A. (Lawrence Berkeley Lab., CA (USA)). E-741 CDF collaboration. Fermi National Accelerator Lab., Batavia, IL (USA). 22 Jan 1991. 6p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03000. (CONF-9006267–29: 1990 DPF summer study on high energy physics, Snowmass, CO (USA), 25 Jun - 13 jul 1990). Order Number DE91010309. Source: OSTI; NTIS; INIS; GPO Dep.

During the 1988–89 Tevatron Collider run the CDF detector has collected data for an integrated luminosity of 4.4 pb^{-1}. The sample has been used to search for the top quark in several topologies. Preliminary results show that a top mass below 89 GeV is excluded at the 95% confidence level, thus extending the limit of 77 GeV previously published by CDF. 14 refs., 8 figs.

15540 (FNAL/C–91/81-A) **A proposed search for dark-matter axions in the 0.6–16 μeV range.** van Bibber, K. (Lawrence Livermore National Lab., CA (USA)); Sikivie, P.; Sullivan, N.S.; Tanner, D.B.; Turner, M.S.; Moltz, D.M. Fermi National Accelerator Lab., Batavia, IL (USA). Mar 1991. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48 ;FG05-86ER40272 ;FG02-90ER40560. (CONF-901141–4: International conference on trends in astroparticle physics, Santa Monica, CA (USA), 26 Nov - 1 dec 1990). Order Number DE91010353. Source: OSTI; NTIS; INIS; GPO Dep.

A proposed experiment is described to search for dark-matter axions in the mass range 0.6–16 μeV. The method is based on the Primakoff conversion of axions into monochromatic microwave photons inside a tunable microwave cavity in a large volume high field magnet, as described by Sikivie. This proposal capitalizes on the availability of two Axicell magnets from the decommissioned MFTF-B fusion machine at LLNL. Assuming a local dark-matter density in axions of ρ = 0.3 GeV/cm^3, the axion would be found or ruled out at the 97% c.l. in the above mass range in 48 months. 13 refs., 6 figs., 2 tabs.

15541 (IAE–4818-2) **Experiments proposed on low-energy ν-tilde$_e$ physics at pik-type research reactors.** Mikaelyan, L.A.; Tolokonnikov, S.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 9p. Order Number DE91623931. Source: OSTI; NTIS (US Sales Only); INIS.

It is noted that the interaction of electron antineutrinos with neutrons, protons and electrons is known with a low accuracy and the theory of electroweak interactions in this area has no quantitative verification. It is proposed to create an intensive source of hard ν-tilde$_e$ from the decay of lithium-8 on the basic of the PIK-type research reactor. Expected count rates and spectra of products of different reactions are presented. The proposed ν-tilde$_e$ source displays appreciable advantages over power and industrial reactors, on which the neutrino experiments are performed at present. 8 refs.; 5 figs.; 2 tabs.

15542 (IAE–4844-2) **On the project of measuring the neutron lifetime (τ_n) within an error of $\delta\tau_n \simeq \pm 3$s in the experiment on cold neutron beam transport in the field-free space.** Spivak, P.E. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 23p. Order Number DE91623944. Source: OSTI; NTIS (US Sales Only); INIS.

A possibility is shown for measuring the neutron lifetime (τ_n) within an error of $\pm$3s in the cold neutron beam experiment. Methods for measuring the quantities determining neutron density (Q_s), efficiency (ϵ) of observation of neutron decay events, permeability (η) of grids and counting rates (n_p) of recoiling protons were approved earlier. The errors in measurements of these quantities in the cold neutron beam experiment (on example of the ILL reactor beam) have been analyzed, and it has been found that their contribution to the τ_n error are $\delta Q_s = \pm 0.22\%$, $\delta\epsilon = \pm 0.1\%$, $\delta\eta = \pm 0.08\%$, $\delta n_p = \pm 0.14\%$ respectively. 15 refs.; 4 figs.; 1 tab.

15543 (IFVE-OEF–89-54) **Exotic hadrons.** Landsberg, L.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 84p. Order Number DE91623945. Source: OSTI; NTIS (US Sales Only); INIS.

Extended version of the Invited Talk at the XXXIV Recontres de Moriond Les Arcs, Savoie, France, March, 12-18, 1989.

Status of search and study of exotic mesonic states in hadronic reactions, J/Ψ decays and $\gamma\gamma$ collisions is presented. In the recent years these experiments resulted in the observation of several mesonic states, whose properties go beyond the framework of a simple quark model of ordinary (qantiq)-mesons. The status of the E/iota puzzles and the nature of E(1420) meson are being discussed. 91 refs.; 27 figs.; 9 tabs.

15544 (INS–813) **A search for charged Higgs bosons at TRISTAN.** Adachi, I. (Nagoya Univ. (Japan). Dept. of Physics); Aihara, H.; Moser, M. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. May 1990. 16p. Order Number DE91767869. Source: OSTI; NTIS (US Sales Only); INIS.

We searched for pair production of charged Higgs bosons via e^+e^- annihilation, using data (23.3pb^{-1}) collected by the TOPAZ detector in the energy range $\sqrt{s}$ = 52.0 $\sim$ 61.4GeV. We observed no evidence for charged Higgs pair production and extended the excluded region in the M_{H^+}–BR(hadron) plane. The 95 % CL lower mass limit is the most stringent for BR(hadron) = 0.6, giving $M_{H^+} > 22$ GeV. (author).

15545 (INS–862) **π^0-Factory using TARNII accelerator.** Ukai, Kumataro. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear

Study. Dec 1990. 18p. Order Number DE91767971. Source: OSTI; NTIS (US Sales Only); INIS.

We propose a π^0-Factory at the TARNII accelerator. The momentum spread of beam in the TARNII is cooled down to $\sim 10^{-4}$ and also a beam size at the interaction point is very small. Using this beam and an iced deuteron pellet target, we can get a high luminosity greater than $5x10^{33}$ $cm^{-2}s^{-1}$. π^0-meson is generated by the pd->$^3H_e\pi^0$ process. The interaction area is expected to be order of mm and ^3H_e, is detected very easily and clearly by the dE/dX and the TOF methods. Then, we can get a very clean π^0. These clean and luminous π^0 make possible to perform an accurate measurement for the π^0-rare decay with 2 or 3 order higher statistics than existing experiments. (author).

15546 (ITEF–131-89) **On possible existence of exotic baryon resonance in P3Π⁺Π⁻ system.** Brovkin, L.Yu. (and others); Kiselevich, I.L.; Mikhajlichenko, V.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 12p. (In Russian). Order Number DE91623946. Source: OSTI; NTIS (US Sales Only); INIS.

Preliminary results of investigation into P3Π⁺Π⁻system in $\Pi^+p \rightarrow P3\Pi^+2\Pi^-$ reaction are presented. Peak with 2480±10MeV/c mass is observed in mass spectrum of P3Π⁺Π⁻ system at certain samplings. The observed peak may be interpreted as exotic baryon. It is shown that observed baryon is born in quasi two-particle reaction. Evaluation of cross section of observed baryon production is equal to 23±8μb. 15 refs.; 9 figs.

15547 (LAL–8969) **Search for magnetic monopoles with Frejus detector.** Benadjal, Y. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire; Montpellier-2 Univ., 34 (France). Oct 1989. 162p. (In French). Order Number DE91767812. Source: OSTI; NTIS (US Sales Only).

Magnetic monopoles are predicted by every Grand Unification Theory. Their experimental search constitutes, together with proton decay, the only direct test of these theories. The Frejus experiment, using a large calorimetric detector, has looked for cosmic ray monopoles in the speed (v/c) range from 0.0001 to 0.1. No candidate was recorded. The flux limits obtained represent an original contribution at the low end of the speed range. After a first chapter covering various theoretical aspects of the monopole problem, we describe, in the following chapter, the main methods which can be applied to try to detect monopoles, and we review a certain number of experiments. The third chapter describes the Frejus magnetic monopole experiment. The detection method and the Geiger tube efficiency for slow monopoles are examined. Particular attention is given to the trigger system for slow monopoles. It was possible to add a specially designed electronic system to the detector making the monopole search possible. This system is described here. Four million events were recorded. The final chapter is devoted to their analysis. It includes, in particular, the description of the method which made it possible to reduce this mass of data to roughly 1000 events which were then scanned one by one in order to identify possible candidates. Our results in terms of flux limits are compared with those obtained by the better competing experiments.

15548 (LAL–9013) **Baryon pair production in e^+e^- annihilation at $\sqrt{s}$ = 2.4 GeV.** Bisello, D. (Padua Univ. (IT). Ist. di Fisica); Busetto, G.; Castro, A.; Nigro, M.; Pescara, L.; Posocco, M.; Sartori, P.; Stanco, L.; Antonelli, A.; Biagini, M.E.; Baldini, R.; Calcaterra, A.; Schioppa, M.; Augustin, J.E.; Cosme, G.; Couchot, F.; Fulda, FDM2 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. Apr 1990. 16p. Order Number DE91767806. Source: OSTI; NTIS (US Sales Only).

Search for baryon pair production in e^+e^- annihilation at $\sqrt{s}$ = 2386 MeV is reported. The data relate to a luminosity of 161 nb^{-1} collected by the DM2 experiment at DCI, the Orsay colliding ring. First measurement of direct e^+e^- annihilation into ΛantiΛ and of e^+e^- -> pantip at this energy are presented. First observation of a good e^+e^- -> nantin, candidate is reported and upper limits are given for e^+e^- -> nantin, ΛantiΣ⁰ + c.c. and Σ⁰antiΣ⁰.

15549 (LAL–9014) **Study of the eta_c decays.** Bisello, D. (Padua Univ. (IT). Ist. di Fisica); Busetto, G.; Castro, A.; Gini, P.; Pescara, L.; Sartori, P.; Stanco, L.; Ajaltouni, Z.; Dekmouche, A.; Falvard, A.; Jousset, J.; Henrard, P.; Michel, B.; Montret, J.C.; Augustin, J.E.; Cosme, G.; Couchot, F.;DM2 Collaboration. Paris-11 Univ., 91 - Orsay (France). Lab. de l'Accelerateur Lineaire. May 1990. 35p. Order Number DE91767807. Source: OSTI; NTIS (US Sales Only).

The eta_c has been observed in hadronic decay modes from the 8.6 million J/PSI collected by the DM2 experiment at DCI. The eta_c mass is set to (2974.4+-1.9) MeV/c^2. Its pseudoscalar character is measured from the eta_c -> rho^0rho^0 and PHIPHI decays. The observation of the eta_c -> PHIPHI decay fixes the eta_c isospin to zero and the G-parity to be positive. An upper limit of $\Gamma_{\gamma\gamma}(eta_c)$ is set from the search for the eta_c -> $\gamma\gamma$ decay.

15550 (LA-UR–91-761) **Nuclear effects in Drell-Yan and quarkonium production in proton-nucleus collisions.** Peng, J.C. (Los Alamos National Lab., NM (USA)); Alde, D.M.; Baer, H.W.; Carey, T.A.; Garvey, G.T.; Klein, A.; Lee, C.; Leitch, M.J.; Lillberg, J.W.; McGaughey, P.L.; Mishra, C.S.; Moss, J.M.; Brown, C.N.; Cooper, W.E.; Hsiung, Y.B.; Adams, M.R.; Guo, R.;Los Alamos National Lab., NM (USA). [1990]. 17p. Sponsored by US-DOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9005233–12: 2. international conference on medium- and high-energy nuclear physics, Taipei (Taiwan), 8-18 May 1990). Order Number DE91009940. Source: OSTI; NTIS; GPO Dep.

A precise measurement of the atomic mass dependence of dimuon production induced by 800 GeV protons incident on targets of ^2H, C, Ca, Fe, and W is reported. The relative Drell-Yan yield per nucleon, $R = Y_A/Y_{2_H}$, is sensitive to modifications of the antiquark sea in nuclei. No effect is seen for the range of target-quark momentum fraction, $0.1 < x_t < 0.3$. For $x_t < 0.1$ the ratio is slightly less than unity for the heavy nuclei. These results are compared with the predictions of EMC models. A depletion of the yield per nucleon from heavy nuclei is observed for both J/ψ and ψ' production. This depletion exhibits a strong dependence of x_F and p_t. Within experimental errors the depletion is the same for the J/ψ and the ψ'. 41 refs., 6 figs.

15551 (LA-UR–91-987) **The A dependence of dilepton production.** Garvey, G.T. Los Alamos National Lab., NM (USA). [1990]. 14p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9010183–3: European workshop on hadronic physics with electrons beyond 10 GeV, Dourdan (France), 8-12 Oct 1990). Order Number DE91009966. Source: OSTI; NTIS; INIS; GPO Dep.

The discovery in 1982, by the EMC group, that the structure function $F_2(x)$ per nucleon is different in iron than deuterium was the first evidence that the structure of the nucleon might be altered in nuclei. Much more extensive and precise and data have been taken since the original discovery. This body of data is now quite consistent and many of the features of the original "EMC effect" remain intact. There have been a variety of theoretical explanations of the data, but none are totally compelling. The deep-inelastic-scattering (DIS) data for the ratio of $F_2^{Fe}(x)$ in iron to $F_2^D(x)$ in deuterium are given for the region $0.03 \leq x \leq \sim 1.0$.

15552 (LBL–30247) **Higgs detection via decays to leptons with the SDC detector.** Barnett, R.M.; Einsweiler, K.; Hinchliffe, I. Lawrence Berkeley Lab., CA (USA). Nov 1990. 36p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. (SSC-SDC–90-00099). Order Number DE91010238. Source: OSTI; NTIS; INIS; GPO Dep.

This document discusses the potential for the SDC detector to discover the Standard Model Higgs boson via it decays to 4 charged leptons or to 2 charged leptons and 2 neutrinos. 22 refs., 22 figs.

15553 (NIIYaF-MGU–89-56-133) **Space-time structure of hadron interaction: Fixed-target experiment at p, pi and K beams with energy of 10-20 GeV.** Bel'zer, L.I.; Bodyagin, V.A.; Gribushin, A.M.; Vardanyan, I.N.; Ershov, A.A.; Sarycheva, L.I.; Sinev, N.B. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-issledovatel'skij Inst. Yadernoj Fiziki. 1989. 8p. (In Russian). Order Number DE91623947. Source: OSTI; NTIS (US Sales Only); INIS.

Experiment with a fixed target in p, π and K beams of intermediate energies (10-20 GeV) is carried out t trace the evolution of

nonequilibrium hadron states passing through a nuclear substance in search of the most characteristic manifestations of the mechanism of quark hadronization. Differential cross sections of leading hadron generation L on nuclear targets from hydrogen to lead are measured for semiinclusive reaction $hA \rightarrow L+X_\eta$, where X_η is selection of events with certain configuration of tracks corresponding to incoherent channels with required pulse transfer from initial particle to ΔP target or interaction range $\Delta z \approx$ Planck constant/ΔP. 3 refs.; 2 figs.

15554 (NIKHEF-H–90-16) **Inclusive D^{*+-} production in photon-photon collisions.** Alston-Garnjost, M. (Lawrence Berkeley Lab., CA (USA)); Avery, R.E.; Barker, A.R. Stanford University-NIKHEF-H Collaboration; TPC/Two-Gamma Collaboration. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Oct 1990. 15p. (SLAC-PUB–5348.). Order Number DE91623941. Source: OSTI; NTIS (US Sales Only); INIS.

The TPC/Two-Gamma Collaboration has measured the inclusive cross section for the production of charmed D^{*+-} mesons in photon-photon collisions. The reaction utilized was $e^+e^- \rightarrow e^+e^-D^{*-}X$, with $D^{*-} \rightarrow D^0\pi^{*-}$, $D^0 \rightarrow K^-\pi^{*-}$, and either zero or one outgoing e^+ detected. The result, sigma ($e^+e^- \rightarrow e^+e^-D^{*-}X$) 74+-26+-19 pb, is in agreement with the Quark Parton Model prediction for $e^+e^- \rightarrow e^+e^-c$ c-bar, combined with a Lund model for the hadronization of the charmed quarks. (author). 12 refs.; 4 figs.

15555 (ORNL/FTR–3870) **[L* collaboration meeting]: Foreign trip report, March 4–8, 1991.** Plasil, F. Oak Ridge National Lab., TN (USA). 13 Mar 1991. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91009876. Source: OSTI; NTIS; GPO Dep.

The traveler attended the L* collaboration meeting held in St. Genis, France, near CERN, Geneva. Various member countries of the collaboration presented recent R&D results. Strategy was discussed for the upcoming PAC meeting in Dallas. The traveler also held several discussions concerning CERN collaborative experiments L3 and WA93. The possibility of ORNL participation in a CERN experiment using lead beams was also discussed.

15556 (SSCL–347) **The B factory, the Superconducting Super Collider, and an e^+e^- linear collider: How they stand against each other.** Sanda, A.I. (Superconducting Super Collider Lab., Dallas, TX (USA)). Superconducting Super Collider Lab., Dallas, TX (USA). Jan 1991. 10p. Sponsored by USDOE, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract AC02-89ER40486. Contract NSF-INT-8613131. (CONF-8910393–1: Workshop for asymmetric B-factory at KEK, Tsukuba (Japan), 2-4 Oct 1989). Order Number DE91009903. Source: OSTI; NTIS; INIS; GPO Dep.

Many high energy physicists in Japan will be participating in Superconducting Super Collider (SSC) experiments. KEK is planning to build a B factory. Japan Linear Collider (JLC) — an e^+e^- linear collider with $\sqrt{s} = (.5 \sim 1.5)$ TeV — is being considered as the future project at KEK. I have been asked to discuss the physics compatibilities and the relative merits of these three projects. From a physics point of view, nobody can argue against building an accelerator. Looking back at the past 40 years, we note that physics discoveries from new accelerators often far exceeded our original expectations. In order to make accelerators cost effective, their parameters must be tuned so that there is guaranteed physics. By guaranteed physics, I mean that a machine must be capable of observing new phenomena predicted by the most conventional standard model. Discoveries beyond such bottom line expectations should be treated as bonuses and should not be treated as major motivations for building a machine. I will first discuss the bottom line physics at SSC and at a B factory. I will then go on to discuss the compatibility of the two physics. Finally, I will discuss the physics at JLC, and its relationship with that at SSC and at a B factory.

15557 (ANL-HEP-TR–91/17) **Fast shower simulation based on Gauß's law.** Trost, H.J. Argonne National Lab., IL (USA). 1 Mar 1991. 36p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. Order Number DE91009885. Source: OSTI; NTIS; INIS; GPO Dep.

I have developed a procedure for fast shower simulation on the basis of Gauß's law, applied in analogy to charge distributions and related vector fields of electromagnetic interactions. The nature of a shower (i.e. electromagnetic or hadronic), a homogeneous medium for its development, its starting point, direction and energy content are needed to be specified. Then the contribution from the shower to the total signal in any given volume made up of the given medium can be calculated as an integral over the surface of that volume using a precalculated vector field corresponding to the shower distribution. Thus the integration problem is reduced from three to two dimensions. The quality of the shower simulation is determined by the accuracies of the vector fields and of the surface integration. This technique is shown to yield acceptable results for typical sized of calorimeter cell structures. 19 refs., 4 figs.

15558 (BNL–45455) **Quark screening lengths in finite temperature QCD.** Gocksch, A. (Brookhaven National Lab., Upton, NY (USA)). Brookhaven National Lab., Upton, NY (USA). Nov 1990. 5p. Sponsored by USDOE, Washington, DC (USA); National Aeronautics and Space Administration, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract AC02-76CH00016. Grant PHY89-04035. (CONF-901072–14: LATTICE '90: 7th international lattice gauge theory conference, Tallahassee, FL (USA), 8-12 Oct 1990). Order Number DE91010366. Source: OSTI; NTIS; INIS; GPO Dep.

We have computed Landau gauge quark propagators in both the confined and deconfined phase of QCD. I discuss the magnitude of the resulting screening lengths as well as aspects of chiral symmetry relevant to the quark propagator. 12 refs., 1 fig., 1 tab.

15559 (BNL–45575) **Applications of gauge-fixed correlation functions of quarks and gluons.** Bernard, C. (California Univ., Santa Barbara, CA (USA). Inst. for Theoretical Physics); Soni, A.; Yee, K. Brookhaven National Lab., Upton, NY (USA). Dec 1990. 6p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH00016. (CONF-901072–13: LATTICE '90: 7th international lattice gauge theory conference, Tallahassee, FL (USA), 8-12 Oct 1990; NSF-ITP–90-214). Order Number DE91010365. Source: OSTI; NTIS; INIS; GPO Dep.

Two uses of fixed gauge correlation functions involving quarks and gluons – as probes of effective quark and gluon parameters and their gauge dependence and as constraints for matching coefficients – are examined. Effective quark and gluon masses are found to decrease with increasing gauge parameter λ. A fixed gauge technique is used to determine $\bar{s}d$ matching coefficients. Despite gauge variance of effective quark masses, results of this matching – modulo statistics – are gauge invariant. Accordingly this technique is applied to the Delta $I = \frac{1}{2}$ Rule. We are however unable to obtain physically useful results at present in this case because of large fluctuations. 17 refs., 5 figs.

15560 (CSNSM–8954) **Low-energy antiproton physics at Lear.** Thibault, C. Paris-11 Univ., 91 - Orsay (France). Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse. 1990. 17p. (CONF-8909299–: 5. French-Japanese symposium on nuclear physics: new aspects and future prospects in nuclear physics at intermediate energies, Dagashima (Japan), 26-30 Sep 1989). Order Number DE91767818. Source: OSTI; NTIS (US Sales Only).

The present status of the program of low-energy antiproton physics at LEAR is presented. This program is developing according to four main lines: (1) Nucleon-Antinucleon interactions: spectroscopy of protonium and antiprotonic atoms, elastic and inelastic scattering, charge-exchange reactions, strangeness-exchange reactions, antiproton-nucleus interactions. (2) Annihilations: dynamics of nucleon-antinucleon annihilation at rest, multinucleon annihilations, meson spectroscopy, search for exotic structures, proton form factors in the time-like region, study of CP violation. (3) Comparison of p and antip properties: comparison of their inertial masses (test of CPT invariance), and of their gravitational masses. (4) Use of antip as a probe in Atomic Physics.

15561 (DESY–90-114) **Fractal dimensions from a 3-dimensional intermittency analysis in e^+e^- annihilation.** Behrend, H.J. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)); Criegee, L.; Field, J.H.; Franke, G.; Jung, H.; Meyer, J.; Podobrin, O.; Schroeder, V.; Winter, G.G.; Bussey, P.J.; Campbell, A.J.; Hendry, D.; Lumsdon, S.J.; Skillicorn, I.OCELLO Collaboration. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 13p. Order Number DE91764664. Source: OSTI; NTIS (US Sales Only); INIS.

The intermittency structure of multihadronic e^+e^- annihilation is analyzed by evaluating the factorial moments F_2-F_5 in 3-dimensional Lorentz invariant phase space as a function of the resolution scale. We interpret our data in the language of fractal objects. It turns out that the fractal dimension depends on the resolution scale in a way that can be attributed to geometrical resolution effects and dynamical effects, such as the π^0 Dalitz decay. The LUND 7.2 hadronization model provides an excellent description of the data. There is no indication of unexplained multiplicity fluctuations in small phase space regions. (orig.).

15562 (DESY–90-116) **Flux quantization and quantum mechanics on Riemann surfaces in an external magnetic field.** Bolte, J. (Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik); Steiner, F. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 7p. Order Number DE91764665. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate the possibility to apply an external constant magnetic field to a quantum mechanical system consisting of a particle moving on a compact or non-compact two-dimensional manifold of constant negative Gaussian curvature and of finite volume. For the motion on compact Riemann surfaces we find that a consistent formulation is only possible if the magnetic flux is quantized, as it is proportional to the (integrated) first Chern class of a certain complex line bundle over the manifold. In the case of non-compact surfaces of finite volume we obtain the striking result that the magnetic flux has to vanish identically due to the theorem that any holomorphic line bundle over a non-compact Riemann surface is holomorphically trivial. (orig.).

15563 (DESY–90-122) **A note on gluon distribution at small x.** Charchula, K.; Krawczyk, M. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). 19 Oct 1990. 8p. Order Number DE91764667. Source: OSTI; NTIS (US Sales Only); INIS.

We compare the small x behaviour of gluon distribution resulting from the Balitskij-Lipatov equation and from the Monte Carlo approach proposed by Marchesini and Webber. The role of the momentum conservation constraints is discussed. (orig.).

15564 (DESY–90-125) **How to determine all the angles of the unitarity triangle from $B_d^0 \to DK_S$ and $B_s^0 \to D\phi$.** Gronau, M. (Technion-Israel Inst. of Tech., Haifa (Israel)); London, D. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 16p. (TECHNION-PH–90-26;UdeM-LPN-TH–34). Order Number DE91764660. Source: OSTI; NTIS (US Sales Only); INIS.

We consider within the standard model the time-dependent decay rates of the three processes $B_d^0 \to D^0$ Ks.anti D^0Ks and D_1^0Ks, where D_1^0 is a neutral D meson CP-eigenstate. We show that it is possible to derive from these processes, in which two weak amplitudes are involved, two of the three angles in the unitarity triangle of the Cabibbo-Kobayashi-Maskawa matrix. The third angle can be determined from $B_s^0 \to D\Phi$. All three angles are obtained free of hadronic final-state uncertainties. (orig.).

15565 (DESY–90-127) **Phenomenology of geometrical flavour interactions at TeV energies.** Ringwald, A.; Schrempp, F.; Wetterich, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 31p. Order Number DE91764658. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate the experimental signatures of the recently proposed 'geometrical' production of many W. Z. Higgs and (primordial) fermions ($n\omega \simeq \alpha\omega^{-1} \simeq 30$) with a relatively large cross section. Such events, if they exist, should be seen at the LHC (SSC) provided that the (parton) threshold energy for the onset of geometrical flavour production is below 11 (28) TeV. (orig.).

15566 (DESY–90-130) **Electron-state bremsstrahlung processes $ep \to \gamma ep(X)$ at HERA.** Akhundov, A.A. (AN Azerbajdzhanskoj SSR, Baku (USSR). Inst. Fiziki); Bardin, D.Yu.; Kalinovskaja, L.V. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 25p. Order Number DE91764656. Source: OSTI; NTIS (US Sales Only); INIS.

The analytic formulae for the bremsstrahlung photon spectra in the processes $lN \to \gamma lN$ and $ln \to \gamma lX$ (taking into acount γ- and Z-boson exchange diagrams) are derived. The energy and angular distributions of photons are computed at HERA energies. The very large sensitivity of spectra for the deep inelastic channel to the choice of the structure functions is revealed in the region of small angles and large energies of the emitted photons. (orig.).

15567 (DESY–90-139) **Form factor analysis and unitarity effects in $D \to K^*lv$.** Koepp, G. (Technische Hochschule Aachen (Germany, F.R.). Lehrstuhl fuer Experimentalphysik 3A und 3. Physikalisches Inst.); Kramer, G.; Schuler, G.A.; Palmer, W.F. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Nov 1990. 10p. Contract DE-AC02-76ER01545;BMFT 054HH92P/3. Order Number DE91764655. Source: OSTI; NTIS (US Sales Only); INIS.

The large polarization recently reported by Fermilab experiment E691 in $D \to K^* lv$ casts doubt on quark model form factors. We investigate whether unitarity corrections can make the standard quark model consistent with the E691 data. Despite significant corrections, we show that the quark model still can not achieve the high polarization of the E691 data. Unitarity corrections, including CP-odd effects, will be visible in the next generation experiments. (orig.).

15568 (DESY–90-140) **Electroweak multi-particle-production at TeV energies?.** Wetterich, C. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Nov 1990. 10p. Order Number DE91764668. Source: OSTI; NTIS (US Sales Only); INIS.

At very high energies the mean particle multiplicity in electroweak scattering processes should become high, associated with slowly raising total inelastic cross sections. I speculate that this nonperturbative phenomenon may already occur for energies above a few TeV. (orig.).

15569 (DESY–90-144) **Using neural networks to identify jets in hadron-hadron collisions.** Bhat, P. (Fermi National Accelerator Lab., Batavia, IL (USA)); Loennblad, L.; Sugano, Katsuhito; Meier, K. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Nov 1990. 12p. (CONF-9006267–: 1990 DPF summer study on high energy physics, Snowmass, CO (USA), 25 Jun - 13 jul 1990; LU-TP–90-13). Order Number DE91764715. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate the use of neural network techniques to discriminate between quark and gluon jets in Monte Carlo generated panti p collisions. We also investigate the use of this technique to distinguish hadronically decaying W and Z bosons from QCD background. In the latter case we find that the signal-to-background ratio may be increased by more than a factor of 10 using a neural network trigger. (orig.).

15570 (DESY–90-154) **Very energetic photons at HERA.** Bawa, A.C.; Krawczyk, M. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Dec 1990. 14p. Order Number DE91768988. Source: OSTI; NTIS (US Sales Only); INIS.

We show that very energetic photons in the backward direction can be produced in deep inelastic Compton scattering at HERA. Assuming a fixed energy of 9 GeV for the initial photons and 820 GeV for the protons a high rate is found for the production of final photons with a transverse momentum equal to 5 GeV/c and energy between 40 GeV and 300 GeV. These energetic photons arise mainly from the scattering of the soft gluonic constituents of the initial photon with quarks from the proton. They are produced in the backward direction in coincidence with a photon beam jet of energy proportional to 9 GeV in the forward direction. (orig.).

15571 (DOE/ER/40153–7) **Research in particle theory: Annual progress report, December 1, 1989–October 10, 1990.**

Mansouri, F.; Suranyi, P.; Wijewardhana, L.C.R.; Witten, L. Cincinnati Univ., OH (USA). Oct 1990. 15p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-84ER40153. Order Number DE91010749. Source: OSTI; NTIS; INIS; GPO Dep.

A 2+1 dimensional deSitter Chern-Simons theory has been constructed and shown to be consistent. Wilson loop variables have been computed and shown to close under Poisson bracket operation for N = 2 Poincare supergravity. It has also been shown that there are two equivalent pictures of describing two particle scattering in 2+1 dimensional gravity theory, which are related by multivalued gauge transformations. We have generalized the Jackiw-Johnson sumrule, relating Goldstone boson decay constants to the dynamical masses of fermions, to an arbitrary symmetry group. We have analyzed dynamical parity breaking in 2+1 dimensional 4-fermi theories. Finally, we have found the partition function for a system of free parabosons and parafermions of order two. 53 refs.

15572 (DOE/ER/40224–158) **Limit on tau neutrino magnetic moment from neutrino counting.** Deshpande, N.G. (Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science); Sharma, K.V.L. Oregon Univ., Eugene, OR (USA). Inst. of Theoretical Science; Tata Inst. of Fundamental Research, Bombay (India). Sep 1990. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG06-85ER40224. (OITS–448). Order Number DE91009567. Source: OSTI; NTIS; INIS; GPO Dep.

By analytical means, using data from neutrino counting at e^+e^- colliders we calculate a limit on the magnetic moment of the tau neutrino. We obtain a limit of $\mu < 8.2 \times 10^{-6}\ \mu_B$ at 90% C.L. 8 refs.

15573 (DOE/ER/40423–13-P90) **The quenched spectrum with staggered fermions.** Gupta, R. (Los Alamos National Lab., NM (USA)); Guralnik, G.; Kilcup, G.W.; Sharpe, S.R. Washington Univ., Seattle, WA (USA). Dept. of Physics. Oct 1990. 34p. Sponsored by USDOE, Washington, DC (USA); National Science Foundation, Washington, DC (USA); Sloan (Alfred P.) Foundation, New York, NY (USA). DOE Contract AS06-88ER40423 ;W-7405-ENG-36. (DOE/ER/01545–445;NSF-ITP–90-172;LA-UR–90-3050). Order Number DE91009613. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper we present results for the hadron spectrum in the quenched approximation using staggered fermions. Pinning down the quenched spectrum is an important step in the program of using lattice calculations to extract physically useful quantities. If we cannot extract the masses of the lightest few states with small errors, and make reliable extrapolations to zero quark mass, then calculations of more complicated quantities are suspect. Furthermore, we would like to know how well the quenched approximation reproduces the physical spectrum, for this gives us some indication of the trustworthiness of other quenched calculations. We present results for the spectrum of QCD in the quenched approximation using staggered fermions at $\beta = 5.7$, 6.0 and 6.2. We use extended wall sources, which give a better projection onto the ground state, and allow us to study many non-local pion and rho states, as well as the Delta baryon. Staggered flavor symmetry breaking reduces dramatically from $\beta = 5.7$ to 6.2. For $\beta = 6$, the ratio m_N/m_ρ lies significantly below 1.5 for $m_q < m_s$. At $\beta = 6$ we study finite volume effects using $16^3 \times 40$ and $24^3 \times 40$ lattices. We reanalyze our old data at $\beta = 6.2$ and resolve the problem of the anomalously light scalar state. 20 refs., 19 figs., 11 tabs.

15574 (FNAL/C–91/72-T) **Hard amplitudes in gauge theories.** Parke, S.J. Fermi National Accelerator Lab., Batavia, IL (USA). Mar 1991. 35p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03000. Order Number DE91009769. Source: OSTI; NTIS; INIS; GPO Dep.

In this lecture series I presents recent developments in perturbation theory methods for gauge theories for processes with many partons. These techniques and results are useful in the calculation of cross sections for processes with many final state partons which have applications in the study of multi-jet phenomena in high-energy colliders. The results illuminate many important and interesting properties of non-abelian gauge theories. 30 refs., 9 figs.

15575 (IAE–4725-1) **Transformation of covariant quark Wigner operator to noncovariant one.** Selikhov, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 25p. Order Number DE91623903. Source: OSTI; NTIS (US Sales Only); INIS.

The gauge in which covariant and noncovariant quark Wigner operators coincide has been found. In this gauge the representations of vector potential via field strength tensor is valid. The system of equations for the coefficients of covariant Wigner operator expansion in the basis γ-matrices algebra is obtained. 12 refs.; 3 figs.

15576 (IC–90/212) **A dependence of perturbative predictions of extended standard model on Z-Z' mixing and QCD renormalization scheme parameters.** Pankov, A. (International Centre for Theoretical Physics, Trieste (Italy)); Raczka, R.; Satsunkevich, I.S. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 13p. Order Number DE91625395. Source: OSTI; NTIS (US Sales Only); INIS.

In the framework of the minimal extended electroweak models inspired by superstrings, we evaluate the Z_1 boson hadronic and total decay widths, the values R ident to $\sigma(e^+e^- \to \text{hadrons})/\sigma_{pt}$ and R' ident to $\sigma(e^+e^- \to \text{hadrons})/\sigma(e^+e^- \to l^+l^-)$ dependences on Z - Z' mixing parameter and on renormalization scheme parameters. All these values are measured now at LEP. Popular models are discussed for comparison. (author). 23 refs, 6 figs.

15577 (IC–90/271) **Dynamical models of B ->phiJK*+.** Ward, B.F.L. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 11p. Contract DE-AC03-76F00515. (UTHEP–90-1001.). Order Number DE91625400. Source: OSTI; NTIS (US Sales Only); INIS.

An issue of some interest in the general theory of CP violation in B meson decay is the relative admixture of even and odd final CP eigenstates in B ->phi/JK*+. For example, dominance of one sign of CP in this decay would increase the available modes for measuring the CP violation in the respective B meson decays in a beauty factory by a factor ~ 2.5 and, hence, would decrease the luminosity requirements for such a factory from the CP violation perspective. Here, we therefore study this relative admixture in several dynamical models of the respective decay. We are encouraged by our findings. (author). 12 refs, 3 figs.

15578 (IC–90/297) **A general analysis on a complete determination of the 3-vector-boson couplings.** Chen Yuqi (International Centre for Theoretical Physics, Trieste (Italy)); Chang Chaohsi. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 7p. Order Number DE91625381. Source: OSTI; NTIS (US Sales Only); INIS.

Starting from Lorenz invariance and CPT invariance, we write down the most general effective Lagrangian L_{eff} corresponding to the three-vector-boson couplings which are given completely in the Standard Model. 8 refs.

15579 (IC–90/337) **Instantons and charmed baryon mass splittings.** Dey, J. (International Centre for Theoretical Physics, Trieste (Italy)); Dey, M.; Volkovitsky, P. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 5p. Order Number DE91625401. Source: OSTI; NTIS (US Sales Only); INIS.

Masses of baryons with one charmed valence quark are calculated using the approach of Shuryak and Rosner. In their model the masses of vector and scalar diquarks inside baryons are different. It is shown that the parameters of this model for charmed baryons should differ from non-charmed baryons. In the family of such single charmed baryons we predict at least one baryon Ω_c^*, which should decay with the emission of photons, while the rest with $J^P=3/2(\Sigma_c^*$ and $\gamma_c^*)$ might decay via strong interaction with the emission of pions. A generalization of the Gell-Mann Okubo relation and the masses of the single charmed baryons are predicted. (author). 4 refs.

15580 (IC–90/349) **Present status of SU(5)-based grand unifications.** Ahmad, S.M.W. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 13p. Order Number DE91625414. Source: OSTI; NTIS (US Sales Only); INIS.

This paper is a brief communique on the Georgi-Glashow SU(5) paper: Unity of all Elementary Forces, published in 1974; and the

other more important papers based on SU(5) or linked with the Georgi-Glashow paper which was welcomed by many a theoretical physicist as a great step. At the end of the paper, a concise review of the experiments (in operation) and the proposed ones is given. (author). 22 refs.

15581 (IFVE-OEF-OEIUNK–89-192) **Search for rare radiative decay D/f_1(1285)->rho-γ.** Bityukov, S.I. (and others); Dorofeev, V.A.; Dzhelyadin, R.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 8p. Order Number DE91625396. Source: OSTI; NTIS (US Sales Only); INIS.

Search for the rare radiative decay D/f_1(1285)->rho-γ has been carried out. The experimental data have compared with the prediction of different theoretical models and the value for the mixing angle in the nonet of axial-vector mesons is estimated to be: /a/ >17 deg.

15582 (IFVE-OEIUNK–89-200) **K_s^0-regeneration at the UNK energies.** Shelkovenko, A.N. (AN Ukrainskoj SSR, Kiev (Ukrainian SSR). Inst. Teoreticheskoj Fiziki); Struminskij, B.V. Submitted to the journal Phys. Letters.

A contribution of bare odderon as the reggezied three-gluon exchange to K_s^0-regeneration amplitudes f_{21} on hydrogen is estimated. At the UNK energies odderon is shown to manifest itself mainly in the phase ϕ_{21}, yielding about 20 deg. 19 refs.; 6 figs.

15583 (IFVE-OTF–89-175) **Some properties of vector gluinonium.** Kartvelishvili, V.G.; Tkabladze, A.V.; Chikovani, E.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 8p. (In Russian). Order Number DE91623905. Source: OSTI; NTIS (US Sales Only); INIS.

Strong radiation transitions between the levels of the gluonic bound states are considered. The decay probability for vector gluinonium into Z-bozon and has calculated, and the possibility to observe this state in the Z-bozon and gluon jet.

15584 (IFVE-OTF–89-216) **Transverse part of qusrk-gluon vertex function and quark propagator in infrared region.** Arbuzov, B.A.; Davydychev, A.I.; Kurennoj, S.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 20p. (In Russian). Order Number DE91623906. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the journal Nuovo Cimento.

The Schwinger-Dyson equation for the quark propagator in QCD infrared region is investigated with due regard for gauge identity. The examples of possible transversal arbitrariness in part of the vertex are shown to be able to influence transverse the properties of the solutions is obtained. A class of the solutions, which have massive poles with the mass m, is investigated by the effective potential method. It is shown that starting from some value of the quark bare mass m_0 the solutions with m-:o become energy-preferable. 24 refs.

15585 (INIS-SU–237, pp. 6-7) **Effects of collective neutrinos emission.** Goncharov, N.V. (AN SSSR, Moscow (USSR). Inst. Obshchej Fiziki); Polyanskij, V.V. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989. 58p. (In Russian). In *Experimental and theoretical physics: Collection.* Order Number DE91003081. Source: OSTI; NTIS (US Sales Only); INIS.

Possibility of correlative pion decays is considered. A model problem on time evolution of neutrinos number from decay of N_0 π pions, being in V volume, taking into account a weak interparticle interaction, is solved. The reference point is $\pi^+\mu^+\nu_\mu$ sector of weak hamiltoanian (i.e. considered is $\pi^+ \rightarrow \mu^+ + \nu_\mu$ channel). Concurrence of the effects of collective neutrinos emission and their Fermi repulsion is possible at high density of initial particles. It may cause neutinos density oscillations. 3 refs.

15586 (INIS-SU–237, pp. 45-47) **Confinement and hadron production at large angles.** Dremin, I.M.; Nazirov, M.T. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989. 58p. (In Russian). In *Experimental and theoretical physics: Collection.* Order Number DE91003081. Source: OSTI; NTIS (US Sales Only); INIS.

Differences in angular distributions of secondary hadrons in pp and pp-bar interactions in frames of hadron production model, taking into account quark confinement, are predicted. Supposition on confinement role in hadron processes causes production of hadron jets at large angles. Difference of secondary hadron pseudorapidity distributions is expressed in presence of double-peaked spectrum in pp and its absence in pp-bar interactions. Normalized pseudofast distributions don't depend on colliding hadron initial energy. The above mentioned effects are connected with hypothesis on finiteness of l_c lengths and vanish at $l_c \rightarrow \infty$. 7 refs.; 2 figs.

15587 (INIS-SU–238/A, pp. 3-5) **On composition of strange quarks in nucleon.** Efrosinin, V.P. (AN SSSR, Moscow (USSR). Inst. Yadernykh Issledovanij). AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989. 56p. (In Russian). In *Plasma physics: Collection.* Order Number DE91003082. Source: OSTI; NTIS (US Sales Only); INIS.

Evaluation of parameter of Okubo-Zweig-Iizuki rule violation is obtained using the results of a potential model of component quarks and Nambu-Ion-Laginyo generalized model. 10 refs.

15588 (INIS-SU–239, pp. 3-6) **On one simple method of testing scaling character of particle multiple production models in high and superhigh hadron interactions.** Smirnova, M.D.; Smorodin, Yu.A. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989. 44p. (In Russian). In *Quantum radiophysics: Collection.* Order Number DE91003091. Source: OSTI; NTIS (US Sales Only); INIS.

Method of testing scaling character of inclusive distributions in processes of multiple production of particles on the basis of muoin data is suggested. testing is carried out by integral distribution moments and doesn't require calculation of radiation passage through atmosphere. 12 refs., 1 tab.

15589 (INIS-SU–241, pp. 17-21) **Optimal choice of basis functions in the linear regression analysis.** Khotinskij, A.M. Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1988. 86p. (In Russian). In *Techniques and computer codes for numerical solution of mathematical physics problems: Scientific-technical collection.* Order Number DE91003080. Source: OSTI; NTIS (US Sales Only); INIS.

Problem of optimal choice of basis functions in the linear regression analysis is investigated. Step algorithm with estimation of its efficiency, which holds true at finite number of measurements, is suggested. Conditions, providing the probability of correct choice close to 1 are formulated. Application of the step algorithm to analysis of decay curves is substantiated. 8 refs.

15590 (ITEF–143-89) **Diffractive NN-scattering in theory with subcritical pomeron.** Mamkin, O.Yu.; Ponomarev, L.A.; Tarasov, V.E. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. (In Russian). Order Number DE91623910. Source: OSTI; NTIS (US Sales Only); INIS.

Model for amplitude of NN scattering was considered within the framework of Regge scheme with suferitical pomeron. Contribution of processes of diffractive dissociation (DD) in intermediate states was taken into account. Consideration of DD processes in hadron beams of small masses was performed on the basis of Deck model and in the region of large mass by means of summation of intensified diagrams. Cooperative description of the data on total and elastic cross sections and cross sections of single DD in NN interactions at energies of ISR and Spp-barS-collider was conducted. Predictions for cross sections of processes of binary DD, binary pomeron exchange etc. are given. Predictions for various cross sections at higher energies (the region of cosmic data and higher) were made. 24 refs.; 15 figs.

15591 (ITEP–126-89) **Quark-meson mechanism of nucleons weak interaction: effects of antisymmetrization.** Grach, I.L.; Shmatikov, M.Zh. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 24p. Order Number DE91623911. Source: OSTI; NTIS (US Sales Only); INIS.

The mechanism of pairwise quarks' weak interactions due to the one-boson exchanges is considered. The contribution of this mechanism to the longitudinal analyzing power A_L in the low-energy pp-scattering is calculated. The dominant (isoscalar) component of the weak qq-interaction is approximated by the exchange of ρ- and ω-mesons. The strong interaction of quarks is described by means of the potential model. The antisymmetrization effects resulting from the interchange of quarks between nucleons prove to be small ($\lesssim$20+30%). At the same time the calculated value of A_L has the wrong sign implying that the dominant contribution comes from the three-particle quark forces. 15 refs.; 4 figs.

15592 (ITEP–169-89) **Precession of quarks spins in QCD-string model.** Kobzarev, I.Yu.; Martem'yanov, B.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 6p. Order Number DE91623912. Source: OSTI; NTIS (US Sales Only); INIS.

It is argued that precession of quarks spins localized on the ends of rotating QCD-string is defined by Thomas effect only when the string cross section goes to zero. 15 refs.

15593 (ITEP–172-89) **Gluonic excitation in the toronic vacuum.** Pochinskij, A.V.; Simonov, Yu.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 20p. Order Number DE91623913. Source: OSTI; NTIS (US Sales Only); INIS.

The model of the QCD vacuum consisting of toron-antitoron domain structure is suggested. The spectrum of the gluon excitation in SU(2) QCD is obtained. It is shown that in the case of statistical independence of the fields in domains confinement may appear. Arguments in favour of domain structure of vacuum are given from the point of the minimum of free energy. 19 refs.; 3 figs.

15594 (ITEP–174-89) **Three-quark forces and the role of meson exchanges in weak NN interaction.** Grach, I.; Shmatikov, M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 21p. Order Number DE91623914. Source: OSTI; NTIS (US Sales Only); INIS.

The contribution of weak three-quark forces involving meson exchanges to the longitudinal analyzing power A_L in the low-energy pp-scattering is calculated. The nonrelativistic potential model is used for the desorption of strong quark interactions while their weak coupling is described by the Weinberg-Salam lagrangian. The dominant mechanism of parity violation in the NN system (provided the one-pion exchange is forbidden by selection rules) is the contact interaction of quarks. 17 refs.; 3 figs.

15595 (LIYaF–1514) **Six-quark system and algebraic version of resonating-group method. Part 2: 2.Integral kernels and generating matrix elements of potential and kinetic energies.** Smirnov, Yu.F.; Stotland, L.Ya.; Kharitonov, Yu.I. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 56p. (In Russian). Order Number DE91625402. Source: OSTI; NTIS (US Sales Only); INIS.

This paper is a continuation of earlier paper devoted to the application of the RGM algebraic version in the quark cluster model of the baryon-baryon scattering. For the 3q+3q system the RGM integral kernels of the potential and kinetic energy are obtained. The consideration is limited by 3q-clusters with configuration s^3. The color-electric and color-magnetic qq-forces are taken into account. The generating matrix elements are found that allow to calculate the total matrix of the RGM Hamiltonian in the basis of harmonic oscillator wave functions. 15 refs.; 15 tabs.

15596 (LIYaF–1567) **Conformal invariance and pion wave functions of nonleading twist.** Braun, V.M.; Filyanov, I.E. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 32p. Order Number DE91623915. Source: OSTI; NTIS (US Sales Only); INIS.

The restrictions are studied for the general structure of pion wave functions of twist 3 and twist 4 imposed by the conformal symmetry and the equations of motion. A systematic expansion of wave functions in the conformal spin is built and the first order corrections to asymptotic formulae are calculated by the QCD sum rule method. In particular, we have found a multiplicatively renormalizable contribution into the two-particle wave function of twist 4 which cannot be expanded in a finite set of Gegenbauer polynomials. 19 refs.; 5 figs.

15597 (LU-TP–90-4) **Fluctuations and anomalous dimensions in QCD cascades.** Andersson, B.; Gustafson, G.; Nilsson, A.; Sjoegren, C. Lund Univ. (Sweden). Dept. of Theoretical Physics. Apr 1990. 23p. Order Number DE91625404. Source: OSTI; NTIS (US Sales Only); INIS.

A recently proposed multiplicity measure is used to study the properties of QCD cascades. We show that it is possible to define anomalous dimensions locally in rapidity space for the QCD cascade in e^+e^- annihilation events and in deep inelastic lepton scattering. In this way it will be possible to differ between different suggested models for multiple gluon emission. We also show that the properties of an event are to a surprisingly large degree determined by the first one or two gluons. Thus e.g. the multiplicity fluctuations in e^+e^- annihilation at the Z^0-pole are to about 90% determined by the hardest gluon. This implies that it may be principally difficult to make a distinct separation between the hard perturbative phase and the soft hadronization phase. (authors).

15598 (LU-TP–90-7) **Fractal structures and intermittency in perturbative QCD cascades.** Gustafson, G.; Nilsson, A. Lund Univ. (Sweden). Dept. of Theoretical Physics. May 1990. 13p. Order Number DE91625405. Source: OSTI; NTIS (US Sales Only); INIS.

New results are presented for fractal structures and intermittency in QCD parton showers. The particle momenta define a fractal curve in energy-momentum space with a dimension $1 + \sqrt{3\alpha_s/2\pi}$. This gives a geometrical interpretation of the anomalous dimension in QCD. For the distribution in smaller angular region we see that the corresponding multifractal dimension are the same if we bin in γ or phi or do a two-dimensional analysis in γ and phi. (author).

15599 (LU-TP–90-11) **Intermittency in e^+e^- -annihilation at PEP-PETRA energies.** Gustafson, G.; Sjoegren, C. Lund Univ. (Sweden). Dept. of Theoretical Physics. Jun 1990. 13p. Order Number DE91625403. Source: OSTI; NTIS (US Sales Only); INIS.

Data on multiplicity moments in small rapidity windows can be reproduced in the string fragmentation model if the properties of directly produced pions are taken properly into account. The direct pions resolve the underlying parton structure better than the more massive resonances. From the tunneling production mechanism these pions are supposed to have smaller transverse rho than other particles, a property which has been neglected in the MC programs. This can also explain the high K/π ratio observed at large transverse rho in pp-collisions. We also find that the result is sensitive to the cut-off for the perturbative QCD cascade. If α_s is allowed to grow like 1/ln(transverse κ^2/Λ^2) a small value for the cut-off implies that the perturbative treatment is not appropriate. In this case the state becomes too chaotic. (authors).

15600 (NBI-HE–90-73) **W-condensate formation in high energy collisions.** Ambjoern, J.; Olesen, P. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 11p. Order Number DE91623883. Source: OSTI; NTIS (US Sales Only); INIS.

We point out that there exists the possibility that a W- and Z-condensate is formed at LHC and SSC collider energies. The condensate can be triggered by the strong transient magnetic fields present during the collision, and/or by creation of magnetic flux tubes in weak interactions. The condensate is assumed to be metastable, and decays into W's, Z's, leptons and/or quarks. Thus it should show up in an anomalous production of these particles. (orig.).

15601 (NIKHEF-H–90-19) **QCD radiative corrections to charged current heavy quark production.** Bij, J.J. van der (Amsterdam Univ. (Netherlands). Inst. voor Theoretische Fysica); Oldenborgh, G.J. van. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Nov 1990. 17p. Order Number DE91623896. Source: OSTI; NTIS (US Sales Only); INIS.

The QCD radiative corrections to charged current heavy quark production are given in the limit that the weak partner is massless,

i.e. using a bottom structure function for top quark production. The results for charm production in neutrino nucleon scattering agree with those published before, but our method enables us to study all outgoing particles. The corrections to top production at the proposed LEP/LHC electron-proton collider are discussed. (author). 18 refs.; 6 figs.; 2 tabs.

15602 (NIKHEF-H-90-20) **Sphalerons and energy barriers in the Weinberg-Salam theory.** Klinkhamer, F.R. (CHEAF, Amsterdam (Netherlands)). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Oct 1990. 7p. (CONF-900822--: 25. IUPAP international conference on high energy physics, Singapore (Singapore), 2-8 Aug 1990). Order Number DE91625382. Source: OSTI; NTIS (US Sales Only); INIS.

To appear in: Proceedings of the 25th International conference on high energy physics, Singapore 2-8 August 1990 / K.K. Phua and Y. Yamaguchi (eds.).

The author discusses some recent results regarding non-trivial structure in the configuration space of the electro-weak standard and related classical solutions (sphalerons). (author). 17 refs.; 5 figs.

15603 (NIKHEF-H-90-22) **On the electrodynamics of spinning particles.** Holten, J.W. van (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 5 Dec 1990. 28p. Order Number DE91625397. Source: OSTI; NTIS (US Sales Only); INIS.

The electrodynamics of spinning point particles is considered. A modification of the Lorentz force law is introduced which can be interpreted as a classical limit of the Dirac-Klein-Gordon equation. An improved version of the inhomogeneous Maxwell equations is constructed to describe the classical fields of spinning particles. Both classical and quantum electrodynamics are shown to predict relativistic time-dilatation effects for spinning particles in an electromagnetic field, even in the limit of zero velocity. The life-time of unstable charged particles moving in a Coulomb field is computed for both spin-zero and spin-half particles. Comparison shows spin effects to be present but relatively small. The magnitude of further spin-dependent correction from hyperfine interactions is computed. A measurement of the life-time of muons in atomic bound states separated by such spin-dependent hyperfine interactions would provide a clean test for the effect predicted. Similar effects are shown to arise in non-abelian gauge theories such as QCD. (author). 18 refs.

15604 (NIKHEF-H-90-23) **The α^3_S corrections to the Bjorken sum rule for polarized electro-production and to the Gross-Llewellyn Smith sum rule.** Larin, S.A. (Academy of Sciences, Moscow (USSR). Institute for Nuclear Research); Vermaseren, J.A.M. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. 1990. 15p. Order Number DE91625383. Source: OSTI; NTIS (US Sales Only); INIS.

Includes report NIKHEF-H-90-18: The α^3_S correction to the Bjorken sum rule / by S.A. Larin; F.V. Tkachov (Academy of Sciences, Moscow (USSR). Institute for Nuclear Research); J.A.M. Vermaseren (4399930NL). - 4 p. - 12 refs.

The next-next-to-leading order QCD corrections to the Gross-Llewellyn Smith sum rule for deep inelastic neutrino-nucleon scattering and to the Bjorken sum rule for polarized electron-nucleon scattering have been computed. This involved the proper treatment of γ_5 inside the loop integrals with dimensional regularization. It is found that the difference between the two sum rules are entirely due to a class of 6 three loop graphs and is of the order of 1% of the leading QCD term. Hence the Q^2 behavior of both sum rules should be the same if the physics is described adequately by the lower order terms of perturbative QCD. (author). 12 refs.; 2 figs.; 4 tabs. Includes report NIKHEF-H-90-18: The α^3_S correction to the Bjorken sum rule /by S.A. Larin; F.V. Tkachov (Academy of Sciences, Moscow (USSR). Institute for Nuclear Research); J.A.M. Vermaseren (4399930NL). - 4 p. - 12 refs.

15605 (OUP-90-26) **Direct CP violation in $K_{L,S} \rightarrow 2\gamma$ transitions for an arbitrary mass.** Eeg, J.O. (Oslo Univ. (Norway). Fysisk Inst.); Nizic, B.; Picek, I. Oslo Univ. (Norway). Fysisk Inst. Oct 1990. 8p. Order Number DE91623884. Source: OSTI; NTIS (US Sales Only); INIS.

Short-distance contributions to K° (anti K°) $\rightarrow \gamma\gamma$ with the standard model for large m_t, including QCD corrections, are studied. Owing to a relaxed GIM suppression, CP violation in the decay amplitude turns out to be more important than previously thought and might be of order 20% of that coming from the mass matrix. This leads to rare $K_{L,S} \rightarrow \gamma\gamma$ decays as potentially interesting candidates for testing direct CP violation at LEAR and Φ factories. Still, it does not seem to be achievable by the luminosities foreseeable for forthcoming Φ factories. 12 refs., 2 figs.

15606 (OUP-90-32) **Contribution to $\Lambda^+_c \rightarrow \phi\Sigma$, $\phi\Lambda$ and p anti K° from excited states.** Turan, G.; Eeg, J.O. Oslo Univ. (Norway). Fysisk Inst. Dec 1990. 19p. Order Number DE91623885. Source: OSTI; NTIS (US Sales Only); INIS.

Contributions to $\Lambda_c^+ \rightarrow \phi\Sigma$, $\phi\Lambda$ and p anti K° from excited states are considered. The calculations are performed within the MIT-bag model and a Heavy Quark bag model. Because the mass of Λ_c^+ is rather big compared to the strange baryons, excited baryon states with mass close to that of Λ_c^+ in some cases give significant pole contributions to the decay amplitudes of Λ_c^+. 20 refs., 3 tabs.

15607 (RAL-90-079) **Five jet production in e^+e^- annihilation above the W^+W^- threshold.** Brown, N. Rutherford Appleton Lab., Chilton (UK). Nov 1990. 10p. Order Number DE91623886. Source: OSTI; NTIS (US Sales Only); INIS.

Above the W^+W^- threshold, gluon bremsstrahlung from the decay of W bosons into quark pairs gives rise to five jet configurations. At lowest quantum chromodynamic order this dominates over the point like five jet production, and allows the hadronic decays of the W to be tested with QCD. Some results for integrated cross-sections and jet distributions are given. (author).

15608 (RAL-90-080) **Cross sections for five jet production above the W^+W^- threshold in e^+e^- annihilation.** Brown, N. Rutherford Appleton Lab., Chilton (UK). Nov 1990. 18p. Order Number DE91623887. Source: OSTI; NTIS (US Sales Only); INIS.

We describe the calculation of five jet production from the W^+W^- intermediate state in e^+e^- annihilation in lowest order quantum chromodynamics. Some results for integrated Cross-sections are presented. (author).

15609 (SSCL-373) **From QCD to Chiral Dynamics: A smooth transition.** Morozumi, T. (Rockefeller Univ., New York, NY (USA)); Rebelo, M.N.; Sanda, A.I. Superconducting Super Collider Lab., Dallas, TX (USA). Mar 1991. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-89ER40486. Order Number DE91011001. Source: OSTI; NTIS; INIS; GPO Dep.

We study the transition from perturbative QCD to Chiral Dynamics (linear σ model), which describe physics between M_W and μ, and between μ and M_π, respectively. This is done within the context of K decays. The smoothness of the transition is shown by comparing the explicit form of the anomalous dimension matrices in both pictures and by checking the approximate cancellation of the μ dependence. 6 refs., 2 figs.

15610 (USIP-90-03) **Democratic Monte-Carlo generation of hadronic fragments with conserved momentum.** Berggren, M. Stockholm Univ. (Sweden). Inst. of Physics. Sep 1990. 15p. Order Number DE91625406. Source: OSTI; NTIS (US Sales Only); INIS.

A general method to generate a set of random numbers, constrained by the requirement that their sum should vanish is presented. The numbers will be democratically generated, i.e. the distribution of each of them will be the same, as well as the correlation between any pair. It is also shown that this is not the case in a cascade model, were the constraint is fulfilled by calculating the last number from the sum of the others. The simultaneous distribution of the momenta is given in a closed form in the case where the individual momenta have gaussian distributions. (author).

15611 (DESY–90-161) **Spectrum of the effective SU(3)-hamiltonian in a small volume computed by path integral Monte Carlo.** Tiedemann, H. (Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Dec 1990. 18p. Order Number DE91768984. Source: OSTI; NTIS (US Sales Only); INIS.

Using a simple Monte Carlo integration method for quantum mechanical problems on a 'time lattice' the massgaps of the low lying states of Luescher's effective hamiltonian with and without massless fermions for a small volume are computed. While there is good agreement between this method and previous Rayleigh-Ritz type calculations in the case of SU(2), no-table differences are found in the case of SU(3) for most states. The statistical and systematic errors are competitive with those of the variational method. Having no dependence on basis set size the Monte Carlo method is a good alternative to the Rayleigh-Ritz calculations also for SU(3). An extension of the method to intermediate volumes including fermions is definitively possible. (orig.).

Source: OSTI; NTIS; INIS; GPO Dep.

The existence of a new, non-perturbative phase of QED as indicated by studies of Schwinger-Dyson equations and lattice calculations. The crucial question is whether the phase transition point can be driven down to $\alpha \sim 1/137$ presumably by appropriate background fields. It appears that magnetic fields potentially can induce such a phase transition. Our investigation is related to our original conjecture that the anomalous e^+e^- events at GSI are due to the decay of a new positronium system formed in the new QED phase which is induced by the electromagnetic fields of the heavy-ions. 25 refs.

15614 (DESY–90-118) **QED at strong coupling.** Schierholz, G. (Hoechstleistungsrechenzentrum (HLRZ), Juelich (Germany, F.R.). Gruppe Theorie der Elementarteilchen). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 20p. (CONF-9007180–: 1990 international workshop on strong coupling gauge theories and beyond, Nagoya (Japan), 28-31 Jul 1990; HLRZ–90-080). Order Number DE91764666. Source: OSTI; NTIS (US Sales Only); INIS.

One of the most fundamental questions in field theory is whether QED has a non-trivial continuum limit. In this talk I shall review recent lattice work which addresses this problem. The key-issue is the determination of the renormalization group flow and the derivation of the Callan-Symanzik β-function. The β-function does not show an ultra-violet stable zero, but is consistent with the prediction of renormalized perturbation theory. This indicates triviality. The question to what extent QED is a valid low-energy theory is raised. Furthermore, the anomalous dimension and the critical exponents of the fermion mass operator are examined. (orig.).

(SCRI)); Hasenbusch, M.; Marcu, M. Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Oct 1990. 11p. Grant GIF I-131-095.07/89;GIF 517/89. (TAUP–1836-90). Order Number DE91764659. Source: OSTI; NTIS (US Sales Only); INIS.

We present new Monte Carlo cluster algorithms which eliminate critical slowing down in the simulation of solid-on-solid models. In this letter we focus on the two-dimensional discrete Gaussian model. The algorithms are based on reflecting the integer valued spin variables with respect to appropriately chosen reflection planes. The proper choice of the reflection plane turns out to be crucial in order to obtain a small dynamical exponent z. Actually, the successful versions of our algorithm are a mixture of two different procedures for choosing the reflection plane, one of them ergodic but slow, the other one non-ergodic and also slow when combined with a Metropolis algorithm. (orig.).

15616 (DESY–90-158) **Projective block spin transformations in lattice gauge theories.** Kalkreuter, T. (Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.). Dec 1990. 27p. Order Number DE91768987. Source: OSTI; NTIS (US Sales Only); INIS.

A block spin definition for Higgs fields and non-Abelian lattice gauge fields is examined which is in the spirit of the projective multigrid procedure of Brower, Rebbi and Vicari. The block spin transformation involves a gauge covariant kernel C which makes the fine to coarse transition, and a kernel A which makes the coarse to fine interpolation. These kernels could be used in a projective multigrid computation of propagators, for instance. Vectorizable algorithms for the computation of C and A are presented. For SU(2) lattice gauge theory in 4 dimensions, the required CPU time for computing C or A on the whole lattice is comparable to that for one standard Monte Carlo sweep through the lattice. Numerical results obtained after performing one blocking transformation from a 9^4 to a 3^4 lattice are presented. The block spin computation yields auxiliary quantities of interest, such as the lowest eigenvalues λ_0, λ_0' of the negative gauge covariant Laplacian with Neumann and Dirichlet boundary conditions on block boundaries. λ_0 and λ_0' are measures of disorder and their renormalization group flow is therefore instructive. (orig.).

(CONF-901072–: LATTICE '90: 7th international lattice gauge theory conference, Tallahassee, FL (USA), 8-12 Oct 1990; HLRZ–90-101). Order Number DE91768983. Source: OSTI; NTIS (US Sales Only); INIS.

In this talk I review recent lattice work on the ultra-violet behavior of QED. Of particular interest is the question whether QED has a non-trivial continuum limit or not. (orig.).

15618 (IAE–4948-1) **Expansion of the transformations of reciprocal radius-vectors into a set of transformations belonging to the Weyl group: Conformal dimension of electromagnetic field.** Kotel'nikov, G.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 7p. (In Russian). Order Number DE91623503. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the transformations of reciprocal radius-vectors can be expanded into four sets of transformations belonging to the Weyl group. The formulas of the transformation of the components of electromagnetic field, current and charge densities as well as potentials for the case of two-charge electrodynamics are given. The conform dimensionality is 0 for the electromagnetic charges, -1 for the potentials, -2 for the fields, -3 for the current and charge densities, -4 for the difference of the squares of fields. The electromagnetic charges are transformed so that of one if them is scalar, other is pseudoscalar. The difference in their transformation properties means that the electric charge will not interact with the fields of the magnetic charge and vice versa. This can be a reason of the unsuccessful attempts to register the Dirac monopole. 12 refs.

15619 (IC–90/208) **Field theory approach to quantum hall effect.** Cabo, A. (International Centre for Theoretical Physics, Trieste (Italy)); Chaichian, M. International Centre for Theoretical Physics, Trieste (Italy). Jul 1990. 20p. (CERN-TH–5869/90.). Order Number DE91625215. Source: OSTI; NTIS (US Sales Only); INIS.

The Fradkin's formulation of statistical field theory is applied to the Coulomb interacting electron gas in a magnetic field. The electrons are confined to a plane in normal 3D-space and also interact with the physical 3D-electromagnetic field. The magnetic translation group (MTG) Ward identities are derived. Using them it is shown that the exact electron propagator is diagonalized in the basis of the wave functions of the free electron in a magnetic field whenever the MTG is unbroken. The general tensor structure of the polarization operator is obtained and used to show that the Chern-Simons action always describes the Hall effect properties of the system. A general proof of the Streda formula for the Hall conductivity is presented. It follows that the coefficient of the Chern-Simons terms in the long-wavelength approximation is exactly given by this relation. Such a formula, expressing the Hall conductivity as a simple derivative, in combination with diagonal form of the full propagator allows to obtain a simple expressions for the filling factor and the Hall conductivity. Indeed, these results, after assuming that the chemical potential lies in a gap of the density of states, lead to the conclusion that the Hall conductivity is given without corrections by $\sigma_{xy} = \nu e^2/h$ where ν is the filling factor. In addition it follows that the filling factor is independent of the magnetic field if the chemical potential remains in the gap. (author). 21 ref, 1 fig.

15620 (IC–90/235) **Has the classical vacuum a conformal structure?.** Culetu, H. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 6p. Order Number DE91625216. Source: OSTI; NTIS (US Sales Only); INIS.

A possible existence of a conformal perfect fluid in the classical vacuum is investigated in this letter. It is shown, contrary to Madsen's opinion, that the scalar field stress tensor acquires a perfect fluid form even with a non-minimal coupling ($\xi = 1/6$), provided the geometry is the conformally flat Hawking wormhole. It is found that the flow vector U^μ does not vanish far from the light cone, even if the scalar field becomes constant. (author). 10 refs.

15621 (IC–90/278) **On the zero mode of the Poisson gauge theory.** Saidi, E.H. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 11p. Order Number DE91625217. Source: OSTI; NTIS (US Sales Only); INIS.

The fundamentals of the Diff(S^2) and the SDiff(S^2) gauge theories are developed. It is shown that the adjoint representation of SU(∞) is described by a divergentless two dimensional vector field defined on the sphere. The SU(∞) Yang-Mills gauge action obtained earlier by Floratos et al. is reviewed. The problem of the zero modes is solved without need of any constraint. The fundamental representations of SU(∞) and the gauge matter couplings are discussed. (author). 6 refs.

15622 (IFVE-OTF–89-176) **The Gaussian effective potential method and Higgs sector in some grand unification models.** Klimenko, K.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 19p. Order Number DE91623504. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the journal Zeit.fur Physik c.

The quantum theories where scalar fields are transformed over (1) adjoint and vector representations of the O(N) group, and (2) adjoint and fundamental representations of the SU(N) group, are investigated with aid of Gaussian effective potential method. It is shown, that there exist autonomous phases with spontaneous breaking of the initial symmetry. refs. 13.

15623 (IFVE-OTF–89-204) **The supersymmetric vector-like horizontal model with intermediate symmetry breaking scale.** Amaglobeli, A.N. (AN Gruzinskoj SSR, Tbilisi (USSR). Tbilisskij Matematicheskij Inst.); Kereselidze, A.R.; Lipparteliani, A.G.; Volkov, G.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 10p. Order Number DE91623505. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the journal Physics. Letters.

The supersymmetric version of vector-like horizontal gauge interactions is considered. Several symmetry breaking schemes are studied. Our analysis shows that the current experimental data for rare decays still leave a possibility for low-scale horizontal gauge bosons (1-10 TeV) and gauginos (0.25-0.5 TeV) to exist. 13 refs.

15624 (INIS-SU–232, pp. 21-27) **Dirac equation in Foldy-Wouthuysen representation (expansion in terms of charge e powers).** Neznamov, V.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1988. 43p. (In Russian). In *Theoretical and applied physics: Scientific-technical collection.* Order Number DE91003077. Source: OSTI; NTIS (US Sales Only); INIS.

Formalism of deriving Dirac equation in Foldy-Wouthuysen representation in the form of a series of e charge powers with the presence of common external electromagnetic field is described. Method for producing an unitary transformation matrix U'_{FW} and a two-component Hamiltonian H'_{FW} is presented. In the obvious force H'_{FW} Hamiltonian is extracted up to $\approx e^2$ terms inclusive. Some limiting cases are discussed. 4 refs.

15625 (INS–860) **Topological pregauge-pregeometry.** Akama, Keiichi (Saitama Medical Coll., Moroyama (Japan)); Oda, Ichiro. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Dec 1990. 14p. Order Number DE91767972. Source: OSTI; NTIS (US Sales Only); INIS.

The pregauge-pregeometric action, i.e. the fundamental matter action whose quantum fluctuations give rise to the Einstein-Hilbert and the Yang-Mills actions is investigated from the viewpoint of the topological field theory. We show that the scalar pregauge-pregeometric action is a topological invariant for appropriate choices of the internal gauge group. This model realizes the picture that the gravitational and internal gauge theory at the low energy scale is induced as the quantum effects of the topological field theory at the Planck scale. (author).

15626 (ITEP–101-89) **Green's functions of solitons in heat bath.** Smilga, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. Order Number DE91623507. Source: OSTI; NTIS (US Sales Only); INIS.

Soliton Green's functions at nonzero temperature are studied. Considering various model example it is shown that the Green's function pole position does not coincide generally speaking with free energy of a soliton. The Froelich polaron and the t'Hooft-Polyakov monopole the Green's function for which is in general a poorly defined concept as it involves an infinite imaginary part connected to the infinite total cross section of monopole scattering by electric charge are discussed. The pole position of the Green's function of the collective sphaleron excitation in the Glashow-Weinberg-Salem model does not as well coincide with the sphaleron free energy. 24 refs.; 9 figs.

15627 (ITEP–112-89) **Conformal field theory and 2D critical phenomena. Part 1: 1.Algebra of local fields.** Zamolodchikov, A.B.; Zamolodchikov, Al.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. Order Number DE91625218. Source: OSTI; NTIS (US Sales Only); INIS.

Review of the recent developments in the two-dimensional conformal field theory and especially its applications to the physics of 2D critical phenomena is given. It includes the Ising model, the Potts model. Minimal models, corresponding to theories invariant under higher symmetries, such as superconformal theories, parafermionic theories and theories with current and W-algebras are also discussed. Non-hamiltonian approach to two-dimensional field theory is formulated. 126 refs.

15628 (ITEP–144-89) **Thermodynamic Bethe anzats in relativistic models: Scaling 3-state Potts and Lee-Yang models.** Zamolodchikov, Al.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. Order Number DE91623508. Source: OSTI; NTIS (US Sales Only); INIS.

Two integrable 2D relativistic field theory models are studied by the thermodynamic Bethe anzats method. One of them describes the scaling limit $T \to T_c$ of the 3-state Potts model and the other corresponds to the scaling region near the Lee-Yang singularity of the 2D Ising model. The finite volume ground state energy of these two theories is calculated numerically using the integral equations of the temperature Bethe anzats approach. Numerical results are compared with the perturbations near the corresponding conformal theories. 18 refs.; 5 figs.

15629 (ITEP–146-89) **A note on W_3-algebra.** Marshakov, A.; Morozov, A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 16p. Order Number DE91623509. Source: OSTI; NTIS (US Sales Only); INIS.

A reduced SL(3) Wess-Zumino-Witten model realized in terms of two free fields which posesses SL(3) invariance is considered. The operators W_2 and W_3 of refs. (1,2,3) are the Noether currents of this theory. This is direct generalization of the SL(2) case (two-dimensional gravity). 12 refs.; 1 fig.

15630 (ITEP–154-89) **Straightforward proof of Lechtenfeld's formula for β,γ-correlator.** Morozov, A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. Order Number DE91623510. Source: OSTI; NTIS (US Sales Only); INIS.

General method of evaluation of correlators of bosonic $\beta\gamma$-fields with linear Lagrangian is applied to the derivation of Lechtenfeld's formula, important for development of the first-quantized formalism for superstring. 9 refs.

15631 (ITEP–155-89) **On a manifestation of the anomalies in the massless QED.** Gorskij, A.S. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. Order Number DE91625219. Source: OSTI; NTIS (US Sales Only); INIS.

The questions concerned with the axial and conformal anomalies in the massless QED are discussed. It is shown that the interaction of the longitudinal real photons is proportional to the β function of the theory and the corresponding matrix element $<\gamma^L|\Theta_{\alpha\beta}|\gamma^L>$ where $\Theta_{\alpha\beta}$ is energy-momentum tensor has a common features with the nonvanishing matrix element $<\gamma|A_\alpha|\gamma>$ in the massless limit. 7 refs.; 2 figs.

15632 (ITEP–161-89) **Truncated conformal space approach to scaling Lee-Yang model.** Yurov, V.P.; Zamolodchikov, Al.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. Order Number DE91623511. Source: OSTI; NTIS (US Sales Only); INIS.

A numerical approach to 2D relativstic field theories is suggested. Considering a field theory model as an ultraviolet conformal field theory perturbed by suitable relevant scalar operator one studies it in finite volume (on a circle). The perturbed Hamiltonian acts in the conformal field theory space of states and its matrix elements can be extracted from the conformal field theory. Truncation of the space at reasonable level results in a finite dimensional problem for numerical analyses. The nonunitary field theory with the ultraviolet region controlled by the minimal conformal theory $\mu(2/5)$ is studied in detail. 9 refs.; 17 figs.

15633 (ITEP–166-89) **Vortices on the string and superstring world sheets.** Abrikosov, A.A.; Kogan, Ya.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 36p. Order Number DE91623512. Source: OSTI; NTIS (US Sales Only); INIS.

The world-sheet dynamics of the first quantized string propagating in non-simply connected space is considered. Presence of the vortices on the world sheet lead to Berezinsky-Kosterlitz-Thouless(BKT) phase transition. Bosonic and superstring cases are discussed. 20 refs.; 2 figs.

15634 (ITEP–173-89) **Conformal field theory and 2-d critical phenomena. Part 2: 2.Renormalization group and conformal symmetry.** Zamolodchikov, A.B.; Zamolodchikov, Al.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 28p. Order Number DE91623513. Source: OSTI; NTIS (US Sales Only); INIS.

General properties of the renormalization group in 2D relativistic field theory are considered including the directed character of the renormalization group flow (c-theorem). In a fixed point of the renormalization group flow 2D field theory develops additional infinite dimensional space-time symmetry it becomes invariant under 2D conformal transformations. The appearance of Virasoro algebra in the fixed point conformal field theory is demonstrated and general properties of the conformal stress tensor are discussed. The decomposition of the conformal field theory space of states into Virasoro algebra irreducible representations is considered. 17 refs.

15635 (IYaF–89-31) **Preliminary results of searching for exotic long-range interaction violating T invariance.** Vorob'ev, P.V. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1989. 14p. (In Russian). Order Number DE91623514. Source: OSTI; NTIS (US Sales Only); INIS.

The preliminary experimental results of searching for exotic long-range interaction, violating T and P invariances, are described. Restrictions for the interaction constants are given. A possibility of sensitivity improvement in new experiments, prepared in the Institute of Nuclear Physics, is discussed. 16 refs.; 4 figs.; 5 tabs.

15636 (KEK–90-8) **A new techniques to deal with weakly non integrable Hamiltonians.** Hagel, J. National Lab. for High Energy Physics, Tsukuba, Ibaraki (Japan). Jun 1990. 28p. Order Number DE91767862. Source: OSTI; NTIS (US Sales Only); INIS.

New type of integration theory applicable to weakly non integrable Hamiltonians is introduced. It consists of reducing Hamiltons equations to a single linear partial differential equation containing a perturbation parameter which measures the strength of the non integrable part of the Hamiltonian. The solution of this equation leads immediately to a first integral of the underlying system. Because of the linearity of the partial differential equation perturbation theory leads to a very simple recurrence, which relates a given order solution to only the solution of the previous order unlikely to perturbation techniques being applied to nonlinear equations. The here presented techniques can be applied also to integrable Hamiltonians in which case the perturbation series truncates after some given order. This is the case for the example of the well known single resonance Hamiltonian. The theory then is applied to the non integrable case of the two-resonance Hamiltonian. In this case the perturbation series does not converge in general, but shows semi-convergent properties. (author).

15637 (NBI-HE–90-66) **Symmetry breaking as a consequence of stabilization of a bottomless theory.** Bogojevic, A.R. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 12p. Order Number DE91623515. Source: OSTI; NTIS (US Sales Only); INIS.

The Greensite-Halpern stabilization technique is applied to d=0 Euclidean field theories. The effective action is calculated using WKB as well as a variational approach. For a set of free theories with non-trivial measure the effective action is computed exactly, and a comparison is made with the results of approximate techniques. The effect of stabilization on the measure is to bring in a 'centrifugal barrier' term that breaks parity invariance. A model with quartic interaction of wrong sign is also analyzed in the limit of large coupling. (orig.).

15638 (NBI-HE–90-69) **1/N-expansions of σ-models in 2 and 4 dimensions: Taking them to their technical limits.** Flyvbjerg, H.; Larsen, F.; Kristjansen, C. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 4p. Order Number DE91623516. Source: OSTI; NTIS (US Sales Only); INIS.

The mass gap and the magnetic susceptibility of the non-linear σ-model in 2d are given as functions of β to three leading orders in 1/N up to correlation lengths 300-400. Our results agree with Monte Carlo results for $N \geq 3$, and, for large β, with recent Bethe ansatz results for the correlation length. With applications to the Higgs sector of the Standard Model in mind, we have tested the precision of the 1/N-expansion of the N-component ϕ^4 theory in 4d for N=4. In the theory's symmetric phase very satisfactory precision is obtained already to two leading orders in 1/N, except at very

strong coupling. In the physically interesting broken phase prospects are less encouraging. (orig.).

15639 (NBI-HE-90-70) **Interpolating between O(N)-symmetric σ-models with N=1,2,3.** Klomfass, M. (Florida State Univ., Tallahassee (USA). Supercomputer Computations Research Inst. (SCRI)); Heller, U.M.; Flyvbjerg, H. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 4p. Contract DE-FC05-85ER250000. Order Number DE91623517. Source: OSTI; NTIS (US Sales Only); INIS.

We interpolate between the O(N)- and the O(N-1)-symmetric non-linear σ-models with standard action by suppressing the Nth component of the N-vector field with a mass term. We find a critical line in the coupling-mass plane connecting the critical point of the Ising model (N=1) with the critical point of the XY-model (N=2). This line extends towards the region of non-monotonous behaviour of the β-function of the O(3)-symmetric model. The massless phase of the XY-model is separated from the ordered phase of the Ising model by a transition at zero mass, while it is separated from the only phase of the O(3)-model by a transition that seems to occur at exponentially small mass. (orig.).

15640 (NIIYaF-MGU-88-50-71) **Non-Noether symmetries and conservation laws.** Lunev, F.A. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1988. 12p. (In Russian). Order Number DE91623518. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that local conserved current can be brought to conformity with each pair of non-Noether symmetries in Lagrangian field theory. Generalization of this result for a non-Lagrangian case is given. 7 refs.

15641 (NIIYaF-MGU-89-32-109) **Symmetrically-recursion operator in bi-Lagrangian theories.** Lunev, F.A. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1989. 10p. (In Russian). Order Number DE91623519. Source: OSTI; NTIS (US Sales Only); INIS.

Theorem about the existence of symmetrically-recursion operator in bi-Lagrangian theories has been proposed. The theorem is valid for a wide range of equations with local and nonlocal Lagrangians, with commutating and anticommutating variables. Symmetrically-recursion operator and corresponding higher symmetries and higher conservation laws in classical electrodynamics have been constructed as an example. 7 refs.

15642 (NIKHEF-H-89-8) **Generalized killing equations and symmetries of spinning space.** Rietdijk, R.H. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H); Holten, J.W. van. Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Apr 1989. 13p. Order Number DE91623520. Source: OSTI; NTIS (US Sales Only); INIS.

The authors derive a set of general conditions for the isometrics of d-dimensional spinning space. These equations constitute a Grassmann-valued extension of the Killing equations for ordinary space. They are realized as invariances of spinning-particle actions. Some general solutions for the extended Killing equations in arbitrary curved space are presented. Thus the spinning particle in d-dimensions can be shown to possess new types of (super-)symmetries, which transform the commuting and anti-commuting co-ordinates (X^μ, ψ^μ) not only linearly, but also non-linearly. The authors present the algebra of these non-linear transformations. They give a complete solution of the generalized Killing-equations for flat spinning space and construct an infinite set of conserved charges. (author). 11 refs.

15643 (NIKHEF-H-90-14) **Simple WZW currents.** Fuchs, J. (Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Aug 1990. 12p. Order Number DE91623521. Source: OSTI; NTIS (US Sales Only); INIS.

A complete classification of simple currents of WZW theory is obtained. The proof is based on an analysis of the quantum dimensions of the primary fields. Simple currents are precisely the primaries with unit quantum dimension; for WZW theories explicit formulae for the quantum dimensions can be derived so that an identification of the fields with unit quantum dimension is possible. (author). 19 refs.; 2 tabs.

15644 (OUP-90-29) **Magnetic fields around permanent magnets.** Yang, Z.J. Oslo Univ. (Norway). Fysisk Inst. Nov 1990. 11p. Order Number DE91623522. Source: OSTI; NTIS (US Sales Only); INIS.

The field distribution around permanent magnets with spherical and bar-like shapes homogenously polarized have been calculated. Based on these results several field profiles have been obtained by taking the limits. 2 refs., 2 figs.

15645 (OUP-90-31) **Recursive integral equations with positive kernel for lattice calculations.** Illuminati, F. (Oslo Univ. (Norway). Fysisk Inst.); Isopi, M. Oslo Univ. (Norway). Fysisk Inst. Nov 1990. 19p. Order Number DE91623523. Source: OSTI; NTIS (US Sales Only); INIS.

A Kirkwood-Salzburg integral equation, with positive defined kernel, for the states of lattice models of statistical mechanics and quantum field theory is derived. The equation is defined in the thermodynamic limit, and its iterative solution is convergent. Moreover, positivity leads to an exact a priori bound on the iteration. The equation's relevance as a reliable algorithm for lattice calculations is therefore suggested, and it is illustrated with a simple application. It should provide a viable alternative to Monte Carlo methods for models of statistical mechanics and lattice gauge theories. 10 refs.

15646 (OUP-90-34) **Vacuum currents around a magnetic fluxstring.** Flekkoey, E.G.; Leinaas, J.M. Oslo Univ. (Norway). Fysisk Inst. Dec 1990. 28p. Order Number DE91623524. Source: OSTI; NTIS (US Sales Only); INIS.

Vacuum polarization effects around a singular magnetic flux string in 2+1 and 3+1 dimensions have been examined. In particular charge and current densities and the flux induced by the vacuum current have been determined. The analysis is performed entirely on the basis of exact solutions to the pertinent Dirac equation. The 3+1 dimensional effects can be described in a simple way as a superposition of the 2+1 dimensional effects. 15 refs., 5 figs.

15647 (RAL-90-086) **New expressions for string loop amplitudes leading to an ultra-simple conception of string dynamics.** Chan Hongmo (Rutherford Appleton Lab., Chilton (UK)); Tsou Sheungtsun; Bordes, J.; Nelien, L. Rutherford Appleton Lab., Chilton (UK). Nov 1990. 39p. Order Number DE91623525. Source: OSTI; NTIS (US Sales Only); INIS.

New expressions are derived for string loop amplitudes as overlap integrals of string wave functionals. They are shown to take the form of exchange terms coming from the Bose-Einstein symmetrisation between string segments. One is thus led to the ultra-simple conception that string theory is basically free, and that 'string interactions' are due merely to the fact that strings are composite objects with Bose-Einstein segments as constituents. (author).

15648 (YITP/U-90-24) **The S-Matrix coupling dependence for a, d and e affine Toda field theory.** Braden, H.W. (Edinburgh Univ. (UK). Dept of Mathematics); Sasaki, R. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Sep 1990. 14p. Order Number DE91768090. Source: OSTI; NTIS (US Sales Only); INIS.

Affine Toda field theories are solvable 1+1 dimensional quantum field theories closely related to integrable deformations of conformal field theory. The S-Matrix elements for an affine Toda field theory are known to depend on the coupling constant β through one universal function $B(\beta)$ which cannot be determined by unitarity, crossing and the bootstrap. From the requirement of nonexistence of extra poles in the physical region its form is conjectured to be $B(\beta) = (2\pi)^{-1}$center dot$\beta^2/((1+\beta^2)/4\pi)$. We show that the above conjecture is correct up to one loop order (i.e., β^4) of perturbation for simply laced, i.e., a, d and e affine Toda field theories using a general argument which exhibits much of the richness of these theories. (author).

15649 (YITP/U-90-25) **Multiple poles and other features of affine Toda field theory.** Braden, H.W. (Edinburgh Univ. (UK). Dept. of Mathematics); Corrigan, E.; Dorey, P.E.; Sasaki, R. Kyoto Univ., Uji (Japan). Yukawa Inst. for Theoretical Physics. Oct 1990.

33p. Order Number DE91768089. Source: OSTI; NTIS (US Sales Only); INIS.

Some perturbative features of affine Toda field theory are explored, in particular the mechanisms responsible for the first, second and third order poles in the conjectured exact factorisable S-matrices in the ADE series of models. It is found that generic collections of Feynman diagrams are responsible for the leading order poles in any of the theories. However, the complexity is such that it has not yet proved possible to analyse all the singularities that occur up to order twelve. Some comments are made on an associated tiling problem and on an interesting connection between the affine Toda couplings and the Clebsch-Gordan decomposition of tensor products. (author).

Dept. de Physique Nucleaire. 1990. 187p. (In French). Order Number DE91767799. Source: OSTI; NTIS (US Sales Only).

The work performed at the Nuclear Physics Department, from the 1st October 1988 to the 30th September 1990, are summarized. The investigations are carried out in the fields of heavy ion physics, intermediate energy physics and accelerators using superconducting cavities. Theoretical and experimental studies accomplished in the following fields are included: hot nuclei, exotic nuclei, giant resonances, fission, inelastic scattering, electroproduction of pions, polarization of deuterons, central collisions.

15651 (DOE/ER/40162-T5) **Light particle emissions in heavy ion reactions: Progress report, June 1, 1990-May 31, 1991.** Petitt, G.A.; Liu, Xin-Tao; Smathers, J.; Zhang, Ziang. Georgia State Univ., Atlanta, GA (USA). Dept. of Physics and Astronomy. Mar 1991. 16p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-84ER40162. Order Number DE91010746. Source: OSTI; NTIS; INIS; GPO Dep.

We are completing another successful year of experimental work at the Holifield Heavy Ion Research Facility (HHIRF), the Los Alamos white neutron source facility, Brookhaven National Laboratory (BNL) and Georgia State University (GSU). A paper on energy division between the two heavy fragments in deep inelastic reactions between ^{58}Ni + ^{165}Ho was published in Physical Review C during the year. We have partially completed analysis of the data on the ^{32}S + ^{93}Nb system taken with the HILI detector system at the HHIRF. This paper discusses work on these topics and discusses the setup of a neutron detector for a neutron reaction experiment.

15652 (DOE/ER/40376-4) **Microscopic heavy-ion theory: Progress report, February 1990-January 1991.** Oberacker, V.E.; Umar, A.S. Vanderbilt Univ., Nashville, TN (USA). Dept. of Physics and Astronomy. [1991]. 9p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-87ER40376. Order Number DE91010739. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses the following topics: EM lepton pair production in relativistic HI collisions; string-parton model for RHI collisions; study of fission dynamics via muon-induced fission; mean-field studies with B-splines; the Basis-Spline collocation method; and relativistic generalization of the collective model.

15653 (GSI-91-03) **The discovery of nuclear compression phenomena in relativistic heavy-ion collisions.** Schmidt, H.R. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 50p. Order Number DE91764932. Source: OSTI; NTIS (US Sales Only); INIS.

This article has attempted to review more than 15 years of research on shock compression phenomena, which is closely related to the goal of determining the nuclear EOS. Exciting progress has been made in this field over the last years and the fundamental physics of relativistic heavy ion-collisions has been well established. Overwhelming experimental evidence for the existence of shock compression has been extracted from the data. While early, inclusive measurements had been rather inconclusive, the advent of 4π-detectors like the GSI-LBL Plastic Ball had enabled the outstanding discovery of collective flow effects, as they were predicted by fluid-dynamical calculations. The particular case of conical Mach shock waves, anticipated for asymmetric collisions, has not been observed. What are the reasons? Surprisingly, the maximum energy of 2.1 GeV/nucleon for heavy ions at the BEVALAC had been found to be too low for Mach shock waves to occur. The small ^{20}Ne-nucleus is stopped in the heavy Au target. A Mach cone, however, if it had developed in the early stage of the collision will be wiped out by thermal motion in the process of slowing the projectile down to rest. A comparison of the data with models hints towards a rather hard EOS, although a soft one cannot be excluded definitively. A quantitative extraction is aggravated by a number in-medium and final-state effects which influence the calculated observables in a similar fashion as different choices of an EOS. Thus, as of now, the precise knowledge of the EOS of hot and dense matter is still an open question and needs further investigation. (orig.).

15654 (GSI-91-03(prepr.)) **Directions of heavy ion physics.** Kienle, P. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 40p. (CONF-901277-: Yoshio Nishina centennial symposium on evolutional trends of physical sciences, Tokyo (Japan), 5-7 Dec 1990). Order Number DE91764670. Source: OSTI; NTIS (US Sales Only); INIS.

Recent progress and directions of heavy ion physics in various fields of nuclear atomic physics are presented. The progress in the acceleration technique in producing high energy high phase space density heavy ion beams in cooler storage rings is discussed. Studies of nuclei under extreme conditions address topics like the structure of nuclei at the border of nuclear stability including high spin states. Nuclear dynamics studies from the Coulomb-barrier to relativistic energies will be presented with a focus on the production of dense, heated and excited nuclear matter including the study of the properties of hadrons in such a medium particularly with respect to chiral symmetry restoration. Some atomic physics experiments with heavy ions will be addressed with emphasis on quasiatom and e^+e^- pair production. (orig.).

15655 (IAEA-NDS-10(Rev.2)) **ENDF/B format.** Khalil, M.A.; Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1986. 25p. Order Number DE91624088. Source: OSTI; NTIS (US Sales Only); INIS.

This document is a brief user's description of the format of ENDF/B. This format, originally designed for the US Evaluated Nuclear Data File, is recommended for international use. This summary is an aid to customers of the IAEA Nuclear Data Section when receiving data retrievals in ENDF/B format. For more detailed information the report BNL-NCS-50496 (ENDF 102) should be consulted. An Appendix to the present document gives a summary of the format differences between ENDF/B-4 and ENDF/B-5. (author).

15656 (IAEA-NDS-11(Rev.5)) **ENDL-84. The Evaluated Nuclear Data Library of the Lawrence Livermore National Laboratory in the ENDF-5 format: Contents and documentation.** Cullen, D.E.; McLaughlin, P.K.; Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 47p. Order Number DE91624089. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of the evaluated nuclear data library (ENDL) by the Lawrence Livermore National Laboratory, USA, converted to ENDF-5 format. The library contains evaluated data for all significant neutron reactions in the energy range from 10^{-4} eV to 20 MeV for 94 elements or isotopes. The

entire library or selective retrievals from it can be obtained on magnetic tape, free of charge, from the IAEA Nuclear Data Section. (author).

15657 (IAEA-NDS–18(Rev.4)) **JENDL-2 (Rev. 1). Japanese Evaluated Nuclear Data Library. Version 2 Rev. 1: Contents and documentation.** Pronyaev, V.G.; Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Nov 1986. 8p. Order Number DE91624095. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of JENDL-2, the Japanese Evaluated Nuclear Data Library in ENDF/B-4 format. Copies of the data library or selective retrievals from it are available upon request costfree from the IAEA Nuclear Data Section. (author). 1 tab.

15658 (IAEA-NDS–21(Rev.4)) **KEDAK-4. Karlsruhe Evaluated Neutron Data Library: Brief summary of contents and format.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1986. 19p. Order Number DE91624096. Source: OSTI; NTIS (US Sales Only); INIS.

This summary is an aid to customers of the IAEA Nuclear Data Section when receiving data retrievals in KEDAK format. The KEDAK-4 Library or a selective retrieval from it is available costfree upon request. (author).

15659 (IAEA-NDS–64(Rev.0)) **GRINTACS. Thermal Neutron Activation Cross-Sections and Resonance-Integrals.** Gryntakis, E. (comp.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jan 1986. 66p. Order Number DE91624097. Source: OSTI; NTIS (US Sales Only); INIS.

This data compilation was included in the IAEA Handbook on Nuclear Activation Data (1986). The data file is also available on magnetic tape from the IAEA Nuclear Data Section. The tape is expected to be updated when new data become available. (author).

15660 (IAEA-NDS–68(Rev.0)) **RCN-2.CP. Evaluated neutron cross-section library for 13 corrosion products, cover-gas nuclides and other nuclides in the primary cooling circuit of a fast power reactor.** Gruppelaar, H. (Netherlands Energy Research Foundation, Petten (Netherlands)); Lemmel, H.D. (ed.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1986. 15p. Order Number DE91624098. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of the evaluated neutron cross-section library "RCN-2.CP" released in 1982 by the Netherlands Energy Research Foundation, ECN. - Upon request, this library is available on magnetic tape, in KEDAK format, from the IAEA Nuclear Data Section, costfree. (author).

15661 (IAEA-NDS–90(Rev.3)) **BROND. USSR Evaluated Neutron Data Library.** Manokhin, V.N. (and others). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 20p. Order Number DE91624099. Source: OSTI; NTIS (US Sales Only); INIS.

Revised by Lemmel, H.D. and McLaughlin, P.K.

BROND, the USSR computerized data library for evaluated neutron reaction data was released in 1987/1990. Upon request it is available on magnetic tape, costfree, from the IAEA Nuclear Data Section. This document describes the contents of this library in the versions BROND-NDS1 and BROND-NDS2, BROND-NDS3, BROND-NDS4. (author). 16 refs.

15662 (IAEA-NDS–92(Rev.0)) **WIMKAL-88. The 1988 version of WIMS-KAERI Library: Summary Report.** Jung Do Kim (Korea Advanced Energy Research Inst., Daeduk (Republic of Korea)). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1990. 34p. Order Number DE91624100. Source: OSTI; NTIS (US Sales Only); INIS.

The WIMS-KAERI Library is a nuclear data library for thermal reactor neutronics calculations. It contains neutron reaction data in 69 groups of neutron energies for more than 130 materials. A magnetic tape copy of the library is available, free of charge. (author). 1 fig., 8 tabs.

15663 (IAEA-NDS–117(Rev.0)) **GAMCAT. Gamma and alpha rays from radioactive decay.** International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section; Fachinformationszentrum Karlsruhe, Gesellschaft fuer Wissenschaftlich-Technische Information mbH, Eggenstein-Leopoldshafen (Germany, F.R.). May 1990. 4p. Order Number DE91624090. Source: OSTI; NTIS (US Sales Only); INIS.

GAMCAT is a personal computer database on gamma and alpha rays from radioactive nuclei. The database is available from the Fachinformationszentrum Karlsruhe for a nominal sales price; it is not available from the IAEA. (author).

15664 (IAEA-NDS–118(Rev.0)) **The ENSDF radioactivity data base for IBM-PC and computer network access.** Ekstroem, P. (Lund Univ. (Sweden). Dept. of Nuclear Physics); Spanier, L. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1989. 11p. Order Number DE91624091. Source: OSTI; NTIS (US Sales Only); INIS.

A database for about 15000 gamma rays from 2777 radioactive nuclides derived from the international Evaluated Nuclear Structure Data File (ENSDF) is described together with supporting computer codes. The database is available on a PC diskette, costfree, from the IAEA Nuclear Data Section. (author).

15665 (IAEA-NDS–120(Rev.0)) **JEF-1. The evaluated nuclear data library of the NEA Data Bank: Summary of contents.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 21p. Order Number DE91624092. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of JEF-1, the Joint Evaluated File of nuclear data compiled by the OECD Nuclear Energy Agency Data Bank, finalized in 1986 and released in 1990. The entire library or retrievals of selected materials are available on magnetic tape from the IAEA Nuclear Data Section free of charge. (author).

15666 (IAEA-NDS–125(Rev.0)) **UENDL/NAA. USSR Evaluated Nuclear Data Library for Neutron Activation Analysis.** Pashchenko, A.B. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Nov 1990. 76p. Order Number DE91624093. Source: OSTI; NTIS (US Sales Only); INIS.

This document describes contents and format of the USSR Evaluated Nuclear Data library for Neutron Activation Analysis. It contains recommended values for activation cross-sections of 14.5 MeV energy neutrons and neutrons form U-235 and Cf-252 fission; for resonance integrals of capture, absorption and fission reactions; for thermal neutron capture and absorption reaction cross-sections; for effective resonance energy values; for the main gamma-ray energies of neutron capture and for their absolute intensities; for half-lives and abundance for all known nuclides. Upon request UENDL/NAA library package is available on a set of two low density PC diskettes from the IAEA Nuclear Data Section on a cost-free basis. (author). 4 refs, 2 tabs.

15667 (IAEA-NDS–141(Rev.0)) **The International Reactor Dosimetry File (IRDF-90).** Kocherov, N.P.; McLaughlin, P.K. (comps.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1989. 55p. Order Number DE91624094. Source: OSTI; NTIS (US Sales Only); INIS.

This document describes the contents of the new version of the International Reactor Dosimetry File (IRDF-90) which contains recommended neutron cross-section data to be used for reactor neutron dosimetry by foil activation. It also contains selected recommended values for radiation damage cross-sections and benchmark neutron spectra. This library supersedes all earlier versions of IRDF. It is available on magnetic tape or on a set of PC diskettes from the IAEA Nuclear Data Section, costfree, upon request. (author). 3 refs, 1 tab.

15668 (INDC(CCP)–323/L) **Reaction cross-sections induced by 14.5 MeV and by Cf-252 and U-235 fission spectrum neutrons: An analytical review.** Pashchenko, A.B. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee; Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). Jan 1991. 59p. Translation of report FEI-0236 by A. Lorenz. (FEI–0236.). Order Number DE91624101. Source: OSTI; NTIS (US Sales Only); INIS.

Translation of report FEI-0236 by A. Lorenz.

The analytical review "Reaction Cross-Sections induced by 14.5 MeV Neutrons and by Cf-252 and U-235 Fission Spectrum Neutrons" presents evaluated values of threshold activation reaction cross-sections for stable nuclides induced by 14.5 MeV neutrons and by Cf-252 and U-235 fission spectrum neutrons. (author). 41 refs, tabs.

15669 (INDC(NDS)–238/L, pp. 9-19) **Gamma-ray production cross section measurements using a white neutron source from 1 to 400 MeV.** Wender, S.A. (Los Alamos National Lab., NM (USA)); Nelson, R.O.; Laymon, C.M. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee; Ceskoslovenska Komise pro Atomovou Energii, Prague (Czechoslovakia). Nov 1990. (CONF-9002109–: Specialists' meeting on measurement, calculation and evaluation of photon production cross sections, Smolenice (Czechoslovakia), 5-7 Feb 1990). In *Measurement, calculation and evaluation of photon production cross-sections: Proceedings of the specialists' meeting held in Smolenice, the Czech and Slovak Federal Republic, 5-7 February 1990.* 194p. Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

The continuous energy (white) neutron source at the Los Alamos Meson Physics Facility (LAMPF) is used to measure photon-production cross sections over a wide range of neutron energies. Detector systems have been or are being developed to measure gamma rays in the energy range from hundreds of keV up to several hundreds of MeV. In particular a high resolution Ge detector system is used to detect gamma rays from several hundred keV to over 6 MeV. A 5 crystal BGO detector system is used for measuring gamma-rays from 1 MeV to approximately 20 MeV. A large volume BGO detector with an active shield is used to measure gamma rays in the range from 5 to 40 MeV. We are presently developing a multi-element gamma-ray telescope to measure gamma rays with energies from 50 MeV up to several hundred MeV. (author). 8 refs, 7 figs.

15670 (INIS-SU–236/A, pp. 63-75) **Isotopic dependence of radiative capture cross sections of intermediate and heavy mass nuclei at neutron energy of 0.5-2.0 MeV.** Trofimov, Yu.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Dependence of neutron radiation capture cross sections on the parameter of neutron excess of mean and heavy mass nuclei at 0.5-2 MeV neutron energy is ascertained on the base of the cross section exponential dependence on the reaction energy. An adequate description of experimental data on the nucleus neutron radiation capture cross sections by an isotopic dependence allows one to evaluate cross sections of ^{95,97}Nb, ^{105}Rh, ^{106}Ru, ^{111}Ag, ^{129,131}I, ^{132}Te, ^{135}Cs and ^{144}Ce nuclei-fission products difficult to be measured. Comparison to the data available is made. 16 refs.; 4 figs.; 1 tab.

15671 (ITEF–167-89) **Experimental testing of stationary cold nuclear fusion.** Danilov, M.M.; Zarubin, A.B.; Katarzhnov, Yu.D.; Kushin, V.V.; Nedopekin, V.G.; Nesterov, N.A.; Plotnikov, S.V.; Radkevich, I.A.; Rogov, V.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. (In Russian). Order Number DE91624104. Source: OSTI; NTIS (US Sales Only); INIS.

Measurement results of the yield of neutrons which may result from fusion of deuterium nuclei during palladium sample saturation with deuterium under electrolysis conditions are given in the paper. The obtained results indicate absence of stationary cold nuclear fusion at $< 1.1 \times 10^{-24}$ neutron/s per one deuterium atom in sample and it essentially differs from data presented by other authors which managed to reach positive effect. Some sources of systematic error occurrence are indicated as well. 4 refs.; 2 figs.

15672 (LA-UR–91-3) **The file of evaluated decay data in ENDF/B.** Reich, C.W. (Idaho National Engineering Lab., Idaho Falls, ID (USA)); England, T.R. Los Alamos National Lab., NM (USA). [1991]. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910603–3: Annual meeting of the American Nuclear Society (ANS), Orlando, FL (USA), 2-6 Jun 1991). Order Number DE91007348. Source: OSTI; NTIS; INIS; GPO Dep.

One important application of nuclear decay data is the Evaluated Nuclear Data File/B, the base of evaluated nuclear data used in reactor research and technology activities within the US. This report discusses the decay data file.

15673 (NIFS-DATA–9) **Partial and total electronic stopping cross sections of atoms and solids for protons.** Kaneko, Toshiaki. National Inst. for Fusion Science, Nagoya (Japan). Dec 1990. 111p. Order Number DE91767977. Source: OSTI; NTIS (US Sales Only); INIS.

Based on a wave packet theory (Phys. Rev. A40, 2188(1989); Phys. Stat. Sol. (B)156,49(1989)), partial and total electronic cross sections of target elements in atomic and solid phases with atomic number Z ranging from 2 (He) to 92 (U) are tabulated shell by shell for protons with velocity v from $0.2V_0$ to $2OV_0$ (V_0=2.18 x 10^8cm/s). (author).

15675 (BONN-IR–90-57) **Deuteron electrofission in forward direction at a four-momentum transfer of Q^2=0.12 (GeV/c)^2.** Boden, B. Bonn Univ. (Germany, F.R.). Physikalisches Inst.; Bonn Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet. Dec 1990. 90p. (In German). Order Number DE91764652. Source: OSTI; NTIS (US Sales Only); INIS.

The deuteron electrodisintegration has been performed as the first experiment at the new Bonn 3.5 GeV high duty-cycle electron accelerator ELSA (Electron Stretcher and Accelerator). The cross section was measured in the region of the $\Delta(1232)$ resonance excitation at four-momentum-transfer of Q^2 = 0.12 (GeV/c)^2. An enhancement of the cross section has been observed at the mass of the NΔ system(W = 2.19 GeV) at each of the three hadron spectrometer angles Θ_p^{LAB} = 44^0, 56^0, 68^0 which were set. The results are compared with theoretical calculations. (orig.).

15676 (FRCEA-TH–326) **Experimental study of pions photoproduction and photodesintegration mechanisms on helium 3 in the Δ (1232) resonance region.** D'Hose, N. CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Dept. de Physique Nucleaire; Paris-11 Univ., 91 - Orsay (France). Jul 1988. 187p. (In French). Order Number DE91762837. Source: OSTI; NTIS (US Sales Only).

The goal of this work is the study in ^{3}He of the mechanisms involved in the absorption of photons in the $\Delta(1232)$ resonance region. One, two, or three nucleons participate in this absorption depending upon the specific reaction induced: pion photoproduction proceeds preferentially through absorption on a simple nucleon, whereas in photodesintegration without pion emission the photon is absorbed by few-nucleon subsystems. The experiments

were performed at the Saclay Linear Accelerator with the quasi-monochromatic in flight positron annihilation photon beam. Pion and proton spectra were measured using magnetic spectrometers for several angles from 20^0 to 72^0. Photon energies were in the 210-450 MeV range. For each kinematical setting a corresponding measurement of the reactions H($\gamma\pi^+$)n and D(γp)n allowed the comparison of the helium-3 cross sections to these more elementary ones. Our experimental results are compared to theoretical calculations utilizing realistic ^{3}He wave functions. Impulse approximation models which incorporate the nucleon Fermi motion cannot reproduce the pion coherent photoproduction ^{3}He($\gamma\pi^+$). The theoretical predictions of a charged pion quasi free photoproduction overestimate the experimental cross sections. For ^{3}He photodesintegration, without π production the calculations include short range correlations, mesonic exchange currents, and final state interactions. They agree reasonably well with the measured spectra in the region where absorption by a nucleon pair dominates, but they underestimate the cross section in the high momentum tip region.

This data file contains evaluated Legendre coefficients for the neutron source reactions H-1(t,n)He-3, H-1(Li-7,n)Be-7, H-1(B-11,n)C-11, H-1(C-13,n)N-13, H-1(N-15,n)O-15, H-2(d,n)He-3, H-2(t,n)He-4, H-3(p,n)He-3, H-3(d,n)He-4, Li-7(p,n)Be-7, B-11(p,n)C-11, C-13(p,n)N-13 and N-15(p,n)O-15. The diskette also contains a FORTRAN program calculating neutron energies and differential cross sections from the coefficients as well as neutron yields using energy-loss tables which are also provided. The data are available costfree from the IAEA Nuclear Data Section on 5.25 inch or 3.5 inch DOS formatted (IBM standard) diskette. (author).

15679 (INS–855) **Pion-transfer (n,d) and (d, ^{3}He) reactions leading to deeply bound pionic atoms.** Toki, H. (Tokyo Metropolitan Univ. (Japan). Dept. of Physics); Hirenzaki, S.; Yamazaki, T. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Nov 1990. 34p. Order Number DE91767893. Source: OSTI; NTIS (US Sales Only); INIS.

Theoretical studies are given on the (n,d) and (d, ^{3}He) reactions leading to deeply bound pionic atoms in heavy nuclei of configuration [(nl)$_\pi$center dotj_n^{-1}]J. The cross sections for various pionic and neutron-hole configurations in the case of a ^{208}Pb target are calculated at incident energies 300-1000 MeV/u by using the effective number approach and the eikonal approximation for distortion. The effective number with a pion in the 1s or 2p state and a neutron hole in the $i_{13/2}$ orbit peaks around the same incident energy (T_n=600 MeV) as the elementary cross section n+n->d+π^-, where the momentum transfer matches the angular-momentum transfer of L=5~7. The DWIA cross section for (n,d) producing a pion in the 1s or 2p orbit at T_n=600 MeV is found to be around 42 or 75 μb/sr, respectively. At T_n=350 MeV, where the momentum transfer is small, quasi-substitutional states of configurations [$(2p)_\pi(3p_{1/2})_n^{-1}$]L=0 and [$(2p)_\pi(3p_{3/2})_n^{-1}$]L=0 are preferentially populated with cross sections of 190 and 380 μb/sr, respectively. The (d, ^{3}He) cross sections are estimated to be an order of magnitude smaller than the (n,d) cross sections. Thus, the (n,d) and (d, ^{3}He) reactions are found to be suited for the production of deeply bound pionic atoms. (author).

15680 (ITEF–117-89) **Search for double-charged anomalons in ^{3}Hep interactions at ^{3}He nucleus momentum of 5 GeV/c.** Abdullin, S.K. (and others); Blinov, A.V.; Vanyushin, I.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. (In Russian). Order Number DE91624108. Source: OSTI; NTIS (US Sales Only); INIS.

Experimental data are obtained using 80 cm liquid helium bubble chamber exposed in ^{3}He nuclei separated beam with momentum of 5 GeV/c. The present statistics presents no indications to existence of double-charged anomalons in p^{3}He interactions, the proton kinetic energy being $T_{p_{in}} \simeq 1$ GeV. It is shown that one of most probable methodical errors may cause imitation of anomalously small mean free paths. 8 refs.; 2 figs.

15681 (ITEF–159-89) **Study on the ^{3}Hp→dppπ^- at 5 GeV/c momentum in total phase space.** Abdullin, S.K. (and others); Blinov, A.V.; Vanyushin, I.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 12p. (In Russian). Order Number DE91624109. Source: OSTI; NTIS (US Sales Only); INIS.

ITEP liquid-hydrogen chamber 80cm in diameter, exposed to separated ^{3}H nucleus beams with 5 GeV/c momentum, was used to study for the first time the ^{3}Hp→dppπ^- reaction. 1060 events of such reaction were selected; this corresponds to 2.12±0.06 mbn cross section. Study of angular, mass and momentum spectra was conducted on the basis of the pole model in total phase space. Production of two- and three-baryon resonances were not suggested in studied reaction. 17 refs.; 4 figs.

The ENDF/B-6 Standards Library includes evaluated data for seven neutron reactions that are internationally recommended as reference standards for nuclear measurements. The reactions are H-1,(n,n), He-3(n,p), Li-6(n,t), B-10(n,α), C(n,n), Au(n,γ), U-235(n,f). The data are available on magnetic tape from the IAEA Nuclear Data Section, free of charge. (author).

15684 (IPNO-DRE–9009) **Observation of the forward neutrons from the break-up of the ^{11}Li neutron halo.** Anne, R. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (FR)); Lewitowicz, M.; Saint-Laurent, M.G.; Arnell, S.E.; Jonson, B.; Mattsson, S.; Nyman, G.; Wilhelmsen, K.; Emling, H.; Hansen, P.G.; Johannsen, L.; Riisager, K.; Neugart, R.; RichteParis-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. 16p. Contract 06DA 184 I. Order Number DE91767803. Source: OSTI; NTIS (US Sales Only).

The cross-sections and forward angular distributions of fast neutrons have been studied for the reaction (^{11}Li, ^{9}Li) at 29 MeV/u on

targets of Be, Ni and Au. The cross-sections are large and arise essentially from peripheral reactions: Coulomb dissociation for the gold target, absorption and diffraction dissociation for the beryllium target. The angular distributions of the neutrons are almost identical for the three targets and very narrow; the half angle is $(2.9 +- 0.4)^0$. All evidence is consistent with the existence of a neutron halo with radius of about 12 fm.

15685 (LUNFD6-NFFK–1002-SE) **Inclusive and coincidence measurements of light particles and fragments from intermediate energy heavy ion collisions.** Westenius, M. Lund Univ. (Sweden). Dept. of Cosmic and Subatomic Physics. Oct 1990. 55p. Order Number DE91625471. Source: OSTI; NTIS (US Sales Only); INIS.

Intermediate energy heavy ion collisions have been studied. Presented data on light particles (ZETA=1,2) emitted in ^{12}C +C, Al, Cu, Au reactions at 35A and 85A MeV incident projectile energy are generally well described within the participant-spectator picture. When coincident light particles are measured, an excess of particles detected with (Δphi = 180 degrees) is found. The strength of this excess increases with the mass of the coincident particles and decreases with the mass of the target. These observation seem to be consistent with particle emission from a participant region where momentum conservation within this region causes the observed behaviour. Azimuthal angular distributions of projectile-like fragments detected in coincidence with light particles are consistent with a transverse momentum balance between the fragment and a participant source. Low-energy (1A-6A MeV) medium-heavy (ZETA=3-12) fragment emitted in 94A MeV ^{16}O+ Al collisions have been measured using ΔE-E telescopes consisting of silicon detectors implanted with boron. The momentum distributions of these fragments indicate the existence of two emission components. In addition to a component, which is isotropic in a system shifted by parallel- and transverse momenta ~ 15A MeV/c, another component with larger momentum shifts is needed to describe the results. (author).

15686 (INDC(NDS)–238/L, pp. 149-186) **Evaluation of discrete γ ray production cross sections in (n,xγ) reactions on Al for nuclear geophysics.** Oblozinsky, P.; Hlavac, S. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee; Ceskoslovenska Komise pro Atomovou Energii, Prague (Czechoslovakia). Nov 1990. (CONF-9002109–: Specialists' meeting on measurement, calculation and evaluation of photon production cross sections, Smolenice (Czechoslovakia), 5-7 Feb 1990). In *Measurement, calculation and evaluation of photon production cross-sections: Proceedings of the specialists' meeting held in Smolenice, the Czech and Slovak Federal Republic, 5-7 February 1990.* 194p. Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

We develop a set of recommended γ production cross sections in neutron reactions on aluminium for use in applied nuclear geophysics. This is achieved by analysis of existing experimental, theoretical, and evaluated production cross sections of discrete γ rays in (n,xγ) reactions on Al, in the incident neutron energy range from threshold up to 20 MeV. 36 refs, 13 figs, 9 tabs.

15687 (INIS-SU–236/A, pp. 101-105) **Experimental determination of the $^{27}Al(n,\alpha)^{24}Na$ reaction cross section at neutron energy of 14.8 MeV.** Moiseev, N.N.; Ramendik, Z.A.; Shchebolev, V.T. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Reported at the 1.International conference on neutron physics, Kiev(UA), 21-25 Sep 1987.

Cross section of $^{27}Al(n,\alpha)^{24}Na$ reaction was measured by activation method at neutron energy of 14.8 MeV. Its value was obtained being equal to (110±2) mb. Neutron fluence rate was measured with an uncertainty of less than 1%. Measurement of induced activity was carried out by beta-gamma-coincidence method and by scintillation gamma-spectrometer. 8 refs.; 1 tab.

15688 (IPNO-DRE–9005) **Production of and experiments with secondary radioactive beams.** Mueller, A.C. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. 12p. (CONF-9004248–: 2. IN2-P3-RIKEN symposium on heavy-ion collisions, Obernai (France), 9-13 Apr 1990). Order Number DE91767791. Source: OSTI; NTIS (US Sales Only).

Examples of recent experiments performed at the doubly achromatic spectrometer LISE are used to highlight the present-day interest in secondary radioactive beams and to point to some future experimental possibilities.

15689 (LIYaF–1557) **Search for correlated groups of particles produced in interactions of neon-22 relativistic nuclei with nuclei in photoemulsion at 4.1 A GeV/c momentum.** Lepekhin, F.G.; Simonov, B.B. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 14p. (In Russian). Order Number DE91624117. Source: OSTI; NTIS (US Sales Only); INIS.

An analysis of collisions of relativistic neon-22 nucleus in nuclear emulsion at 4.1 A GeV/c is carried out to observe jets of produced particles genetically bound, correlated groups of single-charged relativistic particles of the event. Search for these groups was done by means of the algorithm in which the probability of the appearance of a group of particles in the separate event is estimated on measured values of polar and azimuthal angles of particles. The individual events containing groups of 2,3 and 4 particles with probability of random production less than 10^{-8} are identified. These events comprise about 5% from all inelastic interactions of relativistic neon 22 nucleus in nuclear emulsion. 22 refs.; 2 tabs.

15690 (OUP–90-28) **Anomalous emission of glueball candidates in the reaction anti p + Neon at 607 MeV/c incident momentum: CERN project PS-179.** Breivik, F.O. (Oslo Univ. (Norway). Fysisk Inst.); Haatuft, A.; Halsteinslid, A. LEAR Collaboration. Oslo Univ. (Norway). Fysisk Inst. Nov 1990. 15p. Order Number DE91625472. Source: OSTI; NTIS (US Sales Only); INIS.

Two narrow peaks at about 1450 and 1800 MeV/c^2 are seen in the distribution of invariant mass of the assumed six-pion systems in the final states of anti pNe-reactions at 607 MeV/c incident momentum. These systems are emitted also in the backward direction in the laboratory system with momenta near the momentum of the incident antiproton. This observation and the small widths suggest that the peaks are not due to well known baryons or mesons belonging to any Regge-trajectory. The peaks could possibly be due to glueball production. 12 refs., 4 figs.

15693 (CRN-PN-9012) **Superdeformation at and above the Yrast.** Vivien, J.P. Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires. 1990. 14p. (CONF-9004248-: 2. IN2-P3-RIKEN symposium on heavy-ion collisions, Obernai (France), 9-13 Apr 1990). Order Number DE91767814. Source: OSTI; NTIS (US Sales Only).

The decay of the lowest energy superdeformed band has now been established for a number of nuclei near A = 150, confirming predictions that these superdeformed nuclei exist. Multiple superdeformed bands found in a few of these nuclei in conjunction with studies of the superdeformed bands in the γ-ray continuum give some insight into the feeding and desexcitation process as a funtion of excitation energy above the yrast line. These are the first premises of a nuclear spectroscopy in the superdeformed minimum, one of the principle aims of the future 4π γ-ray detection equipments.

15694 (IAEA-NDS-67(Rev.0)) **RCN-3. Evaluated Fission-Product Cross-Section Library.** Gruppelaar, H. (Netherlands Energy Research Foundation, Petten (Netherlands)); Lemmel, H.D. (ed.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1986. 48p. Order Number DE91624127. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of the Evaluated Fission-Product Cross-Section Library RCN-3 released in 1983 by the Netherlands Energy Research Foundation, ECN, and those parts of the earlier version of RCN-2 that were not superseded by RCN-3. Upon request the Library is available on magnetic tape from the IAEA Nuclear Data Section, costfree. (author).

15695 (INIS-SU-236/A, pp. 51-62) **Joint evaluation of level excitation functions and γ-spectra in inelastic neutron scattering on ^{93}Nb.** Pronyaev, V.G.; Belanova, T.S.; Elokhin, A.I.; Ignatyuk, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Revision of ^{93}Nb evaluated neutron cross section file for the BROND library is performed. The new file option comprises revised functions of inelastic scattering excitation levels, energy-angular distributions of secondary neutrons, γ-quantum spectra and production cross sections. The evaluation is performed within the framework of optico-statistic approach (functions of level excitation under inelastic scattering, secondary neutron energy-angular distributions) or analysis of experimental data (γ-ray yield cross sections and γ-quantum spectra).The analysis results are used when forming a new option of ^{93}Nb file for the BROND evaluated neutron cross section library. 42 refs.; 6 figs.; 1 tab.

15696 (ITEF-125-89) **Search for 2β decay of ^{116}Cd to first excited state of ^{116}Sn.** Barabash, A.S.; Kopylov, A.V.; Cherekhovskij, V.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 11p. (In Russian). Order Number DE91624129. Source: OSTI; NTIS (US Sales Only); INIS.

Limits for 2β decay of ^{116}Cd to the first excited state of ^{116}Sn is obtained: $T_{1/2}(0\nu+2\nu;0^+\text{-}2^+) \geq 4\times10^{19}$ yr. by means of low-background semiconductor gamma spectrometer. The limits for 2β decay of ^{116}Cd into excited ^{116}Sn states at 2112.2 (2_1^+) and 2225.3 keV (2_2^+) are obtained too ($T_{1/2}(0\nu+2\nu)>1.7\times10^{20}$ yr. and $>1.0\times10^{20}$ yr. respectively. 17 refs.; 3 figs.

15697 (ITEP-151-89) **Concerning possibility of search for $k\beta^+$ decay of ^{124}Xe.** Obodovskij, I.; Shchepkin, M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. Order Number DE91624130. Source: OSTI; NTIS (US Sales Only); INIS.

The estimates of probabilities of $K\beta^+(0\nu)$ and $K\beta^+(2\nu)$ decays of ^{124}Xe are given. Possibility of experimental search for these decays are briefly discussed. 13 refs.

15698 (GSI-90-73(prepr.)) **Triaxiality and γ-softness in the A $\simeq$ 190 mass region.** Wollersheim, H.J. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Dec 1990. 15p. (CONF-9009135-: International conference on high spin physics and gamma-soft nuclei, Pittsburgh, PA (USA), 17-21 Sep 1990). Order Number DE91764565. Source: OSTI; NTIS (US Sales Only); INIS.

The nuclear level structure and electromagnetic properties of $^{182,184,186}W$, ^{196}Pt and $^{198,200,202,204}Hg$ were investigated with γ-spectroscopic techniques using multiple Coulomb excitation by ^{208}Pb projectiles. E2 transition moments and spectroscopic quadrupole moments have been determined by a comparison of experimental scattering-angle dependent γ yields with calculated yields in a largely model-independent procedure. The results are compared with the rigid and soft asymmetric rotor model. From such a comparison the collective properties can be determined which permit to differentiate between various quadrupole shape parameters. The experimental results are discussed in particular with respect to the rigidity or softness in the γ-degree of freedom. The results for the isotopes ^{184}W and ^{186}W are consistent with an axially symmetric deformation. In contrast, the ^{182}W isotope exhibits a non-axial deformation together with an unexpected shape change at spin I=10$^+\hbar$. In case of ^{196}Pt the experimental data show both the characteristics for triaxiality and γ softness. The energies and B(E2) values of the ground state band in the Hg isotopes are well reproduced by the soft triaxial-rotor model. The relative B(E2) values show that the rapid shrinking of the collective configuration space made up by proton and neutron holes with respect to the Z=82 and N=126 major shells is not observed in experiment. (orig.).

Laboratoire National Saturne - Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). 1991. 17p. (CONF-910111-: 14. international winter meeting on nuclear physics, Bormio (Italy),

21-25 Jan 1991). Order Number DE91767713. Source: OSTI; NTIS (US Sales Only).

We study the stability of excited ^{197} Au nuclei with respect to multifragmentation. For that we use a dynamical simulation based on molecular dynamics and restructured aggregation. A particular attention is paid to check the stability of the ground state nuclei generated by the simulation. Four kinds of excitations are considered: heat, compression, rotation and a geometrical instability created when a projectile drills a hole in a ^{197} Au nucleus.

15700 (GSI–91-08(prepr.)) **Intermediate mass fragments from ^{40}Ar+^{197}Au: Transition from the incomplete fusion to the participant spectator regime.** Milkau, U. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.)); Berdermann, E.; Hildenbrand, K.D.; Hubele, J.; Kunde, G.J.; Lynen, U.; Mueller, W.F.J.; Rabe, H.J.; Sann, H.; Stelzer, H.; Trautmann, W.; Trockel, R.; Berthier, B.; BouissoGesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 14p. Order Number DE91764946. Source: OSTI; NTIS (US Sales Only); INIS.

Inclusive cross sections of intermediate mass fragments from the reaction ^{40}Ar+^{197}Au at E/A=30 MeV and 220 MeV were measured with a low threshold and over a large range of angles. The integrated cross sections are about 2 b at both energies but the emission characteristics change considerably. The increased isotropy of the angular distributions and the strongly reduced Coulomb repulsion at the higher bombarding energy suggest that the emission process evolves towards fragmentation of excited spectator matter in central ion-ion collisions. (orig.).

15701 (INIS-SU–236/A, pp. 131-144) **Investigation of the ^{204}Pb γ-radiation in the (n,n'γ) reaction.** Demidov, A.M.; Mikhajlov, I.V.; Cherepantsev, Yu.K. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. In *Measurement, calculation and evaluation of photon production cross-sections: Proceedings of the specialists' meeting held in Smolenice, the Czech and Slovak Federal Republic, 5-7 February 1990.* 194p. Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

An analysis of spectra of prompt γ-rays emitted at the ^{232}Th, ^{235}U, and ^{238}U fission induced by 3 MeV and 15 MeV neutrons is presented. Energies and yields of about 30 γ-transitions have been determined in the time interval of 25 ns. An availability of the method used is discussed for investigation of the induced fission and for obtaining of the spectroscopic information on nuclei laying far from the beta-stability valley. (author). 11 refs, 3 figs, 1 tab.

15710 (INIS-SU–236/A, pp. 106-116) **Analysis of prompt neutron spectrum of plutonium-239 nucleus fission.** Sukhikh, S.Eh.; Lovchikova, G.N.; Vinogradov, V.A.; Zhuravlev, B.V.; Polyakov, A.V.; Sal'nikov, O.A.; Merten, Kh.; Ruben, A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

The prompt fission neutron spectra from ^{239}Pu neutron-induced fission has been measured at incident neutron energy 1.49±0.04 MeV. The measurements were carried out by means of time-of-flight technique with pulsed-beam proton tandem accelerator and tritium gas target as a neutron source. The spectra were measured at two angles 90 deg and 150 deg to incident neutron beam. The suing of the ^{252}Cf prompt neutron fission spectrum as a standard for the neutron detector efficiency calibration allowed to minimize influence of collimator channel zone and to avoid the spectrometer time scale calibration uncertainties. The experimental results were compared with generalized Madland-Nix model calculations of prompt fission neutron spectra. The results of the calculations are in a satisfactory agreement with an experimental results. 21 refs.; 3 figs.; 1 tab.

15711 (INIS-SU–236/A, pp. 125-130) **Two-dimensional method for delayed neutron spectra measuring.** Maksyutenko, B.P.; Balakshev, Yu.F.; Ignat'ev, S.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

The delayed-neutron spectra of four groups for U-235 thermal neutron fission were reconstructed from experimental information obtained by two-dimensional method. The average energies of spectra and relative yields were calculated. Some possibilities of the two-dimensional method were pointed to control the obtained results, which were compared with data of other authors. 5 refs.; 6 figs.; 1 tab.

15712 (LBL–29357) **In-beam studies of high-spin states of actinide nuclei.** Stoyer, M.A. (Lawrence Berkeley Lab., CA (USA). Nuclear Science Div.). Lawrence Berkeley Lab., CA (USA). 15 Nov 1990. 216p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91009675. Source: OSTI; NTIS; INIS; GPO Dep.

High-spin states in the actinides have been studied using Coulomb- excitation, inelastic excitation reactions, and one-neutron transfer reactions. Experimental data are presented for states in ^{232}U, ^{233}U, ^{234}U, ^{235}U, ^{238}Pu and ^{239}Pu from a variety of reactions. Energy levels, moments-of-inertia, aligned angular momentum, Routhians, gamma-ray intensities, and cross-sections are presented for most cases. Additional spectroscopic information (magnetic moments, M_1/E_2 mixing ratios, and g-factors) is presented for ^{233}U. One- and two-neutron transfer reaction mechanisms and the possibility of band crossings (backbending) are discussed. A discussion of odd-A band fitting and Cranking calculations is presented to aid in the interpretation of rotational energy levels and alignment. In addition, several theoretical calculations of rotational populations for inelastic excitation and neutron transfer are compared to the data. Intratheory comparisons between the Sudden Approximation, Semi-Classical, and Alder-Winther-DeBoer methods are made. In connection with the theory development, the possible signature for the nuclear SQUID effect is discussed. 98 refs., 61 figs., 21 tabs.

The chart of the nuclides for light nuclei showing the results obtained at GANIL is analyzed. Some aspects of the need for mass measurements are discussed. The basic principles involving a significant mass measurement are explained. The results of the two - neutron separation energies S2n for some elements between z = 52 and z = 63, for odd - nuclei and in the region including the new magic N=15 are provided. The study shows that the mass surface can reveal some properties of the nuclei.

Submitted for publication.

In recent years a variety of statistical theories have been developed concerning multistep direct (MSD) nuclear reactions. In addition, dominant in applications is a whole class of semiclassical models that may be subsumed under the heading of 'generalized exciton model': these are basically MSD-type extensions on top of compound-like concepts. In this report the relationship between their underlying statistical MSD-postulates are highlighted. A common framework is sketched that enables to generate the various MSD theories through assigning statistical properties to different parts of the nuclear Hamiltonian. Then it is shown that distinct forms of nuclear randomness are embodied in the mentioned theories. All these theories appear to be very similar at a qualitative level. In order to explain the high-energy tails and forward-peaked angular distribution typical for particles emitted in MSD reactions, it is imaged that the incident continuum particle stepwise looses its energy and direction in a sequence of collisions, thereby creating new particle-hole pairs in the target system. At each step emission may take place. The statistical aspect comes in because many continuum states are involved in the process. These are supposed to display chaotic behavior, the associated randomness assumption giving rise to important simplifications in the expressions for the MSD emission cross sections. This picture suggests that the mentioned MSD models can be interpreted as variants of essentially one and the same theory. However, this appears not to be the case. To show this the usual MSD distinction within the composite reacting nucleus between the fast continuum particle and the residual system is introduced. One implication is that the mutual residual interactions of the nucleons of the residual core are to be distinguished from those of the leading particle with the residual system. This distinction will turn out to be central to the present analysis. (author).

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst. 1989. 19p. (In Russian). Order Number DE91624010. Source: OSTI; NTIS (US Sales Only); INIS.

General formulae for calculating angular correlations between the directions of three-particle sequential nuclear reaction product escape are derived within the framework of a model-independent approach. Specific expressions for spin-tensors of nucleus-state density matrix, excited by direct reaction mechanism are obtained. 10 refs.

15717 (GSI–91-02(prepr.)) **Production of b and anti b quarks by photon-gluon fusion in heavy-ion collisions.** Hofmann, C. (Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.)); Soff, G.; Schaefer, A.; Greiner, W. Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 14p. Order Number DE91764563. Source: OSTI; NTIS (US Sales Only); INIS.

Electromagnetic Higgs production in heavy-ion collisions at LHC or SSC has been proposed to detect Higgs particles in the mass range $m_Z < m_H < 2m_W$. We consider the fusion of a photon and a gluon into b and anti b quarks as background to the banti b decay of these Higgs particles. We multiplied the cross section for the elementary process $\gamma g \rightarrow$banti b with the photon distribution in the Weizsaecker-Williams approximation and the gluon distribution inside the nucleus. The photon-gluon fusion turns out to be much stronger than the banti b photoproduction background and hides this higgs signal completely. Furthermore we discuss the possibility to utilize the photon-gluon fusion into banti b and canti c in order to determine the gluon distribution of the nucleon inside the nucleus, e.g., at RHIC. (orig.).

Gesellschaft fuer Schwerionenforschung mbH, Darmstadt (Germany, F.R.). Jan 1991. 23p. Order Number DE91764945. Source: OSTI; NTIS (US Sales Only); INIS.

Production of positive kaons in nuclear collisions at energies $\simeq$ 1-10 GeV/nucleon is studied within the 3-dimensional fluid dynamics and hadrochemical kinetics. Two limiting scenarios of kaon evolution are considered: (a) Produced kaons are in a state of thermal- and mechanical equilibrium with the gas of nonstrange hadrons up to a certain freeze-out moment; (b) kaons escape from the system immediately after the production. The model reproduces the total cross sections of Ne+NaF$\rightarrow K^+ +$X, Ne+Pb$\rightarrow K^+ +$X reactions at E_{lab}=2.1 GeV/nucleon and momentum distribution of K^+ in central Si+Au collisions at E_{lab}=13.6 GeV/nucleon. A strong dependence of the K^+-yield on the nuclear equation of state has been shown. (orig.).

15719 (IAE–4854-1) **Nuclear rotation. Part 6: 6.Quasiclassical model for odd nucleons spin alignment.** Kamchatnov, A.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 20p. Order Number DE91625426. Source: OSTI; NTIS (US Sales Only); INIS.

The quasiclassical treatment of the model 'rotator+particle' is suggested. The classical equations of motion for this model are obtained. General solution of these equations is given. The actual for nuclear physics stationary rotations are studied in detail. The applications of model to the phenomenon of alignment of the 'odd nucleons' angular momentum along the vector of angular velocity is discussed. The comparison with the experiment shows a good agreement with the theoretical results. 17 refs.; 4 figs.

The Evaluated Nuclear Structure Data File (ENSDF) is maintained by the National Nuclear Data Center (NNDC) on behalf of international Nuclear Structure and Decay Data Network sponsored by the International Atomic Energy Agency, Vienna. For $A \geq 44$ the file is used to produce the Nuclear Data Sheets. Data for A=5 to 44 are extracted from the evaluations published in Nuclear Physics. The contents of ENSDF are briefly described as is the philosophy and methodology of ENSDF evaluations. Also discussed are the services available at various nuclear data centers and the on-line services of the NNDC. Application codes developed for use with ENSDF are described with the program RADLST used as an example. The interaction of ENSDF evaluations with other evaluations is also discussed. (author). 23 refs, 3 tabs.

15725 (INDC(CUB)–004/L) **Analysis of experimental data on neutron-induced reactions and development of code PCROSS for the calculation of differential pre-equilibrium emission spectra with modelling of level density function: Final report on research contract 5472/RB.** Capote, R. (Higher Inst. of Nuclear Science and Technology, La Habana (Cuba)); Osorio, V.; Lopez, R.; Herrera, E.; Piris, M. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee. Mar 1991. 32p. Translated by the IAEA. Order Number DE91625454. Source: OSTI; NTIS (US Sales Only); INIS.

Translated by the IAEA.

A new PC code PCROSS for neutron induced reaction calculations up to 25 MeV incident energy was developed, where the latest theoretical development in the preequilibrium model was employed. For the proper description of the high energy tail of the emission spectra and excitation function calculations a combination of the Exciton model and direct reaction parametrization was used. In the PCROSS code several models for level density calculations are available. The code is user-friendly, as it included a subroutine to generate the input data. In the present paper some calculation

results for (n,n') and (n,p) emission spectra and for (n,p) and (n,2n) excitation functions up to 20 MeV have been shown. A good description of the experimental data was achieved. 86 refs, 7 figs.

A unique description of emission spectra as well as excitation functions in nuclear reactions is proposed within a pure statistical multistep approach. This approach is based on random matrix physics and derives from Green's function formalism. In this model the total emission spectrum of the reaction is divided in three main parts: The first one is the statistical multistep direct part, the second one is the statistical multistep compound emission, and the third one is the multiple particle emission. 34 refs, 18 figs, 1 tab.

15729 (INDC(NDS)–238/L, pp. 63-73) **Gamma ray emission from multistep compound reactions.** Oblozinsky, P. (Oxford Univ. (UK). Nuclear Physics Lab.); Chadwick, M.B. In *Measurement, calculation and evaluation of photon production cross-sections: Proceedings of the specialists' meeting held in Smolenice, the Czech and Slovak Federal Republic, 5-7 February 1990.* 194p. Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

The multistep compound formalism of Feshbach, Kerman, and Koonin has been extended to include γ ray emission. By allowing the first few simple preequilibrium bound states to decay via electromagnetic transitions rather than particle emission, the large number of high-energy γ rays observed in the experimental data can be understood. It is assumed that single-particle and hole transitions lead to the emission of γ rays, and radial matrix elements for such transitions are estimated by exploiting the inverse process, photoabsorption. Reactions of 14 MeV neutrons with ^{59}Co, ^{93}Nb, and ^{181}Ta are analyzed and it is found that between twenty and fifty percent of cross sections for high-energy γ ray emission can be accounted for by the multistep compound mechanism. (author). 27 refs, 3 figs.

Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

The pre-equilibrium model of the γ emission is used to study the competition of γ and nucleon emission. Mainly we investigated the ratio of γ-to-total emission widths $\Gamma\gamma/\Gamma$tot, the exclusive nucleon spectra, the γ multiplicities (also the differential ones), and the relation of the activation to the integrated cross section for the nucleon radiative capture. All the calculations were performed within a unique master-equation approach to the exciton model, which has been formally extended to cover also the equilibrium (i.e. the compound-nucleus) emission. The results are in strong support to the pre-equilibrium model used for the γ emission. (author). 15 refs, 8 figs, 1 tab.

Order Number DE91624012. Source: OSTI; NTIS (US Sales Only); INIS.

Advanced statistical model of nuclear reactions is used to analyze ^{52}Cr(n,xγ) reactions at 14.6 MeV neutron incident energy.

Calculated are discrete γ ray production cross sections, total γ ray spectrum and average γ ray multiplicities. It is found that integral quantities and data that involve sufficient averaging, such as γ multiplicities, can be predicted with good precision. This is valid also for strong discrete γ lines. Generally, however, discrete γ ray production cross sections cannot be safely predicted better than within a factor of two. Things may even be worse for particular portions of the total γ ray spectrum. (author). 16 refs, 1 fig., 9 tabs.

Photon strength functions derived from discrete resonance data in earlier surveys have been reviewed. Corrections for major non-statistical contributions have been applied and derived systematics for f(E1) and f(M1) values can be used for statistical model calculations. (author). 16 refs, 6 figs, 2 tabs.

The impact of the low energy behaviour of the E1 and the M1 gamma-ray strength functions on statistical model calculations of radiative neutron capture was studied for targets with mass numbers between 55 and 197. We found strong support for models of the E1 strength function with a non-zero limit if the transition energy tends to zero. Such a low energy behaviour is predicted in theoretical work by Kadmenskij et al. and by Sirotkin. The employed strength functions are derived from a generalized Lorentzian in case of E1 and a standard Lorentzian in case of M1 and E2 radiation. The parameters of these strength functions are based on independent experimental data. No normalizations were applied to the strength functions. We, therefore, recommend to use these strength functions in reaction model calculations for applied purposes. (author). 61 refs, 8 figs, 3 tabs.

15735 (INDC(NDS)–238/L, pp. 127-141) **Two-step cascade transitions following neutron capture: A new source of information of photon strength functions.** Becvar, F. (Karlova Univ., Prague (Czechoslovakia). Fakulta Matematicko-Fyzikalni); Chrien, R.E.; Kopecky, J. International Atomic Energy Agency, Vienna (Austria). International Nuclear Data Committee; Ceskoslovenska Komise pro Atomovou Energii, Prague (Czechoslovakia). Nov 1990. The applicability of the sum-coincidence measurements of two-step cascade γ-ray spectra to determination of photon strength functions at intermediate γ-ray energies (3 divided 4 MeV) is discussed. An experiment based on thermal neutron capture in Nd was undertaken at the BNL High Flux Beam Reactor to test this method. To understand the role of various uncertainties in similar experiments a series of model calculations was performed. We present an analysis of our experimental data which demonstrates the high sensitivity of the method to E1 and M1 photon strength functions. (author). 5 refs, 7 figs.

15736 (INDC(NDS)–238/L, pp. 145-147) **High energy gammas in nuclear collisions: Necessary data.** Nosov, A.A. (Radievyj Inst., Leningrad (USSR)); Rimski-Korsakov, A.A.; Yakovlev, R.M.; Zubkov, M.N. Yields and spectra of high-energy gammas, produced in nuclear collisions, are important from a purely scientific and practical point of view. We here demonstrate the insufficiency of relevant data in this field by giving two examples: The study of superdense state of nuclear matter in heavy ion collisions at energies of about 100 MeV/nucleon by means of preequilibrium gammas, and the high energy component of gamma-radiation, produced by proton-nucleus reactions at energies above 150 MeV. 10 refs.

15737 (INIS-SU–236/A, pp. 76-89) **Application of programme system BRAND for analysis of activation experiments.** Androsenko, A.A.; Androsenko, P.A.; Davletshin, A.N.; Tolstikov, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Questions related to application of the BRAND program complex, simulating the processes of neutron radiation transfer by Monte Carlo method for analysing the results of measuring the cross sections by activation method, are considered. Results of calculating the corrections to neutron scattering in the air, in the activated sample, which are compared to results by other authors, are presented. The problem of choosing sufficient statistical accuracy of calculation results obtained is considered, choice criterion is proposed and grounded on the base of analysing the calculation results obtained. Questions related to possibilities of applying the complex when planning the forthcoming experiments, analysing experimental results, are discussed and the desired directions in extending the BRAND program complex capabilities are indicated as well. 8 refs.; 4 figs.; 1 tab.

15738 (INIS-SU–236/A, pp. 90-100) **Neutron cross sections and tin isotope strength functions in method of coupled channels.** Pronyaev, V.G.; Kononov, V.N.; Timokhov, V.M.; Trykov, E.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to conference '50 years of nucleus fission investigations', West Berlin, 2-7 Apr 1989.

Consideration is given to the main representations of the current theoretical description of excited nuclei level density. An essential role of consistent consideration of shell and collective effect is demonstrated in the analysis and systematics of experimental data: neutron resonance density, evaporative spectrum of particles, energy dependence of nuclear fissilities by neutrons, light and heavy charged particles. 34 refs.; 7 figs.; 1 tab.

15740 (INIS-SU–236/A, pp. 15-27) **Effect of ^{238}U neutron strength function uncertainties on resonance structure calculation in unresolved resonance region.** Koshcheev, V.N.; Manturov, G.N.; Sinitsa, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 154p. (In Russian). In *Nuclear constants: Scientific-technical collection.* Order Number DE91003078. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of uncertainty of knowing the mean ^{238}U resonance parameters on the calculation of the factor of self-shielding of a total cross section and the radiation capture cross section and the corresponding Doppler increments is investigated. It is shown that an uncertainty, present in the neutron strength function $S_n^0 \approx (0.9\text{-}1.2)\times10^{-4}$ produces a weak effect on the radiation capture cross section self-shielding description. The effect of the total cross section self-shielding depends on S_n^0 value, but the requirements to the accuracy of its description are met under the uncertainty present in the neutron strength function. 26 refs.; 5 figs.; 1 tab.

Comparison of the data on total cross section oo (γ,n) reaction on ^{58}Ni and ^{56}Fe nuclei with the cross section of emission of energetic photoneutrons from these nuclei confirms nonstatic nature of high-energy component of neutron spectra. 8 refs.; 1 fig.; 3 tabs.

15745 (IPNO-DRE–8946) **Deep inelastic transfers: a way to dissipate energy and angular momentum for reactions in the Fermi energy domain.** Tassan-Got, L.; Stephan, C. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1989. 23p. Order Number DE91767820. Source: OSTI; NTIS (US Sales Only).

A model of stochastic transfers, using a Monte Carlo method and accounting for sequential evaporation, has been elaborated and applied to reactions in the Fermi energy range: between 27 and 44 MeV-A. Its results have been compared to a large set of experimental data: energy spectra, correlations between projectile-like and target-like products, isotopic distributions, neutron multiplicities. Major features of these reactions are reproduced. Beyond this agreement, a modification of the transfer mechanism is needed to incorporate preequilibrium emission.

15746 (IPNO-DRE–9006) **Heavy-ion peripheral collisions in the Fermi energy domain: fragmentation processes or dissipative collisions.** Borderie, B.; Rivet, M.F.; Tassan-Got, L. Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. 98p. Order Number DE91767821. Source: OSTI; NTIS (US Sales Only).

For several years a new field in nuclear physics has been opened by the opportunity to accelerate heavy ions through an energy domain including the Fermi energy of nucleons. This new domain has to be seen as a link between dissipative processes observed at low energies, dominated by mean field considerations, and high energy collisions for which nucleon-nucleon collisions play an important role. This paper reviews our present knowledge on peripheral collisions. A reminder of contiguous energy domains is done as well as their extension in the new field. Specific calculations are also presented. Finally a wide comparison between experiments and calculations is performed. A fast dissipative stage proves to be responsible for the dominant mechanisms involved, at least when the incident energy is lower than 50 MeV/nucleon.

15747 (IPNO-DRE–9008) **Signatures for isoscalar spin transitions excited in (d, d$'$) reactions.** Morlet, M. (Paris-11 Univ., 91 - Orsay (FR). Inst. de Physique Nucleaire); Willis, A.; Van de Wiele, J.; Marty, N.; Guillot, J.; Langevin-Joliot, H.; Bimbot, L.; Rosier, L.; Tomasi-Gustafsson, E.; Edwards, G.W.R.; Fergerson, R.W.; Glashausser, C.; Beatty,.Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire. 1990. 12p. Order Number DE91767804. Source: OSTI; NTIS (US Sales Only).

Three different signatures for isoscalar spin transitions in nuclei have been tested in the ^{12}C(d, d$'$)^{12}C reaction at 400 MeV. These signatures have values of close to zero for the natural parity states, and values ranging from 0.22 to 0.50 for the $\Delta S=1$ $\Delta T=0$, 12.7 MeV state.

15748 (ITEF–138-89) **Fast deuteron production in proton-nuclear interactions.** Safronov, G.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 28p. (In Russian). Order Number DE91624028. Source: OSTI; NTIS (US Sales Only); INIS.

Process of fast deuteron production in proton-nuclear interactions is considered within the framework of fusion model. The model of correlated tube, enabling to describe satisfactorily the experimental data without free parameters, is descussed. 33 refs.; 10 figs.

15749 (ITEP–145-88) **The relativistic correction to the triton binding energy in the framework of relativistic Hamiltonian dynamics.** Kondratyuk, L.A.; Lev, F.M.; Solov'ev, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1988. 41p. Order Number DE91623969. Source: OSTI; NTIS (US Sales Only); INIS.

The relativstic. 48 refs.; 2 tabs.

15750 (LBL–29502) **Calculation of cross sections for binary reactions between heavy ion projectiles and heavy actinide targets.** Hoffman, D.C.; Hoffman, M.M. Lawrence Berkeley

Lab., CA (USA). Nov 1990. 42p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91010222. Source: OSTI; NTIS; INIS; GPO Dep.

The computer program, described in this report, is identified as PWAVED5. It was developed to calculate cross sections for nucleon transfer reactions in low energy heavy ion bombardments. The objective was to calculate cross sections that agree with experimental results for ions of different charge and mass and to develop a predictive capability. It was undertaken because previous heavy ion calculations, for which programs were readily available, appeared to focus primarily on reactions resulting in compound nucleus formation and were not particularly applicable to calculations of binary reaction cross sections at low interaction energies. There are to principal areas in which this computation differs from several other partial wave calculations of heavy-ion reaction cross sections. First, this program is designed specifically to calculate cross sections for nucleon exchange interactions and to exclude interactions that are expected to result in fusion of the two nuclei. A second major difference in this calculation is the use of a statistical distribution to assign the total interaction cross section to individual final mass states.

15751 (LBL–29889) **^{176}Lu: An unreliable s-process chronometer.** Lesko, K.T.; Norman, E.B.; Larimer, R.M.; Sur, B. Lawrence Berkeley Lab., CA (USA). Nov 1990. 29p. Sponsored by USDOE, Washington, DC (USA); National Science Foundation, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91010205. Source: OSTI; NTIS; INIS; GPO Dep.

A level scheme of ^{176}Lu up to ~1400 keV excitation energy is deduced from a gamma-gamma coincidence experiment and previously published particle transfer data. 170 gamma-ray transitions are placed between 85 levels, confirming many of the previously established levels and some of the decay scheme. A level at 835.5 keV ($J^{\pi} = 5^-$, $t_{1/2} < 10$ ns) decays with substantial strength to both the ground state (7^-, 4.08×10^{10} yr) and the 122.9 keV isomer (1^-, 3.7 hr). The presence of this level guarantees the thermal equilibration of ^{176}Lu^{g,m} for temperatures greater than 3×10^8 K and therefore during s-process nucleosynthesis. The resulting extreme temperature sensitivity of its effective half-life rules out the use of ^{176}Lu as an s-process chronometer. The use of ^{176}Lu to determine s-process temperatures is discussed. 30 refs., 11 figs., 3 tabs.

15752 (LIYaF–1477) **Energy distribution of intense gamma lines caused by intranucleon excitations.** Sumbaev, O.I. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 20p. (In Russian). Order Number DE91623970. Source: OSTI; NTIS (US Sales Only); INIS.

Experimental. 7 refs.; 4 figs.; 2 tabs.

15753 (LIYaF–1539) **Hartree-Fock method, generalized model of nucleus and electron scattering on nuclei.** Domchenkov, O.A. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 45p. (In Russian). Order Number DE91623971. Source: OSTI; NTIS (US Sales Only); INIS.

The relation between the Hartree-Fock calculations and the electron-nucleus scattering data is a problem of consideration. Hartree-Fock wave functions as an intrinsic function of the Bohr-Mottelson model has been examined. The relations between the intrinsic and external single-particle densities depending on nuclear state symmetry and generalizing the well known relation between the intrinsic and external quadrupole moments are obtained. The centre-of-mass problem is solved as a problem of comparison of a theory with experiment. Calculated form factors for the 1p-shell are given and discussed. 22 refs.; 1 fig.

15754 (LIYaF–1551) **On electron mass hidden in the energies of the intense gamma lines.** Sumbaev, O.I. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 26p. (In Russian). Order Number DE91623972. Source: OSTI; NTIS (US Sales Only); INIS.

tHE STATISTICALLY. 10 refs.; 2 figs.; 2 tabs.

15755 (LIYaF–1565) **The role of the final state interaction in the ionization of the K- shell during the β-decay of nuclei.** Drukarev, E.G.; Trzhaskovskaya, M.B. AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki. 1989. 18p. Order Number DE91624066. Source: OSTI; NTIS (US Sales Only); INIS.

We have calculated the contribution of the final state interaction to the ionization of the K-shell during the β^- and β^+ decays. The contributions to the spectra of the β particles and to the total probability of the K shell ionization are obtained. The disagreement between the calculated values and the experimental data for the latter is shown to diminish strongly. The influence of the secondary electrons on the distribution is also determined. 27 refs.; 2 figs.; 2 tabs.

15756 (ORNL/TM–11812) **Computed secondary-particle energy spectra following nonelastic neutron interactions with ^{12}C for E_n between 15 and 60 MeV: Comparisons of results from two calculational methods.** Dickens, J.K. Oak Ridge National Lab., TN (USA). Apr 1991. 71p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010454. Source: OSTI; NTIS; INIS; GPO Dep.

The organic scintillation detector response code SCINFUL has been used to compute secondary-particle energy spectra, $d\sigma/dE$, following nonelastic neutron interactions with ^{12}C for incident neutron energies between 15 and 60 MeV. The resulting spectra are compared with published similar spectra computed by Brenner and Prael who used an intranuclear cascade code, including alpha clustering, a particle pickup mechanism, and a theoretical approach to sequential decay via intermediate particle-unstable states. The similarities of and the differences between the results of the two approaches are discussed. 16 refs., 44 figs., 2 tabs.

15757 (OUP–91-05) **Folded-diagram effective interactions with the Bonn meson-exchange potential model.** Hjort-Jensen, M. (Oslo Univ. (Norway). Fysisk Inst.); Osnes, E.; Muether, H. Oslo Univ. (Norway). Fysisk Inst. Feb 1991. 50p. Order Number DE91624431. Source: OSTI; NTIS (US Sales Only); INIS.

A modern version of the Bonn One-Boson-Exchange potential has been used in a folded diagram expansion of the effective interation appropriate for sd - shell nuclei. Two different techniques for the summation of the folded diagrams have been studied, including all one-body and two-body valence-linked diagrams through third order, and using both a harmonic-oscillator (HO) basis and a Brueckner-Hartree-Fock (BHF) basis. The folded-diagram expanision of Kuo and co-workers shows a slow convergence when the HO choice is made, whereas the vertex renormalization procedure of Lee and Suzuki results in a rapidly converging expanision for the effective interaction. The convergence is very good for both iteration techniques when the self-consistent BHS basis is used. 31 refs., 12 figs., 7 tabs.

15758 (PCCF-RI–9007) **An experiment to detect quark effects in nuclei.** Bertin, P.Y. (Clermont-Ferrand-2 Univ., 63 - Aubiere (FR). Lab. de Physique Corpusculaire); Guichon, P.A.M. Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire. 1990. 10p. Order Number DE91767805. Source: OSTI; NTIS (US Sales Only).

We propose to study inside the nuclei, the leptonic decay (e^+e^-), of light meson vector rho, to detect the effect of coupling of nuclear field with a qantiq. If the effect exists we must observe a downward shift ($\simeq$ 120 MeV) in the invariant mass spectrum of the lepton pair. We give a prediction of the distribution expected in future experiments.

15759 (UCRL–53946) **NUSTART: A PC code for NUclear STructure And Radiative Transition analysis and supplementation.** Larsen, G.L.; Gardner, D.G.; Gardner, M.A. Lawrence Livermore National Lab., CA (USA). Oct 1990. 87p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010045. Source: OSTI; NTIS; INIS; GPO Dep.

NUSTART is a computer program for the IBM PC/At. It is designed for use with the nuclear reaction cross-section code STAPLUS, which is a STAPRE-based CRAY computer code that is being developed at Lawrence Livermore National Laboratory. The NUSTART code was developed to handle large sets of discrete nuclear levels and the multipole transitions among these levels; it operates in three modes. The Data File Error Analysis mode analyzes an existing STAPLUS input file containing the levels and their

multipole transition branches for a number of physics and/or typographical errors. The Interactive Data File Generation mode allows the user to create input files of discrete levels and their branching fractions in the format required by STAPLUS, even though the user enters the information in the (different) format used by many people in the nuclear structure field. In the Branching Fractions Calculations mode, the discrete nuclear level set is read, and the multipole transitions among the levels are computed under one of two possible assumptions: (1) the levels have no collective character, or (2) the levels are all rotational band heads. Only E1, M1, and E2 transitions are considered, and the respective strength functions may be constants or, in the case of E1 transitions, the strength function may be energy dependent. The first option is used for nuclei closed shells; the bandhead option may be used to vary the E1, M1, and E2 strengths for interband transitions. K-quantum number selection rules may be invoked if desired. 19 refs.

15760 (ANL/CP–71146) **Present status and future prospects of neutronics Monte Carlo.** Gelbard, E.M. Argonne National Lab., IL (USA). [1990]. 22p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. (CONF-900970–6: International conference on Monte Carlo methods in neutron and photon transport, Budapest (Hungary), 25-28 Sep 1990). Order Number DE91010573. Source: OSTI; NTIS; GPO Dep.

Cross sections uncertainties are now almost the only inherent limitations in our Monte Carlo capabilities. For this reason Monte Carlo has come to occupy a special position, interposed between experiment and other computational techniques. More and more often deterministic methods are tested by comparison with Monte Carlo, and cross sections are tested by comparing Monte Carlo with experiment. In this way one can distinguish very clearly between errors due to flaws in our numerical methods, and those due to deficiencies in cross section files. The special role of Monte Carlo as a benchmarking tool, often the only available benchmarking tool, it makes it crucially important that this method should be polished to perfection. Unfortunately it is far from perfect now, as one can see by surveying the problems we still face. Turning to these problems in this paper, we follow the pattern of the earlier review starting again with a discussion of eigenvalue calculations.

15761 (EML–529) **A VAX version of the coupled Monte Carlo transport codes HETC and MORSE-CGA.** Sanna, R.S. USDOE Environmental Measurements Lab., New York, NY (USA). Dec 1990. 105p. Sponsored by USDOE, Washington, DC (USA). Order Number DE91009714. Source: OSTI; NTIS; INIS; GPO Dep.

The three-dimensional Monte Carlo transport codes, HETC and MORSE-CGA, are distributed by the Radiation Shielding Information Center at Oak Ridge National Laboratory. These codes, written for IBM-3033 computers, have been installed on the Environmental Measurements Laboratory's VAX/11-750 computer for operation in a coupled mode to study the transport of neutrons over the energy range from thermal to several GeV. This report is a guide to their use on the VAX/11-750 computer. 26 refs., 6 figs., 14 tabs.

15762 (FEI–1984) **Solution of two-dimensional equations of neutron transport in $4P_0$-approximation of spherical harmonics method.** Polivanskij, V.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst. 1989. 12p. (In Russian). Order Number DE91623951. Source: OSTI; NTIS (US Sales Only); INIS.

The method to solve two-dimensional equations of neutron transport using $4P_0$-approximation is presented. Previously such approach was efficiently used for the solution of one-dimensional problems. New an attempt is made to apply the approach to solution of two-dimensional problems. Algorithm of the solution is given, as well as results of test neutron-physical calculations. A considerable as compared with diffusion approximation is shown. 11 refs.

15763 (FEI–1985) **On one approximation of transport equation in scatteringless medium.** Usanov, V.I. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1989. 29p. (In Russian). Order Number DE91623958. Source: OSTI; NTIS (US Sales Only); INIS.

System of two equations with two unknowns one of which is reduced to diffusion equation with diffusion factor representing continuous function of coordinates is obtained on the basis of resolution of radiation phase density in scatteringless matter using basis functions introduced in the paper and determination of corresponding boundary conditions. Using plane geometry with isotropic and monodirected source as an example it is shown that this system is solvable one and basically with selection of respective weight multipliers in boundary conditions it allows to obtain presise solutions of these problems. Some non-traditional efforts with vectors are determined and used in terms of the suggested approach. 4 refs.; 4 figs.

15764 (IAE–4968-14) **Horizontal neutron microscope.** Arzumanov, S.S. (and others); Karaseva, I.A.; Kudryashov, Yu.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 16p. (In Russian). Order Number DE91623952. Source: OSTI; NTIS (US Sales Only); INIS.

The principle of action and construction of neutron microscope with ultracold neutrons are described. The main distinction of this set-up is horizontal neutron flight path. Preliminary results of first experiments with this microscope are presented. 15 refs.; 11 figs.

15765 (IAEA-NDS–89(Rev.0)) **XCOM: Photon cross-sections on a PC. Version 1.2 of 9 May 1987.** Berger, M.J. (National Inst. of Standards and Technology, Gaithersburg, MD (USA)); Hubbell, J.H.; Lemmel, H.D. (ed.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Nov 1987. 1p. Order Number DE91623959. Source: OSTI; NTIS (US Sales Only); INIS.

A computer program and data base are presented which can be used to calculate, with a personal computer, photon cross-sections for scattering, photoelectric absorption and pair production, as well as total attenuation coefficients, in any element, compound or mixture, at energies from 1 keV to 100 GeV. A set of two diskettes is available upon request, costfree, from the IAEA Nuclear Data Section. (author).

15766 (IAEA-NDS–97(Rev.1)) **ENDF/B-6 Thermal Neutron Scattering Law Library.** Goulo, V.; Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 218p. Order Number DE91625421. Source: OSTI; NTIS (US Sales Only); INIS.

This library contains scattering law data S (α,β) for 9 materials used for thermal reactor and shielding calculations: H_20, D_20, Be, Be0, C, CH_2, C_6H_6, $U0_2$. ZrH_x for temperatures from 296 to 1000 or 1200 deg. K. Data are in ENDF-3 or in ENDF-6 format. The library is available from the IAEA Nuclear Data Section on magnetic tape, costfree upon request. (author). Refs, figs and tabs.

Translated by the IAEA. Original report in Russian was distributed as INDC(CCP)-310/G.

The results of the measurement and analysis of neutron transmission using the total cross-section and of self-indication of the neutron capture cross-sections for ^{238}U in the 5-110 keV neutron energy region are presented. 16 refs, 3 figs, 4 tabs.

15770 (INIS-mf–12797) **Fluence and spectrometry of 14 Mev neutrons. Application to the excitation function of 56-Fe(n,p) 56-Mn reaction.** Chiadli, A. Universite Mohammed 5, Rabat (Morocco). Faculte des Sciences. 3 Jul 1982 101p. (In French). Order Number DE91625422. Source: OSTI; NTIS (US Sales Only); INIS.

The fluence and the spectrometry of 14 Mev neutrons produced by the 400 Kv S.A.M.E.S. neutron generator of Nuclear Physics Laboratory of Rabat (L.P.N.R.) have been studied to determine the parameters influencing the neutron energy and consequently the cross sections measurement, i.e. the nuclear beam D_2^+/D^+ ratio, the tritium profile and the atomic Tritium/Titane ratio in the Ti-T target. These parameters are determined using a fitting with experimental curve D = f(THT) (neutrons outcoming versus very high voltage). The presence of D^+ and D_2^+ in the deutons beam leads to two neutron groups. The energy calculation has shown a very high discrepancy between these two groups of neutrons around $\theta = 0^0$, whereas it is negligible around $\theta = 98^0$. An excellent agreement is obtained between the neutrons average energy calculated taking into account the parameters cited above and the value measured using cross sections ratio of 90-Zr (n,2n) 89m+g-Zr and 93-Nb(n,2n)92m-Nb reactions. The neutrons distribution has also been determined in order to show up the neutron flux anisotropy. An application of this study to the excitation function of 56-Fe(n,p) 56-Mn reaction between 13.77 and 14.83 has been carried out. 19 figs., 26 tabs., 42 refs. (author).

15771 (INIS-SU–232, pp. 11-14) **Electromagnetic radiation of monodirected current pulse in transparent dispersionless medium.** Chernukhin, Yu.I.; Simonenko, V.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1988. 43p. (In Russian). In *Theoretical and applied physics: Scientific-technical collection.* Order Number DE91003077. Source: OSTI; NTIS (US Sales Only); INIS.

Solution related to electromagnetic radiation (EMR) of monodirected current pulse in the transparent medium without dispersion under its excitation by ionizing radiation source (e.g. fast electrons and γ-quanta) is obtained and analysed. A series of interesting features of such radiation is indicated, including EMR duration reduction in an ultrarelativistic case polarization, high anisotropy, connection with Vavilov-Cherenkov effect and transition radiation. 5 refs.; 2 figs.

15772 (INIS-SU–234, pp. 37-46) **Account for resonance effects in multigroup neutron calculations.** Goncharov, G.A.; Gorelov, V.P.; Grebennikov, A.N.; Malinovskaya, E.V.; Petrov, Yu.V.; Farafontov, G.G.; Yudintsev, V.F. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 82p. (In Russian). In *Simulation of physical processes: Scientific-technical collection.* Order Number DE91003090. Source: OSTI; NTIS (US Sales Only); INIS.

Two methods of resonance effects account in multigroup neutron calculations: the method of factors of resonance self-shielding of cross sections and the subgroup method, are considered. Ways of estimations of resonance specific features of a weight function used when obtaining factors of resonance self-shielding of cross sections are discussed. Specific features of more effective way of resonance effects account related to application of the subgroup method are considered. 8 refs.; 1 fig.

15773 (INIS-SU–235, pp. 16-23) **Isotropization of constants of neutron elastic scattering.** Goncharov, G.A.; Gorelov, V.P.; Farafontov, G.G.; Khoruzhij, V.Kh. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 119p. (In Russian). In *Simulation of physical processes: Scientific-technical collection.* Order Number DE91003084. Source: OSTI; NTIS (US Sales Only); INIS.

The comparison results of possible ways of isotropization of scattering group constants are presented. Special attention is paid to investigation of sequences of occurrence of negative transport constants. The simplest way of negatives limitation is suggested. The results of calculations permitting to separate the most preferable way of isotropization to use it when solving problems on fast neutron transport are presented. 12 refs.; 1 fig.

15774 (INIS-SU–235, pp. 42-48) **On solution of P_{2N-1} - approximation of neutron transport equation in sphere with central point isotropic source.** Gorelov, V.P.; Travin, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 119p. (In Russian). In *Simulation of physical processes: Scientific-technical collection.* Order Number DE91003084. Source: OSTI; NTIS (US Sales Only); INIS.

Full solution of the P_{2N-1}-approximation of a neutron transport equation in the central point of the sphere containing a point isotropic source at the beginning of coordinates is obtained. Unknown coefficients entering this solution are suggested to determine by the Adamskaya-Godunov method. 6 refs.

15775 (IYaF–89-129) **Anisotropy of cross sections of X-ray Raman scattering in carbon.** Chernov, V.A.; Mytnichenko, S.V.; Sheromov, M.A. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1989. 9p. (In Russian). Order Number DE91623962. Source: OSTI; NTIS (US Sales Only); INIS.

Anisotropy of differential cross section of X-ray Raman scattering was detected in high-ordered pyrographite (HOPG). The most intensive value of this effect is observed near Raman scattering excitation threshold. Variations of the shape and energy position of Raman band edge are explained by dependence of π^* and σ^* contribution of vacant electron states into scattering differential cross section on direction of pulse transferred to 1s-electron. Thus, spectroscopy of inelastic X-ray Raman scattering gives, like absorption polarization spectroscopy, information on space distribution of electron vacant states. 7 refs.; 3 figs.

15776 (JAERI-M–90-203) **Evaluation of the computer code system RADHEAT-V4 by analysing benchmark problems on radiation shielding.** Sakamoto, Yukio (Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment); Naito, Yoshitaka (eds.). Japan Atomic Energy Research Inst., Tokyo (Japan). Nov 1990. 310p. (In Japanese). Order Number DE91767973. Source: OSTI; NTIS (US Sales Only); INIS.

A computer code system RADHEAT-V4 has been developed for safety evaluation on radiation shielding of nuclear fuel facilities. To evaluate the performance of the code system, 18 benchmark problem were selected and analysed. Evaluated radiations are neutron and gamma-ray. Benchmark problems consist of penetration, streaming and skyshine. The computed results show more accurate than those by the Sn codes ANISN and DOT3.5 or the Monte Carlo code MORSE. Big core memory and many times I/O are, however, required for RADHEAT-V4. (author).

15777 (JAERI-M–90-213) **Neutron transmission measurements on gallium in the resonance region.** Ohkubo, Makio (Japan Atomic Energy Research Inst., Tokai, Ibaraki (Japan). Tokai Research Establishment). Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1990. 20p. Order Number DE91767864. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron transmission measurements were made on natural gallium using a TOF spectrometer of the Japan Atomic Energy Research Institute linear accelerator. Neutron resonance parameters are obtained for 54 levels in the energy region extended up to 10.4 keV. The average level spacing D and the s-wave strength function

S_0 are deduced to be: D = 185 +- 12 eV, S_0 = (1.2 +- 0.2) x 10^{-4} below 10.4 keV. (author).

15778 (KAPL–4721) **Benchmark measurements and calculations of a three-dimensional neutron streaming experiment.** Barnett, D.A. Jr. Knolls Atomic Power Lab., Schenectady, NY (USA). Feb 1991. 37p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC12-76SN00052. (CONF-910414–33: International topical meeting on advances in mathematics, computation and reactor physics, Pittsburgh, PA (USA), 28 Apr - 2 may 1991). Order Number DE91010692. Source: OSTI; NTIS; INIS; GPO Dep.

An experimental assembly known as the Dog-Legged Void assembly was constructed to measure the effect of neutron streaming in iron and void regions. The primary purpose of the measurements was to provide benchmark data against which various neutron transport calculation tools could be compared. The measurements included neutron flux spectra at four places and integral measurements at two places in the iron streaming path as well as integral measurements along several axial traverses. These data have been used in the verification of Oak Ridge National Laboratory's three-dimensional discrete ordinates code, TORT. For a base case calculation using one-half inch mesh spacing, finite difference spatial differencing, an S_{16} quadrature and P_1 cross sections in the MUFT multigroup structure, the calculated solution agreed to within 18% with the spectral measurements and to within 24% of the integral measurements. Variations on the base case using a fewgroup energy structure and P_1 and P_3 cross sections showed similar agreement. Calculations using a linear nodal spatial differencing scheme and fewgroup cross sections also showed similar agreement. For the same mesh size, the nodal method was seen to require 2.2 times as much CPU time as the finite difference method. A nodal calculation using a typical mesh spacing of 2 inches, which had approximately 32 times fewer mesh cells than the base case, agreed with the measurements to within 34% and yet required on 8% of the CPU time. 5 refs., 9 figs., 9 tabs.

15779 (KAPL–4724) **Three-dimensional nodal transport using the simplified P-L method.** Gamino, R.G. Knolls Atomic Power Lab., Schenectady, NY (USA). Dec 1990. 23p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC12-76SN00052. (CONF-910414–32: International topical meeting on advances in mathematics, computation and reactor physics, Pittsburgh, PA (USA), 28 Apr - 2 may 1991). Order Number DE91010214. Source: OSTI; NTIS; INIS; GPO Dep.

A nodal Simplified P-L (SPL) transport method has been extended to three-dimensional X-Y-Z geometry. The SPL equations, which represent an approximate form of the spherical harmonics equations, have been coupled with a fifth order Nodal Expansion Method (NEM). Numerical results from several eigenvalue problems show that the SPL method eliminates >80% of the diffusion theory error is these problems. The method also produces reasonably accurate solutions in two medium-penetration neutron attenuation problems. In addition, for a given mesh spacing, no significant increase in spatial truncation error has been observed as the order of expansion is increased. Computational effort is a factor of two (SP3) to four (SP7) times diffusion theory. This work indicates that the SPL method has very good potential for improved analysis of reactor core and attenuation problems. 20 refs., 10 figs., 8 tabs.

15780 (LA-UR–90-3000) **Los Alamos Science, Number 19, 1990: Neutron scattering.** Cooper, N.G. (ed.). Los Alamos National Lab., NM (USA). 1990. 214p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. Order Number DE91009371. Source: OSTI; NTIS; INIS; GPO Dep.

This article explores the physics of various neutron-scattering processes, introduces the experimental techniques and instruments that make neutron scattering so versatile, and discusses the single equation that unifies the interpretation of neutron scattering data. The history of the field, its successes around the world, its present problems in the United States, and the plans for opening it to a wide spectrum of users from academia and industry. This articles traces neutrons from their "birth" in the spallation target through beam-tailoring devices and scattering samples to their "death" in neutron detectors. Samll-angle neutron-scattering experiments provide evidence that calmodulin, a protein that mediates calcium regulation of biological processes, is flexible in solution. Neutron scattering can detect subtle structures beneath the disorder that give advanced materials their extraordinary combinations of strength, elasticity, and low density. Recent neutron-scattering experiments on model systems are revealing how metal atoms loosen the bonds of hydrogen molecules, and essential first step in hydrogenation reactions. Combining data from neutron and x-ray diffraction is the only way to resolve ambiguities in the crystal structure of various materials, including high-temperature superconductors. Although the Bose condensate cannot be observed directly, an interpretation of neutron-scattering data according to a new first-principles theory of final-state effects has at last confirmed its existence in superfluid helium. The maximum entropy method has been applied successfully to neutron-scattering data and could even influence the design of neutron-scattering instruments.

15781 (LA-UR–91-863) **Coupled proton/neutron transport calculations using the S_N and Monte Carlo methods.** Filippone, W.L. (Arizona Univ., Tucson, AZ (USA). Dept. of Nuclear and Energy Engineering); Little, R.C.; Morel, J.E.; MacFarlane, R.E.; Young, P.G. Los Alamos National Lab., NM (USA). [1991]. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910414–26: International topical meeting on advances in mathematics, computation and reactor physics, Pittsburgh, PA (USA), 28 Apr - 2 may 1991). Order Number DE91009949. Source: OSTI; NTIS; GPO Dep.

Coupled charged/neutral article transport calculations are most often carried out using the Monte Carol technique. For example, the ITS, EGS, and MCNP (Version 4) codes are used extensively for electron/photon transport calculations while HETC models the transport of protons, neutrons and heavy ions. In recent years there has been considerable progress in deterministic models of electron transport, and many of these models are applicable to protons. However, even with these new models (and the well established models for neutron transport) deterministic coupled neutron/proton transport calculations have not been feasible for most problems of interest, due to a lack of coupled multigroup neutron/proton cross section sets. Such cross sections sets are now being developed at Los Alamos. Using these cross sections we have carried out coupled proton/neutron transport calculations using both the S_N and Monte Carlo methods. The S_N calculations used a code called SMARTEPANTS (simulating many accumulative Rutherford trajectories, electron, proton and neutral transport slover) while the Monte Carlo calculations are done with the multigroup option of the MCNP code. Both SMARTEPANTS and MCNP require standard multigroup cross section libraries. HETC on the other hand, avoids the need for precalculated nuclear cross sections by modeling individual nucleon collisions as the transporting neutrons and protons interact with nuclei. 21 refs., 1 fig.

KRB-IV. Chast' 1.

Introduction of international SI unit system in the field of ionizing radiations in the USSR is considered. Attention is paid to regulations formulated by Commision on ionizing radiation measurements of Methodologic Councile of the USSR State Comittee for Standards, Directions Introduction and application of 8.417-81 Standards, Units of physical quantities, concerning ionizing radiations recommended all ministries and organizations to comlete changes to SI unit system by January 1, 1990. Along with SI units use of series of off-system units for unlimited term is admitted. For some particles energy electron-volt units are allowed, but joules should not be used. Absorbed dose and dose rate SI units - Gy and Gy/s in radiotherapy and radiation protection are more preparable than μGy/min. Kerma units in Si unit system is Gy gray (Gy). Equivalent dose units are μZv. mZv. Becquerel (Bg) is a SI unit of radionuclide activity in source.

15785 (INIS-SU–231, pp. 60-62) **Account and standardization of collective doses at NPP with WWER.** Romanov, V.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

A problem of account and standardization of collective doses at NPP with the WWER-1000 reactor in the course of different procedures (scheduled-preventive maintenance-SPM, reactor fueling) is considered. Actuality of placing in on-line condition with acquisition, processing, compilation and transmission to the users of radiation monitoring data is stressed. This problem may be solved using special computers or on the bais of high-power computers by designing a subsystem for acquisition, and processing of data on collective doses and radiation cituation, or joining it with reliability data acquisition and processing system.

15786 (INIS-SU–231, pp. 82-84) **Use of radiation safety principles in technique of release standardization of radioactive materials disposed to river systems.** Pisarev, V.V.; Ctrunehnze, R.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

Methods of calculating maximum permissible disposals (MPD) of radioactive materials to river systems are described. Requirements of Radiation safety standards RSS-76, specifying the levels of ionizing radiation effect on human body, form the basis of these methods. MPD values are determined from the ratio of dose relationship with parameters, defining strength of the source of internal and external irradiation effects.

15787 (INIS-SU–231, pp. 8-13) **Main trends in activities of national committee on radiation protection.** Il'in, L.A.; Buldakov, L.A.; Moskalev, U.I.; Avetisov, G.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

Activities of National Comittee on Radiation Protection (NCRP) in related to the problems of intensive development of nuclear power and radiation application to national economy are considered. It is marked that the most important scientific aspects of NCRP activities are stimulation, accumulation, systematization, discussion and concideration of research works and materials on different problems of standardization of ionizing radiations and radiation safety regulations. The NCRP activities for the period of 1982-86 included main trends.

15788 (INIS-SU–231, pp. 3-8) **Actual problems of radiation safety.** Vorob'ev, E.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

Due to expansion and development of peaceful use of nuclear power actual problems of radiation safety, that at present has become an independent discipline with its own methods and investigation means, are considered. It is marked that development of safety methods and means, increase of personnel qualification and knowledge are the most actual safety problems.

KRB-IV. Chast' 1.

Radiation-hygienic assessment of heat supply from Beloyarsk Npp AMB-100, AMB-200 and BN-600 reactors is carried out. Assessment was based on results of determination of β-activity and radionuclide composition of heating media, hot water supply in comparison with their indices in domestic and drinking water. It is shown that reactor radionuclides do not penetrate into heat supply system of Beloyarsk NPP settlement. Radionuclide deposition in district heating devices is investigated by γ-spectrometry method. Results of studying γ-radiation from heaters of residential and public buildings showed that exposure dose is less than the natural background indoors.

15790 (INIS-SU–231, pp. 33-36) **Forecasting radioisotope effluent into atmosphere according to the signals of detectors of the standard system for fuel can tightness control at the RBMK-1000 reactor.** Zhemchugov, V.P. (and others); Komarov, V.I.; Tkachenko, V.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). KRB-IV. Chast' 1.

Standardization of NPP personnel labour from the views point of radiation protection is considered. The choice of optimmum equipment maintenance is based on determination of optimum personnel number and minimizing personnel and collective doses. Optimization of NPP operating personnel number is possible on the basis of maintenance standards. Formulation of the above-mentioned standards is based on classification of time requirements for equipment maintenance by operating NPP personnel per shift. Optimization of norms for eqiopment maintenance by operating NPP personnel must be based on a complex of technical-and-economic and hygienic criteria.

15792 (INIS-SU–231, pp. 65-68) **Benefit of actions concerning minimization of collective doses to NPP maintenance personnel.** Volkova, A.V. (and others); Gavgilov, S.D.; Gusakov, A.D. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). 6 refs. KRB-IV. Chast' 1.

To estimate radiation safety system efficiency contribution of radioactive material railroad transformation to human population irradiation doses in transport personnel, some representatives of human population and passanges were measured. For some groups of peaple personnel dosimetry was used, for most groups radiation dosed were determined by motion-time study and by measuring ionizing radiation dose rates at peoples working positions. Collective dose equivalents for railroaders, passangers and human population from vans, trains transporting radioactive materials are comparatively low. The same may be said about transportation of spent fuel. A conclusion on safety of radioactive material transformation is drawn. 6 refs.

In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

General analytical solution of basic task of indirect dosimetry - seeking the function of I(t) radionuclide intake (in case of its arbitrary dependence on time t) is considered. general kinetic equation

for I(t) as a functional of measured V(t) excretion rate and independently found R(t) retention function is constructed. Its general solution is found and particular cases illustrating this solution are considered.

15798 (INIS-SU–231, pp. 127-129) **Indirect dosimetry of internal irradiation due to radionuclide inhalation.** Repin, V.S.; Korelina, N.F.; Likhtarev, I.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

For the case of indirect dosimetry of internal irradiation due to radionuclide inhalation an attempt is made to ground periodicity of monitoring incorporated radionuclides, characterized by ahort excretion period, on the basis of afternative estimations of internal irradiation doses, and also from the view point of putting bounds to uncertainty of dose estimations. Computations are used. It is ahown that monitoring periodicity may be chosen according to accuracy, satisfying each particular radiation situation. As an example, resultsoof THO ^{32}P, ^{35}S monitoring periodicity estimations for the cases, when criteria are either 3 time dose overestimation, or 3-fold underestimation, are presented.

15799 (INIS-SU–231, pp. 129-135) **Statistical analysis of model of aerosol deposition in lungs and standardization of radionuclide aerogenic intake.** Likhtarev, N.A.; Korelina, N.F.; Repin, V.S.; Kochetkov, O.A.; Lana, L.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

To improve dosimetry methods and means statistical analysis of some elements of Morrod model (model of aerosol deposition in human lungs) taking into account estimates of radioaerosol deposition in different sections of extraction of radioactive material from them is carried out. Attention is paid to statiatical distribution of aerosols according to their size and also to distribution of other values having an effect on the levels of particle deposition in different parts of respiratory system. Imitation of deposition levels distribution in nasopharynx, tracheobronchial and pulmonary regions and also of total deposition is carried out. variations of kinetic characteristics in the lung model are considered.

15800 (INIS-SU–231, pp. 141-148) **Estimation of waste water activity using serial radiometers.** Digtyar', V.A.; Isakov, L.M.; Prokazova, L.M.; Terekhov, O.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

Radiation monitoring of waste water actiivity including operative, element-by-element and periodic monitoring is considered. Operative estimation of waste water activity is carried out using RZhS-05 and RKB4-1eM serial radiometers. The experience of operation using the given radiometers is discussed. Device permit to cover a wide range of activities of large nuclide spectrum, and to solve the main problems of waste waters radiation monitoring.

15801 (INIS-SU–231, pp. 148-149) **Technique for determining ^{137}Csin water samples.** Antonova, V.A.; Prokof'ev, O.N. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike. 1987. 172p. (In Russian). (CONF-8412143–: 4. all-union scientific-practical conference on radiation safety, Moscow (USSR), 15 Dec 1984). In *Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR.* Order Number DE91003076. Source: OSTI; NTIS (US Sales Only); INIS.

KRB-IV. Chast' 1.

Studies on simplifying the technique of ^{137}Cs concentration from water samples on silica gel- ShSM in case of sanitary-radiation monitoring of water at NPPs and other nuclear power installations dealing with an open radioactivity are carried out. The scheme of water samples analysis includes: acidity up to pH=4, mixing with silica gel, silica gel separation, desorption of ^{137}Cs in 1H hydrochloric acid solution, radionuclide deposition on double salt of cesium and antimony and beta-radiometry of preparation in a thin layer. Optimum conditions for ^{137}Cs extraction from water samples on silica gel are ascertained.

15802 (NVR–1.3) **Nuclear safety standards: Quality guarantee main code on the safety of nuclear power plants : Adaptation of IAEA Code safety series 50-C-QA (rev. 1).** Ministry VROM-Ministry SZW Collaboration. Ministerie van Sociale Zaken, The Hague (Netherlands); Ministerie van Volkshuisvesting, Ruimtelijke Ordening en Milieubeheer, The Hague (Netherlands). 1989. 25p. Translation of: Code on the safety of nuclear power plants: quality assurance. (In Dutch). Order Number DE91624638. Source: OSTI; NTIS (US Sales Only); INIS.

Translation of: Code on the safety of nuclear power plants: quality assurance.

This document is the into Dutch translated and treated version of the IAEA 'Code on the Safety of Nuclear Power Plants: Quality Assurance'. It contains the foundations which a quality assurance programme has to meet in view of the experiences and the actual technology in order to guarantee sufficient safety. (author). 5 refs.

15803 (SIS–1990:8) **Whole-body counting 1990.** Strand, P.; Selnaes, T.D. Statens Inst. for Straalehygiene, Oslo (Norway). 1990. 18p. (In Norwegian). Order Number DE91624665. Source: OSTI; NTIS (US Sales Only); INIS.

In order to determine the doses from radiocesium in foods after the Chernobyl accident, four groups were chosen in 1987. Two groups, presumed to have a large consumption of food items with a high radiocesium content, were selected. These were Lapp reindeer breeders from central parts of Norway, and hunters a.o. from the municipality of Oeystre Slidre. Two other groups were randomly selected, one from the municipality of Sel, and one from Oslo. The persons in these two groups were presumed to have an average diet. The fall-out in Sel was fairly large (100 kBq/m^2), whereas in Oslo the fall-out level was low (2 kBq/m^2). The persons in each group were monitored once a year with whole-body counters, and in connection with these countings dietary surveys were preformed. In 1990 the Sel-group and the Lapps in central parts of Norway were followed. Average whole-body activity in each group is compared to earlier years's results, and an average yearly effective dose equivalent is computed. The Sel-group has an average whole-body activity of 2800 Bq for men, and 690 Bq for women. Compared to earlier years, there is a steady but slow decrease in whole-body activities. Yearly dose is calculated to 0.06 mSv for 1990. The Lapps in central parts of Norway have an average whole-body content of 23800 Bq for men and 13600 Bq for women. This results in an average yearly dose of 0.9 mSv for the individuals in the group. Compared to earlier years, the Lapp group show a decrease in whole-body contents since 1988. This decrease is larger among men than women. 5 refs., 8 figs., 6 tabs.

15804 (FEI–1903) **Vanadium and tantalum frequency spectrum deformation by interstitial impurities.** Danilkin, S.A.; Minaev, V.P. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (USSR). Fiziko-Ehnergeticheskij Inst.

1988. 9p. (In Russian). Order Number DE91623605. Source: OSTI; NTIS (US Sales Only); INIS.

Results of calculating metal atom oscillation spectra in disordered solid solutions vanadium-oxygen, vanadium-nitrogen and tantalum-nitrogen in virtual crystal model are presented in the work. It is shown that under nitrogen and oxygen atom implantation frequency distribution deformation takes place: atom oscillation spectrum features and boundary frequency are shifted to the region of higher frequencies by 0.5-1.0 MeV as compared to source metal spectra. The spectrum frequency mean square increases by 3-9% in the phases indicated. Calculation results qualitatively agree with the experimentally observed changes in vanadium and tantalum frequency spectra caused by implanted atoms. 11 refs.; 3 figs.; 2 tabs.

15805 (IAE–4944-1) **Anisotropy of relativistic lepton coherent scattering at axial channeling.** Telegin, V.I.; Kanloev, A.M.; Kungurov, F.R. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 5p. (In Russian). Order Number DE91623659. Source: OSTI; NTIS (US Sales Only); INIS.

The contribution of the coherent and incoherent scattering of relativistic leptons passed through thin crystals in the channeling mode to their angular distribution is considered. The investigation was carried out by numerical integration of the motion equations for a great number of particles. It is shown that in the crystals with a thickness smaller than the dechanneling length the determining role in formation of distribution over the axit angles is played by the coherent scattering of particles by atomic chains. The effect of the multiple scattering on the angular distribution is negligibly small. 6 refs.; 4 figs.

15806 (IC–90/254) **On the functional integral approach in quantum statistics. 1. Some approximations.** Dai Xianxi. International Centre for Theoretical Physics, Trieste (Italy). Aug 1990. 18p. Order Number DE91625257. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper the susceptibility of a Kondo system in a fairly wide temperature region is calculated in the first harmonic approximation in a functional integral approach. The comparison with that of the renormalization group theory shows that in this region the two results agree quite well. The expansion of the partition function with infinite independent harmonics for the Anderson model is studied. Some symmetry relations are generalized. It is a challenging problem to develop a functional integral approach including diagram analysis, mixed mode effects and some exact relations in the Anderson system proved in the functional integral approach. These topics will be discussed in the next paper. (author). 22 refs, 1 fig.

15807 (IC–90/259) **Structural instabilities in Heisenberg antiferromagnets with spin-lattice interaction.** Lagos, M.; Gottlieb, D. International Centre for Theoretical Physics, Trieste (Italy). Aug 1990. 15p. Order Number DE91625258. Source: OSTI; NTIS (US Sales Only); INIS.

The antiferromagnetic S = 1/2 Heisenberg model in one dimension with anisotropic exchange interaction depending on the lattice configuration is dealt with. The emphasis is done in the derivation fo the thermodynamic properties of the model. In addition to the smooth structural transformation starting at T = 0 reported in a previous communication, we find a new sudden transition at a finite temperature. (author). 4 refs, 3 figs.

15808 (IC–90/260) **A study on the anisotropic interaction between two substitutional magnetic impurities in a realistic metallic host.** Satter, M.A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 6p. Order Number DE91625259. Source: OSTI; NTIS (US Sales Only); INIS.

The relativistic interaction between two magnetic impurities (Fe) in paramagnetic host (Au and Cu) and magnetic anisotropic effect are studied in this article. 5 refs, 2 tabs.

15809 (IC–90/293) **Electron polarization in a quantum well with uniform electric field.** Ilaiwi, K.F.; Tomak, M. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 16p. Order Number DE91625260. Source: OSTI; NTIS (US Sales Only); INIS.

The polarization of a quantum electron confined in a one dimensional potential well in the presence of a uniform electric field is calculated numerically. It is shown that the negative polarization reported in the literature for weak fields for all excited subband states is an artifact of using infinite-barrier model. Our numerical work gives results in agreement with previous calculations for the infinite-barrier potential but it yields positive polarization for all values of the applied field for finite-barrier case. (author). 5 refs, 10 figs.

15810 (IC–90/294) **Effect of oxygen and carbon impurities on the performance of silicon single crystal solar cells.** Akhter, P. (International Centre for Theoretical Physics, Trieste (Italy)); Zakir, M.N.; Baig, A.; Ziadi, Z.I.; Ahmad, M.; Hussain, S.; Qazi, I.A.; Mufti, A. BSF solar cells are fabricated using B-doped wafers cut from Czochralski Si(100) single crystals. The effect of unintentional impurities of Oxygen and Carbon atoms on the solar cell performance parameters have been studied. The presence of carbon atoms shows an improvement in all parameters particularly the short circuit current where as oxygen shows an adverse effect. (author). 13 refs, 1 fig.

15811 (IC–90/314) **Bulk stress auto-correlation function in simple liquids-sum rules.** Tankeshwar, K. (International Centre for Theoretical Physics, Trieste (Italy)); Bhandari, R.; Pathak, K.N. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 14p. Order Number DE91625262. Source: OSTI; NTIS (US Sales Only); INIS.

Expressions for the zeroth, second and fourth frequency sum rules of the bulk stress auto correlation function have been derived. The exact expressions involve static correlation function up to four particles. Because of the non availability of any information about static quadruplet correlation function we use a low order decoupling approximation for this. In this work, we have obtained, separately, the sum rules for the different mechanism of momentum transfer in the fluids. The results are expected to be useful in the study of bulk viscosity of the fluids. (author). 9 refs.

15812 (IC–90/352) **Stability diagram of the phase-locked solitons in the parametrically driven, damped non-linear Schroedinger equation.** Barashenkov, I.V. (International Centre for Theoretical Physics, Trieste (Italy)); Bogdan, M.M.; Korobov, V.I. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 12p. Order Number DE91625263. Source: OSTI; NTIS (US Sales Only); INIS.

The problem of activation and stabilization of solitons in real systems with dissipation, is a subject of currently growing interest. In the condensed matter physics the traditional method of exciting nonlinear waves in a medium and compensating dissipative losses consists in applying a high-frequency alternating field. An effective energy transfer from the field to the medium occurs in the case of parametric pumping which the present letter is devoted to. 11 refs, 2 figs.

15813 (INIS-SU–237, pp. 56-57) **Peculiarity of anti-Stokes luminescence from $^4S_{3/2}$ level in $Y_3Al_2O_{12}$-Er^{3+} high concept rated crystals.** Zhekov, V.I. (AN SSSR, Moscow (USSR). Inst. Obshchej Fiziki); Murina, T.M.; Popov, A.V.; Prokhorov, A.M. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989. 58p. (In Russian). In *Experimental and theoretical physics: Collection.* Order Number DE91003081. Source: OSTI; NTIS (US Sales Only); INIS.

Anti-Stokes luminescence of Er^{3+} ions in $Y_3Al_5O_{12}$ crystals under excitation in electron-oscillating wings caused by absorption and irradiation of phonons ($^4I_{15/2}$-$^4I_{11/2}$) is studied. It is supposed that absorption in a long-wave spectral region is due to Er^{3+} ions present in crystal macrodefects. 8 refs.; 1 fig.

Optical properties and structure of a-Si:H films with high concentration of transition metal ion-implanted impurities are investigated. It is supposed that an irreversible decrease of edge luminescence is conditioned by the production of implanted impurity silicide precipitates. 4 refs.; 3 figs.

15816 (IS-T–1506) **Hydrogen diffusion and microstructure in undoped and boron-dope hydrogenated amorphous silicon: An IR and SIMS study.** Mitra, S. Ames Lab., IA (USA). 12 Mar 1991. 133p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-82. Order Number DE91009867. Source: OSTI; NTIS; INIS; GPO Dep.

Thesis submitted to Iowa State University.

Hydrogenated amorphous silicon (a-Si:H) prepared by rf sputtering of a polycrystalline Si target at various rf powers $50 \leq P \leq 550$ W (0.27–2.97 W/cm^2), target to substrate distance $1 \leq d \leq 2''$, and varying hydrogen partial pressures. Doping was accomplished by introducing diborane (B_2H_6) in the plasma. Hydrogen diffusion was studied from the depth profiles obtained from the SIMS on multilayered a-Si:H/a-Si:(H,D)/a-Si:H samples. The properties of the samples were characterized by IR absorption, optical gap measurements and ESR. IR yielded quantitative and qualitative information total hydrogen content and the nature of the hydrogen bonding, respectively. Hence the hydrogen microstructure of the samples could be varied in a systematic manner and monitored from the hydrogen vibrational modes. The ESR gave information on the number of paramagnetic defects per unit volume in the samples. The IR absorption of both as-deposited and annealed samples were closely monitored and the results clearly demonstrate a strong correlation between hydrogen diffusion and its microstructure. It is shown that microvoids in a-Si:H play a critical role in the process of diffusion by inducing deep hydrogen trapping sites that render them immobile. Consequently, as the microvoid density increases beyond a critical density hydrogen diffusion is totally quenched. The diffusion results are discussed both in the context of multiple trapping transport of hydrogen in an exponential distribution of trapping sites and the floating bond model.

15817 (LA-UR–91-854) **Transient thermal analysis for photothermal spectroscopy using Zeeman interferometry.** Hiller, D.B. (Washington State Univ., Pullman, WA (USA). Dept. of Mechanical and Materials Engineering); Johnston, R.G. Los Alamos National Lab., NM (USA). [1991]. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. GRANT GM38287. (CONF-9103136–2: 5. national conference on undergraduate research, Pasadena, CA (USA), 21-23 Mar 1991). Order Number DE91009948. Source: OSTI; NTIS; GPO Dep.

A new method of photothermal spectroscopy is introduced for measuring the weak absorption of light by liquids. This paper discusses the analysis for the time-varying Gaussian heating profile induced in a sample by laser heating. The advantages of this new Zeeman technique is that it is experimentally simple, yet less model dependent and at least as sensitive as competing methods. 10 refs., 5 figs.

15818 (LBL–30056) **Canonical vs. micro-canonical sampling methods in a 2D Ising model.** Kepner, J. Lawrence Berkeley Lab., CA (USA). Dec 1990. 38p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. Order Number DE91010204. Source: OSTI; NTIS; INIS; GPO Dep.

Canonical and micro-canonical Monte Carlo algorithms were implemented on a 2D Ising model. Expressions for the internal energy, U, inverse temperature, Z, and specific heat, C, are given. These quantities were calculated over a range of temperature, lattice sizes, and time steps. Both algorithms accurately simulate the Ising model. To obtain greater than three decimal accuracy from the micro-canonical method requires that the more complicated expression for Z be used. The overall difference between the algorithms is small. The physics of the problem under study should be the deciding factor in determining which algorithm to use. 13 refs., 6 figs., 2 tabs.

15819 (LBL–30057) **Possibilities for projection x-ray lithography using holographic optical elements.** Howells, M.R. (Lawrence Berkeley Lab., CA (USA)); Jacobsen, C. Lawrence Berkeley Lab., CA (USA). Dec 1990. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. (CONF-9104203–1: Soft-x-ray projection lithography topical meeting, Monterey, CA (USA), 10-12 Apr 1991). Order Number DE91009770. Source: OSTI; NTIS; GPO Dep.

Although there is a considerable literature on proximity x-ray lithography, the interest in projection x-ray techniques has arisen fairly recently, mainly due to the efforts of the AT and T group. The advantages of the projection approach seem to be the elimination of transmission masks and other problems of close proximity, the opportunity for demagnifying a mask of a coarser spatial scale, and, given a rigid, reflection mask, the possibility of cooling. The assumption behind the pursuit of these advantages is that the technical challenges of making the optical system that will perform the projection and the x-ray source that will illuminate it are tractable on some timescale. The optical fabrication tolerances and other design issues involved in carrying out projection using a conventional reflection system have been investigated by Rogers and Jewell. These authors find that the needed tolerances are well beyond the present state of the art even for spherical surfaces and the required surfaces in these schemes are aspheric. In this presentation we present an alternative approach to the process of projection which, of course, has its own, different challenges. It is a matter of one's judgment and technological starting point to decide which one of these (or other) approaches will provide the easiest path to a working x-ray projection lithography.

15820 (NIIYaF-MGU–89-15-92) **Shell potential and its application in sputtering theory.** Kuz'mina, N.M.; Kuz'min, Yu.V. Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki. 1989. 13p. (In Russian). Order Number DE91623660. Source: OSTI; NTIS (US Sales Only); INIS.

Analytical potential permitting to take into account the shell structure of atom at quasiclassical level is suggested. Using the analytical potential the spectrum of recoil atoms appearing in case of bombardment of solid bodies by fast ions has been calculated. 9 refs.; 4 figs.

15821 (OUP–90-30) **Stability and servo-control of the crystal pulling process.** Johansen, T.H. Oslo Univ. (Norway). Fysisk Inst. Nov 1990. 22p. Order Number DE91623615. Source: OSTI; NTIS (US Sales Only); INIS.

The paper analyzes why the crystal pulling process needs servo-control, and how it can be implemented. Special emphasis is put on the fundamental question of inherent stability, and how to interpret the signal from a balance when the weighing method is used for cystal diameter detection. 15 refs., 13 figs.

15822 (PINSTECH/NMD–121) **Behavior of specific heat and self diffusion coefficient of sodium near transition temperature: a molecular dynamics study.** Ahmed, N.; Khan, G. Pakistan Inst. of Nuclear Science and Technology, Islamabad (Pakistan). Nuclear Materials Div. Sep 1990. 28p. Order Number DE91623616. Source: OSTI; NTIS (US Sales Only); INIS.

4 fig.

In this report the author used of a very useful technique of simulation and applied it to successfully for determining the various properties of sodium, both in liquid and solid phase near transition point. As a first step the determination of specific heat and diffusion coefficient have been carried out. In liquid state the molecular dynamics (MD) values calculated matched the experimental data. But in solid state the diffusion coefficient obtained were not consistent with the one expected for a solid, rather the values obtained suggested that sodium remained in liquid state even below the melting point. (A.B.). 4 fig.

15823 (UCRL-JC-105920) **Analysis of electron heat transport in femtosecond laser-plasma interactions with layered solid targets and with thin foils.** Rosen, M.D. Lawrence Livermore National Lab., CA (USA). 10 Jan 1991. 21p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9010298-7: International workshop on radiative properties of hot dense matter, Sarasota, FL (USA), 22-26 Oct 1990). Order Number DE91010153. Source: OSTI; NTIS; INIS; GPO Dep.

We analyze two types of experiments that enhance our knowledge of the electron heat transport in femtosecond laser produced plasmas. The first involves layered targets and the fall off of substrate signal with increasing overlayer thickness. The experiment uncertainties are too large at present to definitively quantify the heat transport. The second involves the radiative output from thin foils. The behavior of the spectral response to foil thickness implies that our understanding of the transport within the foils is quite good. 12 refs., 11 figs.

15824 (UCRL-JC-106476) **Surface electron emission induced by slow multicharged ions.** Bardsley, J.N.; Penetrante, B.M. Lawrence Livermore National Lab., CA (USA). 1 Feb 1991. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9102102-1: Symposium on surface science, Obertraun (Austria), 10-16 Feb 1991). Order Number DE91010469. Source: OSTI; NTIS (US Sales Only); GPO Dep.

At the recent workshop on highly charged ions at Giessen, Hanspeter Winter presented a fascinating paper entitled "What ions experience on their way into a metal surface." The discussion follows the traditional approach which we will term the adiabatic quantum model (AQM). The electrons are drawn from the metal to the ion when the attractive potentials binding electrons to the solid and ionic nucleus overlap and the intervening barrier disappears. For highly charged ions this process, called resonance neutralization, transfers the electrons into orbits with very large principle quantum numbers. These weakly bound electrons then exchange energy through their Coulomb interactions, some rising into continuum states and others falling into more deeply bound levels. The rate at which this process occurs is estimated from Auger rates assuming between stationary quantum states. This is not simple, since there is little information on this process for such high quantum numbers, and very many states are involved. In this talk we will present an alternative picture (CDM) based upon elementary field emission theory and a classical description of the dynamics of the plasma formed by the emitted electrons. Since the quantum level spacings are so low and very little time is spent by each electron in a specific quantum state, we believe that the use of classical dynamics will lead to a more accurate description than could be obtained using quantum theory with current computers. Furthermore, the treatment of the simultaneous interactions between many charged particles is much simpler in classical mechanics. 23 refs., 4 figs.

In *Theoretical and applied physics: Scientific-technical collection.* Order Number DE91003077. Source: OSTI; NTIS (US Sales Only); INIS.

Recombination mechanism of high-temperature superconductivity, its advantage consisting in the possibility of the initial model Hamiltonian derivation from the first principles is presented. Only two physically justified approximations are made therewith: it is supposed that high critical temperatures are notably conditioned by anomalously small forbidden zone width in the electron spectrum of superconducting ceramics and it is believed that the recombination part of interelectron Coulomb interaction leads to Cooper pairing. It is shown that for lamellar structures the superconductivity mechanism proposed best of all explains the set of certain experimental facts. 12 refs.

15827 (LA-UR-91-893) **Valence-fluctuation scenario for cuprate superconductivity: The finite-U pairing mechanism.** Brandow, B.H. Los Alamos National Lab., NM (USA). [1991]. 9p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910145-2: Electronic structure and mechanisms for high temperature superconductivity, Coral Gables, FL (USA), 3-9 Jan 1991). Order Number DE91009953. Source: OSTI; NTIS; GPO Dep.

The ideal that the normal state of cuprate superconductors is a valence-fluctuation (VF) state is appealing for a number of reasons. We are exploring this scenario quantitatively, focussing especially on the finite-U mechanism for s-wave pairing. The calculations employ a many-body variational technique developed previously for VF and heavy-fermion materials. We are presently exploring the effects of (a) varying the Hamiltonian parameters away from the values obtained from photoemission data analysis, (b) various simple assumptions for the band structure and hybridization k-dependence, and (c) corrections and to the Gutzwiller approximation. These are the topics to be discussed in this report. 17 refs., 1 fig.

The hard core boson gas in (2+1)-dimensions in the presence of a Chern-Simons term is considered, we find that the long wave description is given in terms of Coulomb (longitudinal) and transversal electrodynamics. The longitudinal part is described in terms of electric charges which carry vorticity. When binding of electrical charges occurs the transversal part is described by a photon field and corresponds to a superfluid. Using the same language we find that a spinless fermion is described by a massive photon. We use these concepts to understand the relation between the negative-U Hubbard model in the presence of a magnetic field, and vortices which carry electric charge induced by doping in the repulsive Hubbard model. 13 refs.

15829 (LA-UR-91-1013) **Quasi-two dimensional density of states and the isotope effect in the superconducting Cu oxides.** Coffey, D.; Schwarz, R.; Yvon, P. Los Alamos National Lab., NM (USA). [1991]. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9103112-1: Conference on fermiology of high T_c superconductors, Argonne, IL (USA), 25-27 Mar 1991). Order Number DE91009969. Source: OSTI; NTIS; INIS; GPO Dep.

Tsuei et al. have pointed out that the correlation between a maximium in $T_c$and a minimum in the oxygen isotope exponent, α, observed by Crawford et al. in $La_{2-x}Sr_xCuO_4$ and by Franck et al. in $(Y_{1-x}Pr_x)Ba_2Cu_3O_7$ may be understood as a carrier density of states effect, N(E). We point out here that, if the gap equation is treated in the weak coupling approximation, an N(E) with an enhancement in a narrow range of energies which is symmetric about some energy E_s is sufficient to give the correlation. We discuss

how such as enhancement may arise from a tight-binding description of the CuO planes.

15830 (ORNL/CCIP–91/03) **The t-J model at small t/J: Numerical, perturbative, and supersymmetric results.** Barnes, T. (Oak Ridge National Lab., TN (USA). Center for Computationally Intensive Physics). Oak Ridge National Lab., TN (USA). Center for Computationally Intensive Physics. Feb 1991. 12p. Sponsored by USDOE, Washington, DC (USA); Tennessee State Government, Nashville, TN (USA). DOE Contract AC05-84OR21400 ;AS05-76ER03956. R01-1061-68. (UTK–91/01;CONF-910190–1: Workshop on electronic structures and mechanisms for high temperature superconductivity, Miami, FL (USA), 3-9 Jan 1991). Order Number DE91009921. Source: OSTI; NTIS; INIS; GPO Dep.

We discuss some recent results for one- and two-hole states in the t-J model at small t/J. These include numerical results (bandwidth determinations and accurate t/J values for 4 x 4 lattice one-hole ground-state level crossings), hopping-parameter perturbation theory (which gives the small-t/J one-hole bandwidth in terms of the static-vacancy ground state), and results at the supersymmetric point t/J = 1/2 (exact results for energies and bandwidths.) The perturbative results leads us to a new conjecture regarding the staggered magnetization of higher-spin states in the two-dimensional Heisenberg model. We also discuss extrapolation of small-t/J results to high-$T_c$parameter values; in the two-hole ground states we find $(t/J)^{\lambda}$ behavior in the rms hole-hole separation, and an extrapolation to t/J = 3 gives a bulk-limit rms hole-hole separation of ≈ 7Å. 18 refs., 6 figs.

15831 (IC–90/70) **Study of some properties of partial differential equations by Lie algebra method.** Chongdar, A.K.; Ludu, A. International Centre for Theoretical Physics, Trieste (Italy). May 1990. 9p. Order Number DE91625191. Source: OSTI; NTIS (US Sales Only); INIS.

In this note we present a system of optimal subalgebras of the Lie algebra obtained in course of investigating hypergeometric polynomial. In addition to this we have obtained some reduced equation and invariants of the P.D.E. obtained under certain transformation while studying hypergeometric polynomial by Weisner's method. Some topological properties of the solutions of P.D.E. are pointed out by using the extended jet bundle formalism. Some applications of our work on plasma physics and hydrodynamics are also cited. (author). 8 refs.

15832 (IC–90/111) **Structure of some relative relation modules of finite p-groups.** Yamin, M. International Centre for Theoretical Physics, Trieste (Italy). Jun 1990. 11p. Order Number DE91625182. Source: OSTI; NTIS (US Sales Only); INIS.

Let G be a finite p-group generated by $(g_i, 1 \leq i \leq d)$, G_i the cyclic subgroup generated by g_i, E the free product of the G_i, $1 \leq i \leq d$, and S the kernel of the natural epimorphism of E onto G. The largest elementary abelian p-quotient S-circumflex = $S/S'S^p$, regarded as an IF_pG-module via conjugation in E, is called a relative relation module of G. If d is the minimum number of generaters for G, the author has proved that S-circumflex is nonprojective and indecomposable. The aim of this paper is to give an alternative proof for the indecomposability of S-circumflex; the proof here is more informative as it deals with Loewy structure and generating sets of S-circumflex and other associated modules. (author). 9 refs.

15833 (IC–90/170) **On a class of general variational inequalities.** Siddiqi, A.H. International Centre for Theoretical Physics, Trieste (Italy). Jun 1990. 13p. Order Number DE91625183. Source: OSTI; NTIS (US Sales Only); INIS.

The study of variational inequalities was initiated by the Italian Mathematician, Guido Stampacchia in the early 60's. Besides several other important problems of Physics and Engineering this theory has been applied to solve the problem of Elasticity with unilateral constraints. In this paper we introduce a new class of variational inequalities and study the existence and uniqueness of its solution. Error estimates, convergence of approximate solution and the penalty method are also discussed. (author). 25 refs.

15834 (IC–90/225) **The chaotic environment.** Cook, A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 10p. Order Number DE91625184. Source: OSTI; NTIS (US Sales Only); INIS.

An elementary account of the origin of chaotic behaviour in classical dynamics is given with examples from geophysics, and in conclusion some thoughts about what can be predicted of chaotic behaviour and what sorts of arguments can be used to guide human behaviour in chaotic conditions are presented. 4 refs.

15835 (IC–90/249) **On the origin of inertia.** Culetu, H. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 5p. Order Number DE91625207. Source: OSTI; NTIS (US Sales Only); INIS.

A dynamical origin to the Minkowski geometry is suggested in this paper. The Minkowski internal $(-x_{\alpha}x^{\alpha})^{1/2}$ plays the role of the fifth dimension. We found the energy-momentum vector p^{μ} (associated to a "motion in scale") of a "free" relativistic particle in position-dependent. When x_l and "t" are not independent, we are naturally led to the law of inertia. (author). 10 refs.

15836 (IC–90/257) **Harmonic distributions, Diff(S^2) and Virasoro algebra.** Saidi, E.H.; Zakkari, M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 21p. Order Number DE91625185. Source: OSTI; NTIS (US Sales Only); INIS.

Harmonic distributions on the two sphere are developed and their relation with the complex plane ones is established. the basic harmonic distributions are shown to obey the Cauchy integration rules. Local Cartan tensors on S^2 are introduced. They are analytic functions satisfying a harmonic analyticity condition. Their Laurent expansion is examined and the connection with the complex plane analysis is given. Diff(S^2) and its one parameter gauge subgroups are discussed in the harmonic coordinate system. The derivation of the Virasoro algebra from the one parameter subgroups of Diff(S^2) is worked out in two special cases ($\alpha^{--}.\beta^{++} = 0$). A realization based on Cartan tensors is also given. Finally, we show that there is a 1 : 1 correspondence between the (2,0) supersymmetry on S^2 and the hypermultiplet duality of Galperin et al. (author). 19 refs.

15837 (IC–90/275) **Symmetries of the octonionic root system of E_8.** Koca, M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 32p. Order Number DE91625186. Source: OSTI; NTIS (US Sales Only); INIS.

Octonionic root system of E_8 is decomposed as the 9 sets of Hurwitz integers, each set satisfying the binary tetrahedral group structure, and the 12 sets of quaternionic units, each set obeying the dicyclic group structure of order 12. This fact is used to prove that the automorphism group of the octonionic root system of E_7 is the finite subgroup of G_2, of order 12096; an explicit 7 x 7 matrix realization of which is constructed. Possible use of the octonionic representation of the E_6 root system as orbifolds and the relevance of the binary tetrahedral structures with the statistical mechanics models are suggested. (author). 16 refs, 6 figs.

15838 (IC–90/288) **On the axially symmetric non-rotating vacuum solutions of Rosen's equations.** Bozhkov, Y. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 9p. Order Number DE91625208. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that all axially symmetric nonrotating solutions of Rosen's field equations can be expressed in terms of two harmonic functions. It is also shown that the total energy of Rosen's metric is Mc^2. (author). 8 refs.

15839 (IC–90/292) **On correlations of neuronal spike discharges.** Doguwa, S.I. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 19p. Order Number DE91625187. Source: OSTI; NTIS (US Sales Only); INIS.

To assess the dependence structure in two simultaneously occurring stationary spike trains A and B, the cross intensity function, $C_I(t)$ and the pair correlation function g(t) can be very useful. Doss (1989) provides an estimate of $C_I(t)$ at a finite number of points. However, this estimator does not take into consideration the bounded nature of the sampling interval β. Two new boundary corrected estimators are proposed. These two estimators have a

much smaller bias and mean squared error than the existing alternative. The spike discharges recorded simultaneously from a pair of auditory nerve fibres are analyzed using the new estimators. (author). 7 refs, 5 figs.

15840 (IC–90/299) **The Wess-Zumino-Witten models on N-punctured Riemann sphere.** Chang Zhe. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 14p. Order Number DE91625188. Source: OSTI; NTIS (US Sales Only); INIS.

WZW models on the N-punctured Riemann sphere S^2 are discussed. The Ward identity is derived. According to Riemann-Roch theorem, we construct a basis of meromorphic λ differentials. The expanding coefficients of the stress-energy tensor and currents are expressed by the meromorphic $\lambda = -1$ and $\lambda = 0$ differentials. Thus multi-pole Virasoro and Kac-Moody algebra are obtained. A highest-weight representation of the combined multi-pole Kac-Moody and Virasoro algebra are generated. (author). 11 refs.

15841 (IC–90/301) **Variational problems with obstacles and harmonic maps.** Musina, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1990. 11p. Order Number DE91625189. Source: OSTI; NTIS (US Sales Only); INIS.

Our first purpose is to find a generalization of the usual definition of a harmonic map between two Riemannian manifolds in order to consider less regular target spaces. Our second aim was to extend a result by Chen and Struwe about the heat flow of harmonic mappings into manifolds with boundary. 19 refs.

15842 (IC–90/307) **Is the Hawking wormhole responsible for the Rindler particles?.** Culetu, H. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 8p. Order Number DE91625209. Source: OSTI; NTIS (US Sales Only); INIS.

It is assumed that an inertial observer perceives the Minkowski spacetime as if it were full of Hawking wormholes. The spacetime becomes static to an hyperbolic observer. It is shown that the Ricci tensor has sharp variations near the horizons. The properties of the corresponding stress tensor are analyzed. (author). 10 refs, 2 figs.

15843 (IC–90/312) **Quantum gravitational corrections to the functional Schroedinger equation.** Kiefer, C. (Zurich Univ. (Switzerland). Inst. fuer Theoretische Physik); Singh, T.P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 18p. Order Number DE91625192. Source: OSTI; NTIS (US Sales Only); INIS.

We derive corrections to the Schroedinger equation which arise from the quantization of the gravitational field. This is achieved through an expansion of the full functional Wheeler-DeWitt equation with respect to powers of the Planck mass. We demonstrate that the corrections terms are independent of the factor ordering which is chosen for the gravitational kinetic term. Although the corrections are numerically extremely tiny, we show how they lead, at least in principle, to shift in the spectral lines of hydrogen type atoms. We discuss the significance of these corrections for quantum field theory near the Planck scale. (author). 35 refs.

15844 (IC–90/313) **Relativistic dynamical reduction models and nonlocality.** Ghirardi, G.C. (International Centre for Theoretical Physics, Trieste (Italy)); Grassi, R.; Pearle, P. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 16p. Order Number DE91625193. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss some features of continuous dynamical models yielding state vector reduction and we briefly sketch some recent attempts to get a relativistic generalization of them. Within the relativistic context we analyze in detail the local an nonlocal features of the reduction mechanism and we investigate critically the possibility of attributing objective properties to individual systems in the micro and macroscopic cases. At the nonrelativistic level, two physically equivalent versions of continuous reduction mechanisms have been presented. However, only one of them can be taken as a starting point for the above considered relativistic generalization. By resorting to counterfactual arguments we show that the reason for this lies in the fact that the stochasticity involved in the two approaches has different conceptual implications. (author). 7 refs, 4 figs.

15845 (IC–90/315) **Electric moments induced by a (time periodic) current density.** Radescu, E.E. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 8p. Order Number DE91625194. Source: OSTI; NTIS (US Sales Only); INIS.

The frequency (ω) dependent nondiagonal (electric-toroid) dipole polarizability $g(\omega)$ of a (nonrelativistic, spinless, ground-state) hydrogenlike atom, which yields the strength of the (time periodic) electric dipole moment induced in the atom by an external conduction or displacement (time periodic) current density, is calculated exactly in terms of a Gauss hypergeometric function. Although $g(\omega = 0) = 0$, the derivative $g'(\omega = 0) = -19a_0^5/6Z^6$ (a_0 = Bohr radius, Z = charge number) is responsible for a certain part of the low energy elastic scattering of light on the atom. (author). 8 refs.

15846 (IC–90/319) **Toroid polarizabilities and the elastic scattering of photons by atomic hydrogen.** Radescu, E.E. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 8p. Order Number DE91625195. Source: OSTI; NTIS (US Sales Only); INIS.

In the framework of an exactly soluble case, that of a (nonrelativistic, spinless, ground-state) hydrogenlike atom, it is shown in a way unbiased by approximations that alongside with the usual (dipole and quadrupole) electric polarizabilities, and Langevin-type (dipole and quadrupole) magnetic polarizabilities, two other polarizabilities of a new type, called "toroid" (already introduced in previous work) are required in order to correctly establish the low energy behaviour of the Rayleigh amplitude to the fourth order in the photon's frequency. A longstanding puzzle in the understanding of the interconnection between quantum mechanical functions (polarizabilities) and the amplitude for the elastic scattering of photons by atoms is thereby, in principle, finally removed. (author). 8 refs.

15847 (IC–90/334) **Physical meaning of the optical reference geometry.** Abramowicz, M.A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1990. 11p. Order Number DE91625210. Source: OSTI; NTIS (US Sales Only); INIS.

I show that contrary to a popular misconception the optical reference geometry, introduced a few years ago as a formally possible metric of a 3-space corresponding to a static spacetime, is quite satisfactory also from the physical point of view. The optical reference geometry has a clear physical meaning, as it may be constructed experimentally by measuring light round travel time between static observers. Distances and directions in the optical reference geometry are more strongly connected to experiment than distances and directions in the widely used directly projected metric (discussed e.g. in Landau and Lifshitz textbook.) In addition, the optical reference geometry is more natural and convenient than the directly projected one in application to dynamics. In the optical geometry dynamical behaviour of matter is described by concepts and formulae identical to those well known in Newtonian dynamics on a given two dimensional (curved) surface. (author). 22 refs.

15848 (IC–90/341) **Optimization and resolution of Lourie's equations.** Nguyen Cang (Universite de Ho Chi Minh Ville, Ho Chi Minh Ville (Viet Nam). Dept. de Mathematiques); Nguyen Kim Tan. International Centre for Theoretical Physics, Trieste (Italy). Oct 1990. 11p. (In French). Order Number DE91625190. Source: OSTI; NTIS (US Sales Only); INIS.

Assuming that the optimal control of the system considered by Popov is established, it is demonstrated that the Lourie equations are soluble. 4 refs.

15849 (IFVE-OTF–89-118) **The underlying principles of relativistic theory of gravitation.** Logunov, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 11p. Order Number DE91623492. Source: OSTI; NTIS (US Sales Only); INIS.

The paper deals with the main statements of relativistic theory of gravitation, constructed in result of critical analysis of the general theory of relativity. The principle of geometrization is formulated.

15850 (IFVE-OTF–89-142) **Gravitational collapse of dust in the relativistic theory of gravity.** Chugreev, Yu.V. (Moskovskij Gosudarstvennyj Univ., Moscow (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 35p. (In Russian). Order Number DE91623493. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the journal EhChaYa.

It is shown, that gravitational collapse in the relativistic theory of gravity with nonzero rest mass of gravitation principally differs from that one in massless theory. Near the Schwarzschild horizon the collapsing dust sphere reboundas. 13 refs.; 2 figs.

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 22p. (In Russian). Order Number DE91623494. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the journal Teor. Mat. Fiz.

In the frameworks of relativistic theory of gravitation with nonzero graviton rest mass theory of gravitational wave radiation is built with the source being embeded in infinite and oscillating Friedmann Universe. If the source has a nonzero quadrupole moment intensity of radiation is described by usual quadrupole formula, otherwise (spherically symmetric case) the intensity is strongly suppressed but positive. 10 refs.

15852 (IFVE-OTF–89-193) **New examples of continuum graded Lie algebras.** Savel'ev, M.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij); Vershik, A.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (USSR). Inst. Fiziki Vysokikh Ehnergij. 1989. 16p. Order Number DE91623480. Source: OSTI; NTIS (US Sales Only); INIS.

Several new examples of continuum graded Lie algebras which provide an additional elucidation of these algebras are given. Here, in particular, the Kac-Moody algebras, the algebra S_0 Diff T^2 of infinitesimal area-preserving diffeomorphisms of the torus T^2, the Fairlie, Fletcher and Zachos sine-algebras, etc., are described as special cases of the cross product Lie algebras. 8 refs.

15853 (ITEP–133-89) **Interaction of gravity and matter in the framework of N=4 supersymmetry.** Terent'ev, M.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 8p. Order Number DE91623495. Source: OSTI; NTIS (US Sales Only); INIS.

Procedure of constructing interaction of gravitation with only one non-Abelian matter multiplet is described. Compactification of 10-dimensional space R_D(D=10) to R_4 space in the framework of N=1 supergravity theory was used. 14 refs.

15854 (ITEP–148-89) **On the concept of universal W-algebra.** Morozov, A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 21p. Order Number DE91623481. Source: OSTI; NTIS (US Sales Only); INIS.

Ordinary quadratic W_N-algebras are in fact particular subsets of naturally closed algebras of Casimir-like operators TrJ^n, formed from generators J of Sl(N) Kac-Moody algebra. These subsets arise after Hamiltonian reduction and some additional less universal restrictions, specifying non-reducible closed subalgebra and ignored in the text. In the limit of $N=\infty$ a structure of linear Lie algebra is restored and a new object arises, naturally interpreted as universal W-algebra. 14 refs.

15855 (ITEP–163-89) **Once more about the topologically massive gauge theory.** Kogan, Ya.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 23p. Order Number DE91623482. Source: OSTI; NTIS (US Sales Only); INIS.

The general properties of the three-dimensional gauge theory with the topological mass is discussed namely the long-range interaction of the Aharonov-Bohm type. It is argued that Chern-Simons gauge theories must be considered as the infrared limit of the topologically massive theories. The analogy between the Landau problem of a charged particle in a magnetic field and quantization of this gauge theory is considered, as well as the quantization condition for the Abelian Chern-Simons term. 38 refs.; 5 figs.

15856 (IYaF–89-93) **Theory of diffusion photoeffect in hydrogen atom. Part 4,5: 4. ionization of a three-dimensional atom in a monochromatic field. 5. Diffusion excitation in two- and three-frequency field.** Shepelyanskij, D.L. AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki. 1989. 68p. (In Russian). Order Number DE91625196. Source: OSTI; NTIS (US Sales Only); INIS.

Excitation of hydrogen atom in linearly and elliptical polarized fields is considered. It is shown that excitation localization in a two-dimensional hydrogen atom model is the same, as in the one-dimensional case. In this case strong excitation inside the shell does not affect energy localization due to Coulomb degeneration. The conclusion is made that the effect of quantum localization of dynamic chaos can be observed in the laboratory experiment. 26 refs.; 23 figs.

15857 (JINR-R–2-89-533) **Phase space structure in gauge theories.** Shabanov, S.V. Joint Inst. for Nuclear Research, Dubna (USSR). 1989. 88p. (In Russian). Order Number DE91623483. Source: OSTI; NTIS (US Sales Only); INIS.

The lectures are devoted to the new aspect of dynamical systems with gauge groups, the phase space reduction of physical degrees of freedom. The physical phase space structure in many models with a gauge symmetry and with commuting and anticommuting variables, including Yang-Mills fields and Glashow-Weinberg-Salam model, is studied. Some physical consequences of the phase space reduction are discussed. 51 refs.; 15 figs.; 1 tab.

15858 (LA-UR–91-226) **The statistical properties of electromagnetic fields with application to radiation and scattering.** Lehman, T.H. (Lehman (T.H.), Albuquerque, NM (USA)); Miller, E.K. Los Alamos National Lab., NM (USA). [1991]. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9106118–1: 1991 Institute of Electrical and Electronics Engineers (IEEE) AP-S symposium, Ontario (Canada), 24-28 Jun 1991). Order Number DE91007467. Source: OSTI; NTIS; INIS; GPO Dep.

Determining the relationships between different average values is an important step in any physics-based statistical theory. If these relationships exist and exhibit certain properties, then probability densities or distributions can be assigned to the field variables and the transition from an "average-value theory" to a "statistical theory" is complete. For electromagnetics, no such average-value relationships have been demonstrated to exist. The derivation of these relationships and their range of validity are the subject of consideration here. For purposes of this discussion, we limit our attention to the fields inside a complex cavity, but with the ultimate goal of deriving the statistics of the far radiated and scattered fields of complex envelopes.

15859 (NBI-HE–90-71) **Is there a minimum length in D=4 lattice quantum gravity?.** Greensite, J. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 12p. Contract DE-AC03-81ER400009. Order Number DE91623496. Source: OSTI; NTIS (US Sales Only); INIS.

It is argued that, as in string theory, a minimum length exists in D=4 quantum gravity. The argument is based on a (naive) lattice regularization of tetrad gravity, where it appears that any formal reduction of the lattice spacing $\epsilon=\chi_{n+1}-\chi_n$ is countered by an increase in metric fluctuations. In D=4 dimensions, these fluctuations prevent the average physical separation between neighboring lattice points from falling below a certain minimum, which is on the order of the Planck length. (orig.).

Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 16p. Order Number DE91623497. Source: OSTI; NTIS (US Sales Only); INIS.

We consider a discrete model of Euclidean quantum gravity in three dimensions based on a summation over random simplicial manifolds. We derive some elementary properties of the model and discuss possible 'matrix' models for 3d gravity. (orig.).

15861 (NBI-HE–90-76) **2D gravity, random surfaces and all that.** Ambjoern, J. Niels Bohr Inst., Copenhagen (Denmark). Nov 1990. 19p. (CONF-901072–: LATTICE '90: 7th international lattice gauge theory conference, Tallahassee, FL (USA), 8-12 Oct 1990).

Order Number DE91623498. Source: OSTI; NTIS (US Sales Only); INIS.

I review the recent progress in 2d gravity and discuss the new numerical simulations for 2d gravity and for random surfaces in d>2. The random surface theories of interest in d>2 have extrinsic curvature terms, and for a finite value of the extrinsic curvature coupling there seems to be a second order phase transition where the string tension scales. (orig.).

15862 (NIKHEF-H-91-03) **Ashtekar formalism with real variables.** Kalau, W. (University of Wuppertal (Federal Republic of Germany). Physics Department). Nationaal Inst. voor Kernfysica en Hoge-Energiefysica (NIKHEF), Amsterdam (Netherlands). Sectie H. Dec 1990. 14p. Order Number DE91625211. Source: OSTI; NTIS (US Sales Only); INIS.

A new approach to canonical gravity is presented which is based on the Ashtekar formalism. But, in contrast to Ashtekar's variables, this formulation does not need complex quantities nor does it lead to second class constraints. This is achieved using SO(3,1) as a gauge group instead of complexified SO(3). Because of the larger group additional first class constraints are needed which turn out to be cubic and quartic in the momenta. (author). 13 refs.

15863 (DOE/ER-0493T) **Computing for magnetic fusion energy research: The next five years: A report of the Fusion Computing Council for the Magnetic Fusion Energy Research Community.** Mann, L. (Los Alamos National Lab., NM (USA)); Glasser, A.; Sauthoff, N. (eds.). USDOE Office of Energy Research, Washington, DC (USA). Office of Fusion Energy. 8 Feb 1991. 44p. Sponsored by USDOE, Washington, DC (USA). Order Number DE91010686. Source: OSTI; NTIS; INIS; GPO Dep.

This report considers computing needs in magnetic fusion for the next five years. It is the result of two and a half years of effort by representatives of all aspects of the magnetic fusion community. The report also factors in the results of a survey that was distributed to the laboratories and universities that support fusion. There are four areas of computing support discussed: theory, experiment, engineering, and systems.

15865 (AEA-FUS-33) **The effects of radial transport on current drive in tokamaks.** O'Brien, M.R.; Cox, M.; McKenzie, J.S. AEA Fusion, Culham (UK). [1990]. 14p. Order Number DE91625286. Source: OSTI; NTIS (US Sales Only); INIS.

The influence of radial transport of electrons on radiofrequency and Ohmic current drive in tokamaks is discussed. It is found that such processes can reduce the efficiency of current drive in tokamaks in which the energy confinement time is comparable with or less than the collision time of the heated electrons, and that even if this is not the case they significantly broaden the driven current profile. (author).

15866 (AEA-FUS-75) **The Braginskii fluid stability of reversed field pinches.** Cox, P.M. AEA Fusion, Culham (UK). [1990]. 45p. Order Number DE91625287. Source: OSTI; NTIS (US Sales Only); INIS.

Numerical results are presented concerning the linear stability of the current and future generations of RFP's (reversed field pinches). Resistive MHD (magnetohydrodynamics) indicates that finite beta RFP equilibria are unstable to resistive-g modes, and therefore indicates that these may be responsible for confinement degradation. However, as RFP's become more collisionless, terms that are neglected in resistive MHD become significant and should be included in any stability analysis. In this paper, a linear initial value-code has been used to examine the effect of additional terms in the Braginskii equations on the stability of a tearing mode stable equilibrium. In order to make contact with analytical work the additional physics is introduced term by term. The Hall terms alone are shown to stabilise resistive-g modes, but also to destabilise a variant of the eta_i-mode. When electron thermal conductivities are also included the eta_i-mode remains largely unaffected but the resistive-g mode is no longer stabilised, instead it evolves into a drift-tearing mode that is driven by the electron temperature gradient. Thus in the cold ion limit there are two identifiable branches of instability. The growth-rate of the drift tearing mode is slowed by finite Larmor radius effects, but both it and the eta_i-mode remain unstable throughout the collisional ion regime for which the fluid equations are valid. (author).

15867 (AEA-FUS-76) **Solution of three dimensional Fokker-Planck equations for tokamak plasmas using an operator splitting technique.** McKenzie, J.S.; O'Brien, M.R.; Cox, M. AEA Fusion, Culham (UK). [1990]. 23p. Order Number DE91625329. Source: OSTI; NTIS (US Sales Only); INIS.

A two-stage operator splitting algorithm has been used to time advance the three dimensional Fokker-Planck equation for the electron distribution function in a tokamak. In the first stage, derivatives in two of the dimensions are advanced together implicitly. Derivatives in the remaining dimension are advanced in the second stage. This algorithm gives accurate solutions in modest CPU times unlike alternative schemes considered. We describe the technique which includes features that accommodate the internal boundary conditions arising from trapped electron effects. (author).

15868 (AEA-FUS-77) **Toroidal effects on the non-linearly saturated m = 1 island in tokamaks.** Avinash, K.; Haas, F.A.; Thyagaraja, A. AEA Fusion, Culham (UK). [1990]. 8p. Order Number DE91625330. Source: OSTI; NTIS (US Sales Only); INIS.

This paper investigates the influence of toroidal effects (due to the coupling of various poloidal harmonics) on the non-linear saturation of the m=1 island. Bounds are obtained relating the aspect ratio, the shear at the q=1 surface and the saturated island width. Provided these bounds are satisfied, then we find that the cylindrical m=1 island theory is valid for toroidal geometry. (author).

From 13. conference on the numerical simulation of plasmas; Santa Fe, NM (USA); 17-20 Sep 1989. Order Number DE91009834. Source: OSTI; NTIS; INIS; GPO Dep.

We are using the multi-scale technique to model bounded systems. Certain bounded systems are a naturally suited for the multi-scale method because of the boundary layer that forms at the wall, which is usually a short spatial and time scale structure, can

significantly affect the bulk plasma behavior. One goal is to understand the interaction between the bulk plasma and the sheath. If the relevant short time scale physics is local to a few known spatial regions, then one can take advantage of this by advancing particles with variable Δt depending on position, hence reducing computing time. The unmagnetized sheath problem is such a case. The model is a one dimensional bounded slab with kinetic ions and electrons. We start with a collisionless and unmagnetized system for simplicity. The right boundary is a conducting wall that absorbs all particles that come in contact with it. The left boundary is a symmetry point, where the particles are reflected. We allow a specified initial distribution: $f(x,v,t = 0)$. In order to test the numerics of both multi-scale method and boundary conditions we are using the following test problem: a cutoff Maxwellian distribution for the electrons and fixed ions. The system has an analytic solution, so the run may be started from equilibrium. This gives us a benchmark and tests the fast time scale electron sheath dynamics. Results using variable Δt will be given. In the future, we intend to use the more general model to study time dependent bounded plasma problems, such as a plasma expanding toward a conducting wall.

15872 (CONF-890931–15) **A particle-in-cell method for modeling small angle Coulomb collisions in plasmas.** Parker, S.E. California Univ., Berkeley, CA (USA). Electronics Research Lab. [1989]. 4p. Sponsored by Department of Defense, Washington, DC (USA); USDOE, Washington, DC (USA). DOE Contract FG03-90ER54079 ;FG03-86ER53220. N00014-85-K-0809. From 13. conference on the numerical simulation of plasmas; Santa Fe, NM (USA); 17-20 Sep 1989. Order Number DE91009830. Source: OSTI; NTIS; INIS; GPO Dep.

We propose a computational method to self-consistently model small angle collisional effects. This method may be added to standard Particle-In-Cell (PIC) plasma simulations to include collisions, or as an alternative to solving the Fokker-Planck (FP) equation using finite difference methods. The distribution function is represented by a large number of particles. The particle velocities change due to the drag force, and the diffusion in velocity is represented by a random process. This is similar to previous Monte-Carlo methods except we calculate the drag force and diffusion tensor self- consistently. The particles are weighted to a grid in velocity space and associated "Poisson equations" are solved for the Rosenbluth potentials. The motivation is to avoid the very time consuming method of Coulomb scattering pair by pair. First the approximation for small angle Coulomb collisions is discussed. Next, the FP-PIC collision method is outlined. Then we show a test of the particle advance modeling an electron beam scattering off a fixed ion background. 4 refs.

15873 (CONF-910609–1) **Biasing experiments on the ATF torsatron.** Uckan, T. (Oak Ridge National Lab., TN (USA)); Baylor, L.R.; Bigelow, T.; England, A.C.; Harris, J.H.; Isler, R.C.; Jernigan, T.C.; Lyon, J.F.; Mioduszewski, P.K.; Murakami, M.; Rasmussen, D.A.; Wilgen, J.B.; Wing, W.R.; Aceto, S.C.; Zielinski, J.J.; Bell,Oak Ridge National Lab., TN (USA). [1991]. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From 18. European conference on controlled fusion and plasma physics; Berlin (Germany, F.R.); 3-7 Jun 1991. Order Number DE91010145. Source: OSTI; NTIS; INIS; GPO Dep.

Recent biasing experiments on tokamaks have been very successful in improving the global particle (H-mode-like) confinement resulting from the setup of an outward-pointing radial electric field at the edge. These experiments have been extended to the current-free Advanced Toroidal Facility (ATF), and initial biasing experiments have been carried out in electron-cyclotron-heated (ECH) plasmas. ATF has a torsatron configuration with $\ell = 2$, 12 field periods ($M = 12$), a major radius $R_0 = 2.1$ m, and an average plasma radius $a = 0.27$ m. The current-free magnetic configuration of ATF that is produced by external means has moderate shear; the rotational transform ($\chi = 1/q$, where q is the safety factor) at the last closed flux surface (LCFS) is $\chi \approx 1$, which is about a factor of 3 higher than the central value. ECH plasmas are created at a magnetic field $B = 0.95$ T using a 53-GHz gyrotron source with heating power up to $P \sim 400$ kW. In these ECH plasmas, a representative line-averaged plasma density is $\bar{n}_e \sim 5 \times 10^{12}$ cm^{-3}, and the plasma stored energy $W_p \approx 2$ kJ. A pair of rail limiters, which are normally floating, one at the top and one at the bottom of the device, are biased at positive and negative potentials with respect to the vessel. 7 refs., 5 figs.

15874 (CONF-910609–2) **Ion confinement and radiation losses in the Advanced Toroidal Facility.** Isler, R.C. (Oak Ridge National Lab., TN (USA)); Colchin, R.J.; Wade, M.R.; Lyon, J.F.; Fowler, R.H.; Rome, J.A.; Hiroe, S.; Baylor, L.R.; England, A.; Ma, C.H.; Rasmussen, D.A.; Ochando, M.; Paul, S. Oak Ridge National Lab., TN (USA). [1991]. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From 18. European conference on controlled fusion and plasma physics; Berlin (Germany, F.R.); 3-7 Jun 1991. Order Number DE91010382. Source: OSTI; NTIS; INIS; GPO Dep.

Collapses of stored energy are typically observed in low-density ($\bar{n}_e \approx 10^{13}$ cm^{-3}) extensively gettered ATF plasmas when the electron density rises to the ECH cutoff point, and the central heating is supplied only by neutral- beam-injection (NBI). However, the decline of stored energy can be avoided if the density is raised rapidly to about 5×10^{13} cm^{-3}. Three mechanisms have been proposed to explain the collapses: (1) impurity radiation, (2) excitation of an electron instability driven by the neutral beams, or (3) poor coupling of the beam ions to the thermal plasmas. Detailed spectroscopic studies of plasma cleanliness as a function of the gettering procedure have shown that radiation is an unlikely candidate for initiating collapses, although it may become an important loss mechanism once the electron temperature has fallen to a low level. No specific electron instability has yet been identified with injection, but recent experimental and computational work indicates that losses by shinethrough and charge exchange strongly influence the evolution of low-density plasmas. This report discusses the beam particle losses, thermal ions, and the evolution of radiation profiles.

15875 (CONF-910609–3) **Heavy ion beam probe measurements of ECH method plasma in the Advanced Toroidal Facility.** Aceto, S.C. A Heavy Ion Beam Probe (HIBP) has been installed on the Advanced Toroidal Facility (ATF) and used to measure the plasma potential and also make density fluctuation measurements during ECH plasmas. The initial results of the potential profile measurements are presented and related to spectroscopic rotation measurements using simple momentum balance equations. Also, a summary of the density fluctuation measurements made to date is given along with a brief comparison with similar HIBP measurements made on the TEXT tokamak. 6 refs., 3 figs.

15876 (CONF-910609–4) **ICRF heating on the burning plasma experiment (BPX).** Batchelor, D.B. (Oak Ridge National Lab., TN (USA)); Carter, M.D.; Goulding, R.H.; Hoffman, D.J.; Jaeger, E.F.; Ryan, P.M.; Swain, D.W.; Tolliver, J.S.; Yugo, J.J.; Goldston, R.J.; Hosea, J.C.; Kaye, S.M.; Phillips, C.K.; Wilson, J.R.; Scharer, J.E.; Mau,.Oak Ridge National Lab., TN (USA). Jun 1991. Order Number DE91010390. Source: OSTI; NTIS; INIS; GPO Dep.

RF power in the ion cyclotron range of frequencies (ICRF) has been chosen as the primary heating technique for BPX. This decision is based on the wide success of ICRF heating in existing experiments (JET, TFTR, JT-60), the capability of ion cyclotron waves to penetrate the high-density plasmas of BPX, the ability to concentrate ICRF power deposition near the plasma center, and the ready availability of high-power sources at the appropriate frequency. The primary task of the ICRF system is to heat the plasma to ignition. However, other important roles are envisaged; these include the stabilization of sawteeth, preheating of the plasma during current ramp-up, and possible control of the plasma current profile by means of fast-wave current drive. We give a brief overview of the RF system, describe the operating scenarios planned for BPX, and discuss some of the antenna design issues for BPX. 4 refs., 3 figs.

15877 (DOE/ER/53198–169) **q-Dependence of magnetic turbulence in a tokamak.** Prager, S.C.; Dexter, R.N.; Graessle, D.E. Wisconsin Univ., Madison, WI (USA). Dept. of Physics. Jan 1991. 53p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-85ER53198. Order Number DE91009679. Source: OSTI; NTIS; INIS; GPO Dep.

Low-frequency radial magnetic field turbulence has been measured over the full minor radius for discharges in the Tokapole 2 tokamak, and scaled over the range of edge safety factor $0.6 \leq q_a \leq 5.0$. It was found that q_a served as a control parameter for both the magnetic fluctuation amplitude and the global confinement time. As q_a is reduced from 5 to 0.6 the turbulence level increases by a factor of fifty while the confinement time decreases by more than a factor of ten. At $q_a \leq 1$, the full fluctuation amplitude is roughly large enough to account for the global confinement using simple estimates of collisionless stochastic magnetic transport. At high q_a, the turbulence is too small to account for transport using these estimates. Frequency spectra have been obtained from 10 to 400 kHz. For all q_a most of the fluctuation power appears below 100 kHz. This low-frequency structure changes as the safety factor is varied. Although broadband in frequency, the long radial coherence lengths at these frequencies indicate global modes. For $f \geq$ 100 kHz, the spectra become featureless, with a power-law frequency decay. Radial, poloidal, and parallel correlation analysis has been done as well. The parallel correlation length is estimated to be 150 ± 10 cm. Radial and poloidal coherence lengths are of the order of the machine dimensions for frequencies below 100 kHz for all q_a. Poloidal mode number spectral information is obtained from two-point phase shift measurements, radial decay of fluctuations beyond the separatrix, and poloidal coherence measurements. The m-spectrum broadens as q_a decreases. This might explain the increase in fluctuation amplitudes as q_a decreases. It is suggested that the turbulence for all discharges is due to the same underlying cause or set of causes, and that the differences result from geometric effects associated with the variation in q_a.

15878 (DOE/ER/53223–158) **Hall effects on anomalous heat, particle and helicity transports through tearing-mode turbulence.** Yoshida, Z.; Strauss, H.R.; Hameiri, E. New York Univ., NY (USA). Courant Inst. of Mathematical Sciences. Jan 1991. 17p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-86ER53223. (MF–122). Order Number DE91010730. Source: OSTI; NTIS; INIS; GPO Dep.

The helicity transport in a current-carrying plasma results in heat and particle transports in the direction opposite to the helicity flux. Tearing-mode turbulence produces helicity flux that is proportional to the gradient of equilibrium parallel current. The helicity flux is a consequence of a fluctuating electric field with a circularly polarized component, which also causes a nonlinear parallel current (primarily an electron flux) and a nonlinear polarization current (primarily an ion flux). Such anomalous heat and particle fluxes are driven by the free-energy associated with the perturbed magnetic field in the tearing-mode turbulence, and are typically directed inward to the plasma. Both fluxes becomes large when the gradient of the equilibrium current is large. 12 refs.

15879 (DOE/ER/53266–30) **On standard forms for transport equations and fluxes: Part 2.** Ross, D.W. Texas Univ., Austin, TX (USA). Fusion Research Center. Mar 1990. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-88ER53266. (FRCR–357). Order Number DE91010421. Source: OSTI; NTIS; INIS; GPO Dep.

Quasilinear expressions for anomalous particle and energy fluxes arising from electrostatic plasma turbulence in a tokamak are reviewed yet again. Further clarifications are made, and the position taken in a previous report is modified. There, the total energy flux, Q_j, and the conductive heat flux, q_j, were correctly defined, and the anomalous Q_j was correctly calculated. It was shown that the anomalous energy transport can be correctly described by $\nabla \cdot Q^*_j$, where $Q^*_j = 3/5\ Q_j$, with all remaining source terms such as $\{\tilde{p}_j \nabla \cdot \tilde{V}j\}$ cancelling. Here, a revised discussion is given of the identification of the anomalous conductive flux, q_j, in which the distinction between Q_j and Q^*_j is reconsidered. It is shown that there is more than one consistent way to define q_j. Transport calculations involving only theoretical electrostatic turbulent fluxes are unaffected by these distinctions since Q_j or Q^*_j, rather than q_j, is the quantity naturally calculated in the theory. However, an ambiguity remains in experimental transport analysis if the measured particle flux $\Gamma_j = n_j V_j$ is to be used in the energy equation. This is because we cannot be sure how properly to treat the source terms $p_j \nabla \cdot V_j$ or $\{\tilde{p}_j \nabla \cdot \tilde{V}_j\}$. 17 refs.

15880 (DOE/ER/53266–31) **Dispersion relations of density fluctuations observed by heavy ion beam probe in the TEXT tokamak.** Ross, D.W. (Texas Univ., Austin, TX (USA). Fusion Research Center); Schoch, P.M.; Heard, J.W.; Crowley, T.P.; Hickok, R.L. Texas Univ., Austin, TX (USA). Fusion Research Center. Sep 1990. 36p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-88ER53266 ;FG05-88ER53267. (FRCR–358). Order Number DE91010422. Source: OSTI; NTIS; INIS; GPO Dep.

Wave numbers as functions of frequency for density fluctuations in the core of the TEXT tokamak are measured in Heavy Ion Beam Probe experiments by analyzing the relative phases of signals originating from nearby points in the plasma. The adjacent points are typically 2 cm apart, with their relative orientation (δr, $\delta\theta$) depending on position (r,θ). for angular frequencies $\omega \leq 10^6$/s the signals are quite coherent, leading to reasonably well-defined "dispersion relations." These do not correspond to known modes of the drift wave type, i.e., ballooning or slab-like electron drift waves or ion temperature gradient modes. The effect of finite sample volume size does not significantly alter this conclusion. 25 refs., 6 figs., 3 tabs.

15881 (DOE/ER/53266–35) **Effect of beam-attenuation modulation on fluctuation measurements by heavy-ion beam probe.** Ross, D.W. (Texas Univ., Austin, TX (USA). Fusion Research Center); Sloan, M.L.; Wootton, A.J.; Schoch, P.M.; Heard, J.W.; Crowley, T.P. Hickok, R.L.; Simcic, V. Texas Univ., Austin, TX (USA). Fusion Research Center. Mar 1991. 33p. Sponsored by USDOE, Washington, DC (USA); Texas Atomic Energy Research Foundation, Dallas, TX (USA). DOE Contract FG05-88ER53266 ;FG05-88ER53267. (FRCR–380). Order Number DE91010423. Source: OSTI; NTIS; INIS; GPO Dep.

Beam-attenuation modulation arising from density fluctuations along the orbit of the heavy-ion beam probe can distort the local amplitude, coherence, and phase derived from one- and two-point correlation measurements. Path-integral expressions for these effects are derived and applications to TEXT data are discussed. The effects depend critically on the ratio of the average fluctuation amplitude, $\tilde{n}_e$, along the beam path to the local $\tilde{n}_e$ at the sample volume. Because the fluctuation amplitude is small in the core and rises sharply toward the plasma edge, the contamination effect is negligible in a radial zone near the edge but rises sharply to the interior of a critical radius. With increasing average plasma density, $\tilde{n}_e$, the interior contamination increases strongly and the critical radius moves outward. 16 refs., 12 figs.

15882 (DOE/ER/53266–36) **Comparison of drift wave models with fluctuation data from the interior of the TEXT tokamak.** Ross, D.W. (Texas Univ., Austin, TX (USA). Fusion Research Center); Bravenec, R.V.; Ritz, C.P.; Sloan, M.L.; Thompson, J.R.; Wootton, A.J.; Schoch, P.M.; Heard, J.W.; Crowley, T.P.; Hickok, R.L.; Simcic, V.; Brower, D.L.; Peebles, W.A.; Luhmann, N.C. Jr. Texas Univ., Austin, TX (USA). Fusion Research Center; California

Univ., Los Angeles, CA (USA). Dec 1990. 30p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-88ER53266 ;FG05-88ER53267 ;FG03-86ER53225. (FRCR–381). Order Number DE91010424. Source: OSTI; NTIS; INIS; GPO Dep.

Experimental evidence for and against drift waves as the origin of the observed fluctuations and anomalous transport in the plasma interior is reviewed. Fluctuation spectra observed by far-infrared scattering and a heavy ion beam probe (HIBP) are compared. The FIR system observes broad $S(k,\omega)$, which are spatially resolved at large k and readily identified with electron drift waves. At higher densities a clear feature, which may be associated with ion temperature gradient modes, appears as well. A quasi-coherent feature in the drift wave range of phase velocities is also found at the inner mid-plane. But interior HIBP measurements using a thallium beam have, by a two-point correlation method, measured wave numbers far too small to be those of drift waves of either variety. Some recent measurements with a cesium beam have produced phase velocities more closely in accord with drift waves at low frequencies. It is suggested that a new mode may be present, which is not drift waves at low frequencies. It is suggested that a new mode may be present, which is not drift wave-like. However, the phase velocity and coherence of the HIBP data exhibit qualitative features that suggest possible instrumental effects. Several of these are investigated, which individually do not appear to reconcile the data with a pure drift wave model. They are sample volume size, common mode effects such as cross talk or path integrals of beam attenuation, and two-stream instabilities. Reconciliation of these measurements is important to transport studies. That is, calculated particle and energy fluxes depend sensitively on the frequency and wave number spectrum employed. The theoretical considerations about two-point correlations and possible instrumental effects are also relevant to other diagnostics using this technique.

15883 (DOE/ER/53298–2) **[Magnetofluid transport]: Progress report.** Dartmouth Coll., Hanover, NH (USA). 1991. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-89ER53298. Order Number DE91010261. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of this activity is to understand the limiting factors in the containment and heating of a toroidally confined magnetofluid, seen as a model for a tokamak plasma, or to a lesser extent, for a toroidal pinch. Three main pieces of progress are: detailed predictions for realistic plasma numbers, of the helical, convective states to be expected in tokamaks driven at currents above the thresholds for the instability of the zero-flow axisymmetric profile with spatially uniform transport coefficients; numerical study of tokamak equilibrium with Braginskii transport coefficients and an energy equation; and determination of the characteristics of helically-deformed, convection-cell, plasma states by numerical methods.

15884 (DOE/ER/53300–1) **Theory of incremental turbulent transport in tokamaks: Progress report.** Similon, P.L. Yale Univ., New Haven, CT (USA). 15 Jul 1991. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-89ER53300. Order Number DE91010264. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of this research is to understand how the various aspect of turbulent transport operate in tokamaks, in the presence of low frequency fluctuations such as drift waves or trapped electron modes.

This report contains papers on the following topics: fusion theory and computations; theory of thermonuclear plasmas; user service center; high poloidal beta studies on PBX-M; fast ECE fluctuation diagnostic for ballooning mode studies; x-ray imaging diagnostic; millimeter/submillimeter-wave fusion ion diagnostics; small scale turbulence and nonlinear dynamics in plasmas – continuation proposal; plasma turbulence and transport; and phase contrast interferometer diagnostic for long wavelength fluctuations in DIII-D.

15886 (DOE/ET/51013–291) **Axisymmetric control in tokamaks.** Humphreys, D.A. Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center. Feb 1991. 256p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-78ET51013. (PFC/RR–91-4). Order Number DE91009794. Source: OSTI; NTIS; INIS; GPO Dep.

Vertically elongated tokamak plasmas are intrinsically susceptible to vertical axisymmetric instabilities as a result of the quadrupole field which must be applied to produce the elongation. The present work analyzes the axisymmetric control necessary to stabilize elongated equilibria, with special application to the Alcator C-MOD tokamak. A rigid current-conserving filamentary plasma model is applied to Alcator C-MOD stability analysis, and limitations of the model are addressed. A more physically accurate nonrigid plasma model is developed using a perturbed equilibrium approach to estimate linearized plasma response to conductor current variations. This model includes novel flux conservation and vacuum vessel stabilization effects. It is found that the nonrigid model predicts significantly higher growth rates than predicted by the rigid model applied to the same equilibria. The nonrigid model is then applied to active control system design. Multivariable pole placement techniques are used to determine performance optimized control laws. Formalisms are developed for implementing and improving nominal feedback laws using the C-MOD digital-analog hybrid control system architecture. A proportional-derivative output observer which does not require solution of the nonlinear Ricatti equation is developed to help accomplish this implementation. The nonrigid flux conserving perturbed equilibrium plasma model indicates that equilibria with separatrix elongation of at least $\kappa_{sep} = 1.85$ can be stabilized robustly with the present control architecture and conductor/sensor configuration.

15887 (DOE/ET/53088–481) **On broken ballooning symmetry.** Zhang, Y.Z.; Mahajan, S.M. Texas Univ., Austin, TX (USA). Inst. for Fusion Studies. Mar 1991. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG05-80ET53088. (IFSR–481). Order Number DE91010878. Source: OSTI; NTIS; INIS; GPO Dep.

A 2-D ballooning transform is devised to investigate ballooning symmetry breaking effects. It is found that there are stringent limitations on the use of 1-D eigenmode equations to describe plasma stability. 2 refs., 1 fig.

This report discusses research in the following areas: applied plasma physics overview; fusion plasma theory; fusion user service center; and diagnostics.

15889 (GA-A–20363) **Fusion technology development: Annual report, October 1, 1989–September 30, 1990.** General Atomics, San Diego, CA (USA). Mar 1991. 30p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-89ER52153. Order Number DE91010697. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses development and technology overview of plasma technologies and fusion technologies. In particular, this report discusses research on: RF technologies; plasma facing components; reactor design studies; and fusion nuclear technology.

15890 (GA-C–20285) **An edge density fluctuation diagnostic for DIII-D using lithium beams: Technical progress report, [March 15, 1990–August 15, 1990].** Thomas, D.M. General Atomics, San Diego, CA (USA). Oct 1990. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG03-90ER54081. Order Number DE91009814. Source: OSTI; NTIS; INIS; GPO Dep.

This report covers the research conducted under US Department of Energy Grant No. DE-FG02-90ER54081 during the period 3/15/90 through 8/15/90. Highlights include the procurement of the highly stabilized beam energy power supply, and the acquisition of relevant high speed lithium fluorescence data from the edge region of both limiter (TEXT) and divertor (ASDEX) tokamak plasmas. We have also presented a paper at the Hyannis Plasma Diagnostics Conference (to be published in Review of Scientific Instruments)

which covers the planned diagnostic system. The work on this project may be naturally organized according to the following six sub-areas: Ion source/beam system, neutralizer system, optical system, data acquisition, data analysis, and machine (DIII-D) interface. Progress in each of these areas will be discussed briefly.

15891 (INIS-mf–12798) **Electron density fluctuation measurements in the TORTUR tokamak.** Remkes, G.J.J. Rijksuniversiteit Utrecht (Netherlands). 6 Jun 1990 155p. Order Number DE91623712. Source: OSTI; NTIS (US Sales Only); INIS.

Includes summary and introduction in Dutch.

This thesis deals with measurements of electron-density fluctuations in the TORTUR tokamak. These measurements are carried out by making use of collective scattering of electromagnetic beams. The choice of the wavelength of the probing beam used in collective scattering experiments has important consequences. in this thesis it is argued that the best choice for a wavelength lies in the region 0.1–1 mm. Because sources in this region were not disposable a 2 mm collective scattering apparatus has been used as a fair compromise. The scattering theory, somewhat adapted to the specific TORTUR situation, is discussed in Ch. 2. Large scattering angles are admitted in scattering experiments with 2 mm probing beams. This had consequences for the spatial response functions. Special attention has been paid to the wave number resolution. Expressions for the minimum source power have been determined for two detection techniques. The design and implementation of the scattering apparatus has been described in Ch. 3. The available location of the scattering volume and values of the scattering angle have been determined. The effect of beam deflection due to refraction effects is evaluated. The electronic system is introduced. Ch. 4 presents the results of measurements of density fluctuations in the TORTUR tokamak in the frequency range 1 kHz to 100 MHz end the wave number region 400–4000 m^{-1} in different regions of the plasma. Correlation between density and magnetic fluctuations has been found in a number of cases. During the current decay at the termination of several plasma discharges minor disruptions occurred. The fluctuations during these disruptions have been monitored. Measurements have been performed in hydrogen as well as deuterium. A possible dependence of the wave number on the ion gyroradius has been investigated. The isotropy of the fluctuations in the poloidal plane was investigated. A theoretical discussion of the measured results is given in ch. 5.

15892 (INIS-SU–238/A) **Plasma physics: Collection.** Kratkie soobshcheniya po fizike. AN SSSR, Moscow (USSR). Fizicheskij Inst. 1989 56p. (In Russian). Order Number DE91003082. Source: OSTI; NTIS (US Sales Only); INIS.

Individual papers in this collection are indexed.

15893 (INIS-SU–240, pp. 3-17) **Start-up of the T-15 tokamak.** Al'khimovich, V.A. (and others); Akhtyrskij, S.V.; Babaev, I.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Consideration is given to main results of performing start-up of the T-15 tokamak: arrangement and tests of electromagnetic system; cryostat pumping-out to 10^{-5} Tor and discharge chamber - to 10^{-6} Tor; cooling of cryoresistive objects down to 80-100K and superconducting winding of toroidal field (SWTF)-down to 10-20K; attainment of superconducting SWTF state; break-down and plasma production with ≈ 120kA currents, ≈ $3x10^{-18}m^3$ concentration and ≈ 0.1S duration. 9 refs.; 10 figs.; 3 tabs.

15894 (INIS-SU–240, pp. 40-45) **Stable pinches for controlled fusion.** Chernov, A.A. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Consideration is given to some physical aspects of using 'stable' pinch for controlled fusion and as the neutron source. The approximate life-time of such pinch is equal to 100 MHD-times and is determined by development of m=1 helical mode or by small-scale instabilities of transverse current, leading to abnormal energy release for pinch lifetime. It is shown that neutron yield depends mainly on stabilizing mechanism and is maximal at optimally chosen initial pinch parameters. Existence of 'stable' pinch during 100 MHD-times enables to consider plants of plasma focus type as a powerfull neutron source. 28 refs., 1 fig.

15895 (INIS-SU–240, pp. 58-59) **Target plasma source with a gap shape of the discharge channel for the AMBAL-Yu device.** Dimov, G.I.; Kaabantsev, A.A.; Taskaev, S.Yu. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Plasma source with a gap shape of discharge channel has been developed to improve parameters of target plasma in the open AMBAL-Yu magnetic gap. Dimensions of plasma jet in initial cross section - 24x126mm along the axes, peak density - up to $10^{15}cm^{-3}$ temperature - 10-20 eV. Increase of magnetic field in the source enabled to decrease β several times in plasma jet as compared to jets of ring plasma guns. This produced a positive effect on its stability with respect to bulb disturbances in the regions of transporting field with unfavourable curvature. This enabled to improve sufficiently the target plasma parameters in the middle plane of AMBAL-Yu trap along with closer location of gap plasma gun to magnetic plug. 3 refs.; 3 figs.

15896 (INIS-SU–240, pp. 27-36) **Some problems of plasma diagnostics for experimental fusion reactor.** Orlinskij, D.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Main difficulties which occur when designing diagnostic complex of experimental tokamak reactor are considered. The complex is disignated for performing the cycle of physical plasma investigations with sufficient α-particle contribution to energy balance, as well as for application as transducers of reactor control sustem at production stage of its operation. 26 refs.; 6 figs.; 2 tabs.

15897 (INIS-SU–240, pp. 37-39) **Nuclear-physics diagnostics of ion temperature in hot deuterium plasma.** Kamal', M.; Kukulin, V.I.; Voronchev, V.T. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Nuclear-physical method for determining ion temperature of hot deuterium-containing plasma is suggested. The method is based on ^6Li ion addition into deuterium plasma and corresponding measurements of γ-quanti yield in the following reactions: $^6Li(d,n)^7Be^* \rightarrow Be+\gamma$ (E_γ=431 keV) and $^6Li(d,p)^7Li^* \rightarrow ^7Li+\gamma$($E_\gamma$=478 keV). The extrapolation procedure was used to calculate cross-sections of mentioned reactions at E<100 keV and to determine low-temperature rates of $<\sigma>$ reactions. The obtained data enabled to evaluate the yield of monochromatic γ-quanti in plants with magnetic plasma containment. Principle possibility of determining (or evaluating) function of ion distribution with respect to rates was considered. 14 refs.; 1 fig.; 2 tabs.

15898 (INIS-SU–240, pp. 65-68) **Influence of motion nonadiabaticity on particle kinetics in cusped magnetic trap.** Poletaev, D.L. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Detailed numerical simulation of motion of charged particle ensemble in the model field of axisymmetric casp was conducted. Effect of motion nonadiabaticity on ensemble parameters was investigated. It is shown that particle diffusion with respect to pitch-angle in velocity space can be described analytically in the region of weak nonadiabaticity. Boundaries of the region of strong nonadiabaticity, where particle ensemble becomes isotropic, and particle containment is determined by gas-dynamic flow through casp plugs, were established. Statement of the problem of plasma kinetics in casped magnetic trap was considered on the basis of such analysis. 9 refs.; 3 figs.

15899 (INIS-SU-240, pp. 69-72) **Electron transverse transport in a multigap electromagnetic trap with axisymmetric magnetic field.** Germanova, S.V.; Lavrent'ev, O.A.; Petrenko, V.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Calculation of electron transverse transport in multigap electron trap of axisymmetric magnetic field has been performed. The equations of classical diffusion and electron mobility were used. This calculation has been made by computational methods for a real structure of 'Yupiter-2M' experimental device magnetic fields. 8 refs.; 5 figs.

15900 (INIS-SU-240, pp. 60-64) **Plasma oscillations and their influence on the ion beam dynamics in the injector of a thermonuclear reactor.** Sidorov, V.P.; Udovichenko, S.Yu. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Low-frequency volume plasma oscillations, excited by negative ion beam and deteriorating its transport through the neutralizer gas medium in the injector of thermonuclear reactor, were investigated. It is concluded that, negative ion beam is more active source of excitation of plasma oscillations which can deteriorate its transport through the gas neutralizer medium in the injector of thermonuclear reactor. Excitation of high-frequency surface oscillations in plasma, diffusing in a proper ambipolar electric field through the ion beam boundary, is considered. It is shown that Miller force, occurring in result of particle motion averaging in rapidly oscillating field of surface oscillations, will affect firstly the electrons; deviation of positive plasma ions to the periphery and fast negative ions - to injector axis will take place. 12 refs.

15901 (INIS-SU-241, pp. 65-71) **Ray refraction in a fully-ionized axisymmetrical plasma.** Abzaev, F.M. Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1988. 86p. (In Russian). In *Techniques and computer codes for numerical solution of mathematical physics problems: Scientific-technical collection.* Order Number DE91003080. Source: OSTI; NTIS (US Sales Only); INIS.

Analytical and numerical methods are used to obtain the approximate formulas for ray refraction angle when passing through plasma with exponential dip of density profile. In the region of small values of the refraction angle its dependence on electron density in the point of ray turn is described by exponential function with index, close to one, and the value is inversely proportional to the square of frequency of incident radiation. 6 refs.; 5 figs.; 2 tabs.

15902 (IPF-89-1) **Numerical calculation of the voltage profile and the bias-voltages in plasma reactors with HF-discharges.** Deutsch, R.; Erz, U.; Herold, H.; Raeuchle, E. Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung. Apr 1989. 61p. (In German). Order Number DE91764560. Source: OSTI; NTIS (US Sales Only); INIS.

Investigation of plasma-wall interaction is important, since the boundary layer fields determine the ion energy and thus the processes of deposition or sputtering. Electric currents between plasma and wall cause strong fields in the boundary layer, which accelerate relative slow ions and generate sputtering processes. The authors derive from the microscopical boundary-layer theory the current-voltage characteristic of the boundary layer and the capacity as an analytical function of the layer voltage and solve a system of nonlinear differential equations, describing the current-voltage relations in the whole circuit and also the fields in the boundary layer. The numerical solution of these equations is the goal of this publication. Starting from the traditional Langumir theory the system of differential equations is formulated for a plasma reactor model and solved for different external voltage signals. Nonlinear oscillations of voltage and current occur in the system. Resonance processes are important for the intensity of the produced fields. The currents and voltages at the two boundary layers are coupled to each other and to the capacitive, resistive and inductive elements and together determine the dependence of the fields on external parameters (i.e. electrode cross sections, signal frequency, signal amplitude etc.). The used theory does not take care of stationary magnetic fields which may be present. (AH).

15903 (IPP-1/254) **Investigation of magnetic modes in the ASDEX tokamak.** Zohm, H. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Heidelberg Univ. (Germany, F.R.). Fakultaet fuer Physik und Astronomie. Oct 1990. 110p. (In German). Order Number DE91764558. Source: OSTI; NTIS (US Sales Only); INIS.

Properties of MHD-modes in the ASDEX Tokamak have been investigated by application and further development of the MIRNOV-diagnostics, i.e. measurement of magnetic field fluctuations. In addition to evaluation methods supported by models, also a model-independent statistical data analysis makes sense. The very important physics of mode locking, i.e. the slowing-down of rotating modes is examined. An elaborated theoretical model allows an interpretation of experimental results. Especially interesting is the loss of the angular momentum of rotating plasmas by mode locking. Experiments for mode stabilisation and prevention of electric current breakdown are discussed. Additional MHD-processes under different plasma conditions are treated on the fundament of the devloped model ideas. The author shows that the main tokamak plasma is described very well by one-dimensional models with cylindrical geometry, while the boundary zone of the plasma demands a more complex analysis. In the appendix a concept for the investigation of the MHD-activity in ASDEX-Upgrade is discussed. (AH).

15904 (IPP-5/33) **Evolution of high-density particle clouds in magnetically confined plasmas.** Zavala Guzman, G. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Michigan Univ., Ann Arbor, MI (USA). Dept. of Nuclear Engineering. Dec 1989. 65p. Order Number DE91764701. Source: OSTI; NTIS (US Sales Only); INIS.

The subject of this study is the spatial and time evolution of initially low-temperature high-density particle clouds in magnetically confined hot plasmas, such as those produced by ablating cryogenic hydrogen pellets in fusion machines. Particular attention is given to such physical processes as heating of the cloud by the energy fluxes carried by incident plasma particles (classical flux-limited energy transport by thermal electrons along the magnetic field lines, anomalous heat conduction across them), gasdynamic expansion with j vectorxB vector-produced deceleration in the transverse direction, finite-rate ionization and recombination (collisional and radiative) processes, and magnetic field convection and diffusion. The Lagrangian approximation used allows one to take into account all relevant physical processes that affect the radial expansion and deceleration of the cloud particles, including the change of the magnetic field topology. The results show the existence of a distinct structure in the ablatant cloud surrounding an ablating pellet: A hollow temperature profile coupled to a peaked density profile in the plane normal to the magnetic field direction. The lifetime of this structure is measured on hydrodynamic time scales. The basic properties of the cloud, such as its radial extent, average temperature, bulk density, etc., are complex functions of the pellet ablation rate, the parameters of the background plasma, and the magnetic field strength applied. Simple analytical or ad hoc description of this functionality, as done in present ablation models, does not seem to be possible. (orig.).

15905 (IPP-III/160) **Investigation of transport-relevant fluctuations in the plasma boundary of ASDEX.** Rudyj, A. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik. Jul 1990. 124p. (In German). Order Number DE91764559. Source: OSTI; NTIS (US Sales Only); INIS.

After the discussion of plasma diagnostics the local radial particle flux in the plasma edge is described, followed by a treatment of the density and potential fluctuations in the boundary zone. A statistical analysis determines the correlation lengths of the observed fluctuations in directions poloidal, radial and parallel to the magnetic field. Power density spectra and coherent spectra lead to

better understanding of the fluctuations. The asymmetry of the fluctuation amplitude between high and low field side of the torus has been observed in a tokamak for the first time. Furtheron the dependence of the fluctuation properties on global plasma parameters is examined, together with the extremely high flucutations' correlation along the magnetic field lines. The response of the fluctuations to additional heating by neutral beam injection is elaborated, especially in the H-mode of better plasma confinement. ASDEX fluctuations are compared with such of other machines, followed by a survey of the manifold instabilities and their properties. The appendix discusses the divertor tokamak ASDEX and the applied statistical methods. (AH).

15906 (ITEF–171-89) **Ionization recombination and emissivity coefficients of optically thin dense plasma.** Gerusov, A.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Teoreticheskoj i Ehksperimental'noj Fiziki. 1989. 32p. (In Russian). Order Number DE91623725. Source: OSTI; NTIS (US Sales Only); INIS.

The simple approximate method for calculation of ionization equilibrium and emissivity of optically thin dense plasma consisting from ions with K, L, M, N atomic shells is considered. The structure of energy levels has chosen in the following manner: all levels with $\Delta n=0$ is grouped in basic state and levels with $\Delta n>=1$ is described in hydrogen like approximation. The equation system for levels populations includes collisional ionization and three-body recombination, collisional excitation and deexcitation radiative and dielectronic recombination, radiative spontaneous decay. Ionization and recombination coefficients of plasma are derived in quasisteady state approximation. Numerical analysis of ionization, recombination and emissivity coefficients for Cu in range 40 eV $\leq T_e \leq$ 40 keV, $10^{16} \leq Ne \leq 10^{24} cm^{-3}$ is carried out. 12 refs.; 8 figs.

15907 (JET-R–90-05) **Feasibility study of bulk ion temperature measurements on JET by means of collective scattering of gyrotron radiation.** Orsitto, F. (ENEA, Frascati (Italy). Centro Ricerche Energia). Commission of the European Communities, Abingdon (UK). JET Joint Undertaking. Oct 1990. 42p. Contract JE8/9011. Order Number DE91623716. Source: OSTI; NTIS (US Sales Only); INIS.

In the proposal for a Thomson scattering diagnostic for fast ions and alpha particles in the JET tokamak, using a gyrotron (λ_o=0.214 cm), the possibility of measuring the plasma ion temperature was considered in general. In this report we discuss the possibility of measuring the bulk ion feature in detail, because the proposed diagnostic could give detailed information on the ion dynamics through the measurement of the spatial ion temperature profile, possibly resolved in time. (author).

15908 (KFTI–89-3) **Collective interaction of monoenergetic relativistic high-energy electron beams with plasma.** Berezin, A.K.; Kiselev, V.A.; Onishchenko, I.N.; Fajnberg, Ya.B. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 16p. (In Russian). Order Number DE91623756. Source: OSTI; NTIS (US Sales Only); INIS.

Results of experimental and theoretical investigations of interactions of modulated relativistic electron beams (REB) with plasma and monoenergetic REB with dense plasma are presented. Coherent energy losses of modulated relativistic beam and excitation of collective oscillations in plasma by the beam conditioned by Vavilov-Cherenkov effect are revealed. It is shown that efficiency of interaction of monoenergetic REB with low angular divergence with plasma doesn't decrease as plasma density grows. 27 refs.; 8 figs.

15909 (KFTI–89-9) **Numerical solution of dispersion equation for two-stream ion-ion instability.** D'yakov, V.E.; Ol'shanskij, V.V.; Panchenko, V.I. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Algorithm for numerical solution of nonlinear transcendental dispersion equation used for study of potential oscillations in homogenous plasma is described. The description of program realization of this algorithm for the BESM-6 computer is presented. 4 refs.; 1 fig.

15910 (KFTI–89-10) **Numerical analysis of dispersion equation for electrostatic oscillations of ion-ion plasma in strong magnetic field: Part 2.** D'yakov, V.E.; Ol'shanskij, V.V.; Panchenko, V.I. AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst. 1989. 10p. (In Russian). Order Number DE91623737. Source: OSTI; NTIS (US Sales Only); INIS.

Consideration is given to results of numerical investigation of the linear stage of ion-ion instability of plasma located in strong homogeneous and stationary magnetic field conditioned by relative movement of ion components transverse to magnetic field. Dependences of critical relative velocity of ion components increment of oscillation, growth and dimensions of instability region in wave number space in wide ranges of changes of parameters, namely the ratios of temperatures for two types of ions T_{01}/T_{02} and their concentrations n_1/n_2 are presented (T_{01}/T_{02}=0.1-10, n_1/n_2=0.1-10). 5 refs.; 8 figs.

15911 (ORNL/TM–11545) **ATF edge plasma turbulence studies using a fast reciprocating Langmuir probe.** Uckan, T. (Oak Ridge National Lab., TN (USA)); Hidalgo, C.; Bell, J.D.; Harris, J.H.; Dunlap, J.L.; Dyer, G.R.; Mioduszewski, P.K.; Wilgen, J.B.; Ritz, C.P.; Wootton, A.J.; Rhodes, T.L.; Carter, K. Oak Ridge National Lab., TN (USA). Jan 1991. 16p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010487. Source: OSTI; NTIS; INIS; GPO Dep.

Electrostatic turbulence on the edge of the Advanced Toroidal Facility (ATF) torsatron is investigated experimentally with a fast reciprocating Langmuir probe (FRLP) array. Initial measurements of plasma electron density n_e and temperature T_e and fluctuations in density ($\tilde{n}_e$) and plasma floating potential ($\tilde{\phi}_f$) are made in electron cyclotron heated plasmas at 1 T. At the last closed flux surface (LCFS, $r_{\surd}/a \sim 1$), $T_e \approx$ 20–40 eV and $n_e \approx 10^{12}$ cm^{-3} for a line-averaged electron density $\bar{n}_e$ = (3–6) x 10^{12} cm^{-3}. Relative fluctuation levels, as the FRLP is moved into core plasma where $T_e >$ 20 eV, are $\tilde{n}_e/n_e \approx$ 5% and $e\tilde{\phi}_f/T_e \approx 2\tilde{n}_e/n_e$ about 2 cm inside the LCFS. The observed fluctuation spectra are broadband (40–300 kHz) with $\bar{k}\rho_s \leq 0.1$, where $\bar{k}$ is the wavenumber of the fluctuations and ρ_s is the ion Larmor radius at the sound speed. The propagation direction of the fluctuations reverses to the electron diamagnetic direction around $r_{\surd}/a < 1$. The phase velocity and the electron drift velocity are comparable ($v_{ph} \sim v_{de}$). The fluctuation-induced particle flux is comparable to fluxes estimated from the particle balance using the H_α spectroscopic measurements. Many of the features seen in these experiments resemble the features of ohmically heated plasmas in the Texas Experimental Tokamak (TEXT). 18 refs., 10 figs.

15912 (ORNL/TM–11701) **Mercier stability and transport properties of the URAGAN-2M and ATF torsatrons.** Dominguez, N. (Martin Marietta Energy Systems, Inc., Oak Ridge, TN (USA). Computing and Telecommunications Div.); Carreras, B.A.; Lynch, V.E.; Tolliver, J.S.; Bykov, V.E.; Grekov, D.L.; Shishkin, A.A. Oak Ridge National Lab., TN (USA). Feb 1991. 30p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010488. Source: OSTI; NTIS; INIS; GPO Dep.

The equilibrium, Mercier stability, and neoclassical transport (in the $1/\nu$ regime) properties of two $\ell = 2$ torsatrons, the Advanced Toroidal Facility (ATF) and URAGAN-2M, are compared. ATF and URAGAN-2M have 12 and 4 field periods, respectively. The two torsatrons have similar arrays of coils. Dipole and quadrupole magnetic fields can be used to improve transport at zero beta, but increasing beta tends to undo the optimization. 18 refs., 19 figs., 2 tabs.

15913 (ORNL/TM–11756) **Transport analysis of stellarator reactors.** Painter, S.L. (Tennessee Univ., Knoxville, TN (USA). Dept. of Nuclear Engineering); Lyon, J.F. Oak Ridge National Lab., TN (USA). Feb 1991. 47p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010489. Source: OSTI; NTIS; INIS; GPO Dep.

The performance of deuterium-tritium stellarator reactors is studied with a new, fast one-dimensional (1-D) transport survey code that is based on the spectral collocation method. Two operating modes with different signs of the assumed radial electric field are

identified. The operating mode with a positive electric field is characterized by high temperatures and moderate densities, whereas the other mode has lower temperatures and higher densities. Both modes lead to possible reactors that could tolerate a large alpha-particle energy loss. The sensitivity to device parameters and to profile assumptions is examined. Scaling expressions useful for parametric studies are obtained for different quantities of interest, and the 1-D code results are compared with results derived from an empirical scaling relation. Deuterium-helium-3 (D-^{3}He) operation is also feasible but is more demanding. The implications for stellarator reactor design optimization are discussed. 47 refs., 16 figs., 1 tab.

15914 (ORNL/TM–11758) **Inversion of chordal data from the ATF torsatron.** Baylor, L.R.; Ma, C.H.; Hiroe, S. Oak Ridge National Lab., TN (USA). Feb 1991. 21p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010490. Source: OSTI; NTIS; INIS; GPO Dep.

A method to obtain electron density profiles from chordal interferometric measurements of a tokamak plasma has been extended to the non-axisymmetric stellarator geometry of the Advanced Toroidal Facility (ATF) torsatron. The method requires a known magnetic flux surface geometry expressed in spectral form. The method has been applied to both interferometer density data and bolometer irradiance data from ATF, and results are presented. The resulting inverted density profiles are integrated along a horizontal path and compare favorably with line integral measurements of the density. Sensitivities of the resulting profiles to variations in the flux surface geometry and errors in the measurements are discussed.

15915 (OUP–90-33) **Electron collision frequency in microwave exposed plasma.** Mentzoni, M. Oslo Univ. (Norway). Fysisk Inst. Dec 1990. 19p. Order Number DE91623717. Source: OSTI; NTIS (US Sales Only); INIS.

In many situations of electromagnetic wave propagation through plasma, the problem of nonlinearity arises. This is particularly important in the context of microwave diagnostics, which in many cases aims at measuring the characteristics of an undisturbed plasma. The present paper deals analytically with the problem on nonlinearity, particularly from the point of view of microwave plasma diagnostics. 3 refs., 6 figs.

15916 (PPPL–2736) **Effect of surface modes on coupling to fast waves in the LHRF.** Pinsker, R.I.; Colestock, P.L. Princeton Univ., NJ (USA). Plasma Physics Lab. 16 Sep 1990. 37p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91010042. Source: OSTI; NTIS; INIS; GPO Dep.

The effect of surface modes of propagation on coupling to fast waves in the LHRF is studied theoretically and experimentally. The previously reported 'up-down' poloidal phasing asymmetry for coupling to a uniform plasma is shown to be due to the properties of a mode which carries energy along the plasma-conducting wall interface. Comparison of the theory with coupling experiments performed on the PLT tokamak with a phased array of twelve dielectric-loaded waveguides at 800 MHz shows that the observed dependence of the net reflection coefficient on toroidal phase angle can be explained only if the surface wave is taken into account. 43 refs., 10 figs.

15917 (PPPL–2737) **The computation of resistive MHD instabilities in axisymmetric toroidal plasmas.** Harley, T.R.; Cheng, C.Z.; Jardin, S.C. Princeton Univ., NJ (USA). Plasma Physics Lab. Mar 1991. 66p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91010725. Source: OSTI; NTIS; INIS; GPO Dep.

We describe the linear MHD eigenmode code NOVA-R, which calculates the resistive stability of axisymmetric toroidal equilibria. A formulation has been adopted which accurately resolves the continuum spectrum of the ideal MHD operator. The resistive MHD stability equations are transformed into three coupled second order equations, one of which recovers the equation solved by the NOVA code in the ideal limit. The eigenfunctions are represented by a Fourier expansion and cubic B-spline finite elements which are packed about the internal boundary layer. Accurate results are presented for dimensionless resistivities as low as 10^{-30} in cylindrical geometry. For axisymmetric toroidal plasmas we demonstrate the accuracy of the NOVA-R code by recovering ideal results in the $\eta \rightarrow 0$ limit, and cylindrical resistive interchange results in the $a/R \rightarrow$ limit. Δ' analysis performed using the eigenfunctions computed by the NOVA-R code agree with the asymptotic matching results from the resistive PEST code for zero beta equilibria. 33 refs., 30 figs.

15918 (PPPL–2738) **ICRF sawtooth stabilization: Application on TFTR and CIT.** Hosea, J.C. (Princeton Univ., NJ (USA). Plasma Physics Lab.); Phillips, C.K.; Stevens, J.E.; Wilson, J.R.; Bell, M.; Boivin, R.; Cavallo, A.; Colestock, P.; Fredrickson, E.; Hammett, G.; Hsuan, H.; Janos, A.; Jassby, D.; Jobes, F.; McGuire, K.; Mueller, D.Princeton Univ., NJ (USA). Plasma Physics Lab. Mar 1991. 33p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91010043. Source: OSTI; NTIS; INIS; GPO Dep.

The use of ICRF heating to stabilize the core plasma sawtooth relaxations has been extended to TFTR where such stabilization has been produced at relatively low power in the L Mode regime at moderate density (P_{RF} = 4 MW, 2.6 MW in helium and deuterium discharges, respectively, for the minority hydrogen ICRF heating regime with $\bar{n}_e \approx 2.5 \times 10^{13}$ cm^{-3}). These results, as in the case of those obtained on JET, are qualitatively consistent with energetic ion stabilization of the m = 1, n = 1 ideal/resistive kink mode. The relevance of sawtooth stabilization to the primary regimes of interest on TFTR – the high-Q supershot regime and the high density pellet injection regimes – and on CIT – the high density ICRF heated regime – is considered in the context of the present theory and the projected ICRF power deposition characteristics. 35 refs., 11 figs.

15919 (PPPL–2740) **Excitation of toroidal Alfven eigenmodes in TFTR.** Wong, K.L.; Fonck, R.J.; Paul, S.F.; Roberts, D.R.; Fredrickson, E.D.; Nazikian, R.; Park, H.K.; Strachan, J.D.; Bell, M.; Bretz, N.L.; Budny, R.; Cohen, S.; Hammett, G.W.; Jobes, F.C.; Meade, D.M.; Medley, S.S.; Mueller, D.; Nagayama, Y.; Owens, D.K.; SynPrinceton Univ., NJ (USA). Plasma Physics Lab. Mar 1991. 16p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03073. Order Number DE91011007. Source: OSTI; NTIS; INIS; GPO Dep.

Deuterium neutral beams with energies up to 110 keV were injected into TFTR (Tokamak Fusion Test Reactor) plasmas at low magnetic field such that the beam injection velocities were comparable to the Alfven velocity. Excitation of toroidal Alfven eigenmodes was observed by Mirnov coils and beam emission spectroscopy. 10 refs., 4 figs.

15920 (RAL–90-082) **Thermal effects in relativistic plasmas.** Castaldo, C. (Naples Univ. (Italy). Dept. of Physical Sciences); Fedele, R.; Angelis, U. de; Bingham, R. Rutherford Appleton Lab., Chilton (UK). Nov 1990. 9p. Order Number DE91623704. Source: OSTI; NTIS (US Sales Only); INIS.

A kinetic approach is used for a description of a plasma in the presence of a large amplitude wave (ie relativistic electrons). The case of a "small" momentum spread around an average momentum is considered and corrections to the cold plasma case (zero spread) are given. (author).

The US design for the ITER tritium-breeding blanket consists of layers of Be multiplier, stainless steel cladding, and Li_2O ceramic breeder. Tritium is recovered from the ceramic breeder by purging it with He + 0.2% H_2. Models have been developed to describe the purge-flow thermal-hydraulics and gas reactions and the tritium retention/release due to lattice diffusion, desorption/adsorption, solubility/precipitation, and percolation through interconnected

porosity. These have been incorporated into the steady-state code TIARA for the purpose of performing design calculations for Tritium Inventory and Release Analysis. Transient calculations for pulsed operation are done with a modified version of the DISPL code. The results of both steady-state and transient analyses for tritium retention and releases are given for anticipated ITER operating conditions. 13 refs., 6 figs., 3 tabs.

This volume of the LLE Review, covering the period October–December 1990, contains descriptions of a new phase-conversion technique designed to improve irradiation uniformity, a report on the interpretation of high-density implosion experiments of argon-filled targets, and an article on the use of absorption spectroscopy to diagnose compressed target layers. The section on advanced technology has a report on the application of KTP crystals as electro-optic amplitude modulators, and describes the use of chirped-pulsed technology to measure $X^{(3)}$ by nearly degenerate four-wave mixing. Finally, the activities of the National Laser Users Facility and the GDL and OMEGA laser facilities are summarized. The highlights of this issue are a new phase-conversion technique based on distributed polarization rotation has been developed to provide instantaneous smoothing of the intensity nonuniformities at the target plane. The one-dimensional hydrodynamic code LILAC, which includes an average-ion model, has been used to interpret the core conditions of high-density implosions of argon-filled polymer shell targets. The effect of temperature dependence of x-ray absorption features on the interpretation of target implosions has been investigated.

15925 (DOE/ER/18862–1) **Absence of molecular deuterium dissociation during room-temperature permeation into polystyrene ICF target shells.** Honig, A. (Syracuse Univ., NY (USA). Polystyrene microshells filled with deuterium and tritium gas are important target shells for inertially confined fusion (ICF) and are particularly promising for target containing spin-polarized hydrogens fuels. A currently active approach to the latter uses polarized D in HD, in a method which requires preservation of the high purity of the initially prepared HD (very low specified H_2 and D_2 concentrations). This would not be possible if dissociation should occur during permeation into the target shells. We have thus tested polystyrene shells using a novel method which employs very pure polystyrene shells using a novel method which employs very pure ortho-D_2 as the test gas. An upper limit of 6×10^{-4} was deduced for the dissociation of D_2 upon room temperature permeation through an approximately 8 um wall of polystyrene, clearing the way for use of polystyrene target shells for ICF fusion experiments with spin-polarized hydrogens fuels. 19 refs., 1 fig.

15926 (DOE/ER/52161–T1) **Aqueous corrosion and stress corrosion of 316SS for the ITER water-cooled blanket concept: Progress report, 1 January 1991–1 April 1991.** Duquette, D.J.; Steiner, D. Rensselaer Polytechnic Inst., Troy, NY (USA). [1991]. 3p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-89ER52161. Order Number DE91010729. Source: OSTI; NTIS; GPO Dep.

The design of the ITER Driver blanket has been shifted from the Aqueous Lithium Salt Blanket (ALSB) concept to a design using a ceramic breeder with a beryllium multiplier. This concept utilizes water cooling with Type 316 austenitic stainless steel (316SS) as the structure. As a result, research at RPI is now being focused on corrosion and stress-corrosion behavior of 316SS in high purity water with radiolysis products present. The effects of radiolysis products on the corrosion behavior of 316SS will be monitored by in-situ potential and polarization measurements in high energy, Bremmstrahlung radiation at the Rensselaer Linear Accelerator (LINAC). Radiolysis water chemistry modeling, stress corrosion cracking, and corrosion rate calculations will be performed in the corrosion laboratory at the Rensselaer Materials Research Center.

15927 (DOE/ER/54084–1) **Impurity pellet injection experiments at TFTR: Progress report.** Marmar, E.S. Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center. [1991]. 4p. Sponsored by USDOE, Washington, DC (USA). DOE Contract FG02-90ER54084. Order Number DE91010263. Source: OSTI; NTIS; INIS; GPO Dep.

Impurity (Li and C) pellet experiments, which began at TFTR in 1989, and are expected to continue at least through 1991, have continued to produce new and significant results. The most significant of these are: (1) improvements in TFTR supershots after wall-conditioning by Li pellet injection; (2) accurate measurements of the pitch angle profiles of the internal magnetic field using the polarization angles of line emission from Li^+ in the pellet ablation cloud; and (3) initial measurements of pitch angle profiles using the tilt of the LI^+ emission region of the ablation cloud which is stretched out along the field lines.

15928 (DOE/ET/51013–T238) **SOLDESIGN user's manual©.** Pillsbury, R.D. Jr. Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center. Feb 1991. 47p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-78ET51013 ;FG02-91ER54110 ;AC22-84PC70512 ;AT01-76ET10813. (PFC/RR–91-3). Order Number DE91009795. Source: OSTI; NTIS; GPO Dep.

SOLDESIGN is a general purpose program for calculating and plotting magnetic fields, Lorentz body forces, resistances and inductances for a system of coaxial uniform current density solenoidal elements. The program was originally written in 1980 and has been evolving ever since. SOLDESIGN can be used with either interactive (terminal) or file input. Output can be to the terminal or to a file. All input is free-field with comma or space separators. SOLDESIGN contains an interactive help feature that allows the user to examine documentation while executing the program. Input to the program consists of a sequence of word

commands and numeric data. Initially, the geometry of the elements or coils is defined by specifying either the coordinates of one corner of the coil or the coil centroid, a symmetry parameter to allow certain reflections of the coil (e.g., a split pair), the radial and axial builds, and either the overall current density or the total ampere-turns (NI). A more general quadrilateral element is also available. If inductances or resistances are desired, the number of turns must be specified. Field, force, and inductance calculations also require the number of radial current sheets (or integration points). Work is underway to extend the field, force, and, possibly, inductances to non-coaxial solenoidal elements.

15929 (DOE/ET/51013–T239) **Safety and protection for large-scale magnet systems: FY90 report.** Thome, R.J.; Pillsbury, R.D. Jr.; Hale, J.R.; Mann, W.R.; Shajii, A. Massachusetts Inst. of Tech., Cambridge, MA (USA). Plasma Fusion Center. Jan 1991. 45p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-78ET51013. (PFC/RR–91-1). Order Number DE91009796. Source: OSTI; NTIS; INIS; GPO Dep.

In FY89, an Engineers/Masters thesis was completed which included a code for adiabatic quench propagation analysis in multiple, superconducting coils. The capabilities of selected stability codes for internally cooled cabled superconductors were reviewed. Zero and one-dimensional codes were selected for study and application to selected cases for initial evaluation. The modifications to the adiabatic quench code include: the ability to initiate normal regions due to temperature rise from passive materials in close proximity to portions of the superconducting winding which are remote from the initially propagating normal zone, the capability to plot temperature contours within the winding at selected instants of time, the ability to compute the local inductive voltage component within the winding so that this can be combined with the local resistive voltage to get the net voltage distribution along the conductor in the magnet. The test case to which the quench code was applied involved a superconducting solenoid with winding mandrel sections which are sufficiently conducting to carry significant induced currents during a quench and initiate normal regions at sections remote from the initially normal zone. Comparisons were made of the measured and computed current vs time profiles for the coil and with the maximum measured temperature. During FY90 we also reviewed existing codes at MIT for internally cooled cabled superconductor analysis and selected two to"exercise" for possible future modification and use in a quench propagation code. The change to quench analysis is nontrivial for this type of conductor because most codes are stability oriented and this is typically determined on a time scale of 1–10 ms, requiring substantial computational time. This report describes features of the two codes which were selected.

15930 (ECN-C–90-034) **Sensitivity and uncertainty analysis of the nuclear heating in the coils of a fusion reactor.** Hogenbirk, A. Netherlands Energy Research Foundation, Petten (Netherlands). Aug 1990. 48p. Contract ECN 1634;Contract EC NSN1, subtask 3. Order Number DE91623770. Source: OSTI; NTIS (US Sales Only); INIS.

In this report the results are presented of a study on the sensitivity of the nuclear heat in the coils of a fusion reactor to transport cross sections of the main constituents of the shielding blanket, i.e. Fe, Cr and Ni. Also the uncertainty in the above-mentioned nuclear heat due to uncertainties in these cross sections has been calculated. The effect of different cross section types was studied. Coupled (n,γ) calculations were performed using the 121-group GAM-II structure. Basic cross sections were obtained from the 217-group MAT175 library, which is based on JEF-1 and EFF-1. The one-dimensional sensitivity and uncertainty code SENSIT was used, which was modified in order to perform analyses for partial cross sections. A rather important modification of the code was made by including the gain term in the uncertainty calculations. This term was neglected in several previous investigations. The analysis was performed on a realistic iron-water NET/ITER shielding blanket, which was modelled in a one-dimensional plane geometry. S_8P_3 transport calculations were performed with the code ANISN. The resulting uncertainty, arising from uncertainties in Fe, Cr and Ni cross sections, amounts to 12.5 per cent. This figure does, however, not include the uncertainty due to uncertainties in the secondary energy and angular distributions of the neutrons (SED and SAD uncertainties). Moreover, this contribution of SED/SAD uncertainties may be substantial. The estimated upper limit of uncertainty is 20 per cent. (author). 25 refs.; 22 figs.; 8 tabs.

15931 (ECN-C–90-039) **Neutron metrology in LAMPF, USA: Experiments coded 986 and 987.** Ketema, D.J.; Nolthenius, H.J. Netherlands Energy Research Foundation, Petten (Netherlands). Aug 1990. 34p. Project 0940.01. Order Number DE91623782. Source: OSTI; NTIS (US Sales Only); INIS.

The characterization of appropriate materials for fusion reactors requires a high intensity neutron source which simulates the neutron spectrum and the radiation conditions at the positions of interest in a fusion reactor (first wall). A neutron spectrum of interest is found in the Clinton P. Anderson Los Alamos Meson Physics Facility (LAMPF). Various ceramic materials and some polycrystalline graphites were irradiated in this facility during two intervals of time in 1986 and 1987. The specimens were accompanied by several sets with activation detectors. This report presents the saturation activities per atom obtained from these sets. (author). 3 refs.; 8 figs.; 10 tabs.

15932 (ECN-I–90-040) **Neutron metrology in the HFR R139-64 (aktines): irradiation of steel as first wall material for fusion reactors.** Ketema, D.J.; Voorbraak, W.P. Netherlands Energy Research Foundation, Petten (Netherlands). Oct 1990. 49p. Order Number DE91625349. Source: OSTI; NTIS (US Sales Only); INIS.

The experiment R139-64 (Aktines) for testing the stainless steel type 316L (European reference heat) has been irradiated in the H.F.R. Petten. This report presents the final neutron metrology results obtained from activation monitors loaded in several specimen holders. Data about the helium production as well as the number of displacements per atom are also included. The report is completed with the results for the second loading of specimen holder 13. The irradiation conditions for this experiment carried out in a SIENA type capsule in the H.F.R. position E7 represent the conditions at the first wall of the NET (Next European Torus). 10 refs.; 6 figs.; 11 tabs.

15933 (ECN-R–90-007) **Self-shielding in the NET fusion reactor blanket and effects on uncertainty calculations.** Hogenbirk, A. Netherlands Energy Research Foundation, Petten (Netherlands). Nov 1990. 28p. Order Number DE91625342. Source: OSTI; NTIS (US Sales Only); INIS.

Task NSN1, subtask 3 of the European Fusion Technology Programme.

In this report the results are presented of an analysis of a NET iron/water inboard shielding blanket using energy self-shielded cross sections. Coupled (n,γ) transport calculations have been performed in an S_8P_8 approximation with the code ANISN using cross sections in the 121-group GAM-II structure. Basic cross sections were obtained from the 217-group MAT175 library, which is based on JEF-1 and EFF-1. Energy self-shielding was taken into account using the Bondarenko method. The results of this analysis are compared with those obtained in report ECN-C–90-034, in which a similar analysis had been presented using infinite dilute cross sections. It is shown that the effect of energy self-shielding on the neutron flux in the coils of the NET design is considerable, whereas the γ-flux is hardly influenced. Also the effect of using energy self-shielded cross sections in sensitivity and uncertainty analyses was studied. In these analyses the sensitivity of the total nuclear heating in the innermost interval of the inboard coils to the total cross sections of Fe, Cr and Ni has been studied. The analyses have been performed using an ECN-modified version of the code SENSIT. Due to the effect of self-shielding not only the value of the response parameter changes (the total nuclear heating in the coil increases with 13%), but also the associated relative uncertainty (the relative uncertainty due to uncertainties in the total cross sections of Fe, Cr and Ni decreases with 8%; the absolute value of the uncertainty increases however). The conclusion is that for reliable calculations of the nuclear heating the effects of self-shielding should be taken into account; for the uncertainty estimates this is less important. (author). 15 refs.; 15 figs.; 6 tabs.

15934 (ECN-RX–90-041) **Structural and metallurgical effects in stainless steel for first wall application in simulated**

plasma disruptions. Laan, J.G. van der (Netherlands Energy Research Foundation, Petten (Netherlands)); Klippel, H.T.; Bakker, J.; Stad, R.C.L. van der. Netherlands Energy Research Foundation, Petten (Netherlands). Jul 1990. 10p. (CONF-891204–: 4. international conference on fusion reactor materials, Kyoto (Japan), 4-8 Dec 1989). Order Number DE91625343. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted for publication in the Journal of Nuclear Materials.

This study presents experimental disruption simulation results using a pulsed high power laser beam with high energy density (0-20 MJ/m2) and short pulse duration (0.2-20 ms) under vacuum conditions. Time-dependent profiles of the laser beam are give. The paper deals mainly with the European reference heat austenitic steel type AISI 316L. The melting effects are quantified and compared with numerical predictions by a transient heat load code. The effects of repeated disruptions are analyzed. The extrapolation of experimental data obtained with small spots to predictions for larger areas is addressed. (author). 11 refs.; 6 figs.

15935 (ECN-RX–90-047) **Simulation and analysis of the response of carbon materials to off-normal heat loads accompanying plasma disruptions.** Laan, J.G. van der (Netherlands Energy Research Foundation, Petten (Netherlands)); Klippel, H.T. Netherlands Energy Research Foundation, Petten (Netherlands). Jul 1990. 10p. (CONF-891204–: 4. international conference on fusion reactor materials, Kyoto (Japan), 4-8 Dec 1989). Order Number DE91625344. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted for publication in the Journal of Nuclear Materials.

The effects of off-normal heat-loads accompanying plasma disruptions have been studied by both experimental and numerical simulations. Experiments have been performed on a range of polygranular graphites, pyrolytic graphite and carbon composite material. The measured erosion is compared with numerical predictions by a transient heat load code taking a revised value for the vaporization enthalpy of carbon. The effect of variations in thermophysical material parameters on thermal erosion behaviour is discussed. (author). 12 refs.; 5 figs.; 1 tab.

15936 (ECN-RX–90-051) **Simulation and analysis of the response of carbon fiber composites and pyrolytic graphites to off-normal high heat loads: Contribution to the 5th Workshop on carbon for fusion applications, KFA Juelich, 17-18 May 1990.** Laan, J.G. van der (Netherlands Energy Research Foundation, Petten (Netherlands)); Klippel, H.T.; Stad, R.C.L. van der; Bakker, J. Netherlands Energy Research Foundation, Petten (Netherlands). Aug 1990. 17p. (CONF-9005339–: 5. Workshop on carbon for fusion applications, Juelich (Germany, F.R.), 17-18 May 1990). Order Number DE91625345. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted for publication in Fusion Technology.

The response of plasma facing materials to off-normal high heat-loads expected in NET/ITER disruptions has been studied by both experimental and numerical simulations. Experiments have been performed on a number of pyrolytic graphites and carbon fiber composites. The measured erosion is compared with numerical predictions by a transient heat load code. The effect of variations in thermo-physical material parameters on thermal erosion behavior is discussed. On the surface of pyrolytic graphites cracking is observed, even below the erosion threshold. (author). 12 refs.; 8 figs.; 1 tab.

15937 (ECN-RX–90-053) **Status of radiation damage evaluation in fusion materials irradiation experiments.** Alberman, A. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)); Nolthenius, H.; Voorbraak, W.P. Netherlands Energy Research Foundation, Petten (Netherlands). Aug 1990. 10p. (CONF-900814–: 7. ASTM-EURATOM symposium on reactor dosimetry, Strasbourg (France), 27-31 Aug 1990). Order Number DE91625350. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted for publication.

The Euratom Working Group on Reactor Dosimetry (EWGRD) has issued several documents to establish standardized procedures and recommendations on neutron spectrum information, fluence measurements, damage cross section data, etc. This paper reviews suitable irradiation parameters for materials, in such way that experimental results obtained in a research reactor environment can be applied in the design of fusion power plants. Recent developments in fusion reactor technology programs and mainly the large European component qualification tests undertaken for NET have led to the EWGRD to consider new requirements. For radiation environments being quite different in fusion systems, compared to available test facilities, such as Material Testing Reactors or high-energy proton sources, classical dosimetry interpretation may be in-sufficient to assess proper damage correlations to fusion materials. Particularly the application to ceramics (tritium breeding blankets, insulators) addresses new requirements: damage to sublattices, relevance of 'dpa' as irradiation parameter, etc. This paper presents the status of available dosimetry methods, recommended cross sections and damage assessment, relevant for fusion technology materials irradiations. (author). 17 refs.; 1 fig.; 1 tab.

15938 (ECN-RX–90-062) **Sensitivity and uncertainty analysis of NET/ITER shielding blankets.** Hogenbirk, A. (Netherlands Energy Research Foundation, Petten (Netherlands)); Gruppelaar, H.; Verschuur, K.A. Netherlands Energy Research Foundation, Petten (Netherlands). Sep 1990. 8p. (CONF-900918–: 16. symposium on fusion technology (SOFT), London (UK), 3-7 Sep 1990). Order Number DE91625351. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted for publication.

Results are presented of sensitivity and uncertainty calculations based upon the European fusion file (EFF-1). The effect of uncertainties in Fe, Cr and Ni cross sections on the nuclear heating in the coils of a NET/ITER shielding blanket has been studied. The analysis has been performed for the total cross section as well as partial cross sections. The correct expression for the sensitivity profile was used, including the gain term. The resulting uncertainty in the nuclear heating lies between 10 and 20 per cent. (author). 18 refs.; 2 figs.; 2 tabs.

15939 (ECN-RX–90-076) **Plasma sprayed titanium carbide coatings for first wall applications in fusion devices.** Groot, P. (Netherlands Energy Research Foundation, Petten (Netherlands)); Laan, J.G. van der; Mack, M.; Dvorak, M.; Huber, P. Netherlands Energy Research Foundation, Petten (Netherlands). Oct 1990. 21p. (CONF-891204–: 4. international conference on fusion reactor materials, Kyoto (Japan), 4-8 Dec 1989). Order Number DE91625346. Source: OSTI; NTIS (US Sales Only); INIS.

To appear in the Conference Proceedings and in The Journal of Nuclear Materials.

For protection applications in fusion devices thick TiC coatings are being developed. Coatings have been produced by plasma spraying at atmospheric pressure (APS), low pressure (LPPS) and in vacuum (VPS). Microstructural analysis of these TiC coatings includes X-ray diffraction, analysis of chemical composition, texture analysis and optical microscopy. Thermo-mechanical evaluation includes short pulse laser heat flux and thermal fatigue tests, simulating plasma disruptions. The effect of thickness, porosity and microstructure is discussed. (author). 5 refs.; 3 figs.; 2 tabs.

15940 (EGG-FSP–9435) **Preliminary analysis of uranium bed air-exposure test data.** Longhurst, G.R. EG and G Idaho, Inc., Idaho Falls, ID (USA). Dec 1990. 53p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC07-76ID01570. Order Number DE91010078. Source: OSTI; NTIS (US Sales Only); GPO Dep.

A series of experiments has been conducted at Ontario Hydro Research Division, Toronto, Ontario, Canada, to investigate the response of uranium storage beds for tritium to ingress of air. This project has been a cooperative activity involving Ontario Hydro, the Canadian Fusion Fuels Technology Project, the Princeton Plasma Physics Laboratory, and the Idaho National Engineering Laboratory. Experiments included test of 5-g and 25-g uranium beds in bench-scale experiments to characterize response characteristics and full-scale tests of a 3-kg uranium bed. Analyses of the bench-scale experiment data were performed and led to the prediction of the temperature excursion in the full-scale test with good accuracy. Chemical processes believed to be taking place within the beds when air is admitted include approximately stoichiometric reaction of the uranium with oxygen and nitrogen in the air to form UO and UN at lower temperatures and higher oxide states (UO_2 and U_2N_3) at higher temperatures. In most of the tests conducted the reaction

stopped after 30-50% of the uranium had reacted. The quenching process appears to be a combination of the effects of an oxide/nitride product film that hinders transport of the reactive gases to the uranium face and an inert gas blanketing at higher temperatures. There was no evidence of tritium escape in these tests. The conclusion is that the consequences of a single-ended air-ingress accident should not be catastrophic in the sense of large energy release of tritium release. 3 refs., 37 figs.

15941 (EGG-M–89512) **Hydrogen transport behavior of metal coatings for plasma facing components.** Anderl, R.A.; Holland, D.F.; Longhurst, G.R. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1990]. 20p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC07-76ID01570. (CONF-900505–15: 9. plasma surface interactions in controlled fusion devices conference, Bournemouth (UK), 20-25 May 1990). Order Number DE91010093. Source: OSTI; NTIS; INIS; GPO Dep.

Plasma-facing components for experimental and commercial fusion reactor studies may include cladding or coatings of refractory metals like tungsten on metallic structural substrates such as copper, vanadium alloys and austenitic stainless steel. Issues of safety and fuel economy include the potential for inventory buildup and permeation of tritium implanted into the plasma-facing surface. This paper reports on laboratory-scale studies with 3-keV D_3^+ ion beams to investigate the hydrogen transport behavior in tungsten coatings on substrates of copper. These experiments entailed measurements of the deuterium re-emission and permeation rates for tungsten, copper, and tungsten-coated copper specimens at temperatures ranging from 638 K to 825 K and implanting particle fluxes of approximately 5×10^{19} D/m^{2}s. Diffusion constants and surface recombination coefficients with enhancement factors due to sputtering were obtained from these measurements. These data may be used in calculations to estimate permeation rates and inventory buildups for proposed diverter designs. 18 refs., 3 figs., 3 tabs.

15942 (IAE–4992-8) **Neutron radiation field behind a nonuniform shield of thermonuclear reactors.** Zhirkin, A.V.; Sakharov, V.K.; Shatalov, G.E. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1990. 20p. (In Russian). Order Number DE91623766. Source: OSTI; NTIS (US Sales Only); INIS.

The fast neutron field characteristics outside of a homogenized iron-water shield with diagnostic channels peculiar to thermonuclear reactors (TNR) have been determined by the RNZ-4 code developed on the basis of the MORSE program. The results obtained have been analysed. The splitting and Russian roulette methods combined with exponential transformation and scattering angle shift were used in the calculations. The validity of the methods chosen and the reliability of the constant support were checked by comparison with experimental data. 7 refs.; 9 figs.; 1 tab.

15943 (INIS-SU–235, pp. 84-97) **Controlled heavy-ion fusion and deuterium targets.** Basko, M.M.; Imshennik, V.S.; Koshkarev, D.G.; Churazov, M.D.; Sherstnev, K.B. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 119p. (In Russian). In *Simulation of physical processes: Scientific-technical collection.* Order Number DE91003084. Source: OSTI; NTIS (US Sales Only); INIS.

The up-to-data state of works on inertial heavy-ion synthesis (IHIS) is described; basic physical principles of this direction of controlled heavy-ion synthesis are presented. Optimization problems are considered using the illustration of spherically-symmetrical target with tritium-deuterium fuel. Investigation of possibility to create deuterium-deuterium (DD) targets of IHIS is carried out. The structure of the cylindrical DD target with the use of magnetic heat insulation and detonation condition of DD fuel burning is suggested. 16 refs.; 7 figs.; 7 tabs.

15944 (INIS-SU–240, pp. 46-48) **On a possibility of realization of three-dimensional compression of an inhomogeneous liner.** Kosarev, V.I.; Lobanov, A.I.; Chukbar, K.V.; Shestakov, Yu.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1989. 75p. (In Russian). In *Thermonuclear synthesis: Scientific-technical collection.* Order Number DE91003079. Source: OSTI; NTIS (US Sales Only); INIS.

Two-dimensional (R,z) numerical calculation of plasma liner compression in the cone cavity, aimed at determining optimal initial configuration for achieving the maximal compression, was conducted. Three-dimensional energy concentration was provided during liner compression due to mass redistribution over its length. 7 refs.; 4 figs.

15945 (IPP–III/168) **Optimized control of the plasma position in the tokamaks ASDEX and TCV under consideration of the mains-dependent current rectifiers.** Schneider, F. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.); Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Elektrotechnik und Informationstechnik. Nov 1990. 117p. (In German). Order Number DE91764557. Source: OSTI; NTIS (US Sales Only); INIS.

An optimized plasma position control system for ASDEX and TCV tokamak is developed and tested. The problem is handled by the following contributions: A reliable measuring method for plasma position and shape; eigenvalue models describing the dynamics of the processes; introduction of replacing control parameters removing the discontinuities in the startup phase of the plasma current; development of time-dependently regulatable measurement and control matrices for set-point adjustment and decoupling of the control circuits; determination of methods for investigation and optimization of control circuits with mains-dependent current rectifiers; development of synchronizable, time-optimized regulators for circuits with mains-dependent current rectifiers; construction of computer programs for optimization of control circuits with tokamak plasmas. (AH).

15946 (KFK–4790) **Treating the neutronics of a (d,t)-fusion reactor operating on the tokamak principle (NET).** Fischer, U. Kernforschungszentrum Karlsruhe GmbH (Germany, F.R.). Inst. fuer Neutronenphysik und Reaktortechnik; Kernforschungszentrum Karlsruhe GmbH (Germany, F.R.). Projekt Kernfusion; Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Maschinenbau. Oct 1990. 220p. (In German). Order Number DE91764474. Source: OSTI; NTIS (US Sales Only); INIS.

The primary aim of this work is to check the simplified one-dimensional neutronic approach being used frequently in design calculations. Therefore the neutronics of the NET (Next European Torus)-reactor is treated in a three-dimensional torus sector model by means of Monte Carlo calculations with the MCNP-code. Various blanket variants with different neutronic characteristics are taken into account. All of them had been developed for use in the NET-reactor: a ceramic solid breeder blanket using beryllium as neutron multiplier, a self-cooled liquid metal blanket using the eutectic alloy Pb-17Li or, alternatively, pure lithium as breeding material/coolant, and an aqueous lithium salt solution blanket. It is shown, that the one-dimensional approach can be applied in design calculations for evaluating power density distributions, if the plasma source is normalized in a consistent manner, if its spatial distribution is choosen appropriately, and, furthermore, if its angular dependence is taken into account. A three-dimensional treatment of the actual tokamak geometry, however, is necessary for determining the breeding performance of the blanket variants and for performing shielding calculations of the whole system blanket/shield. (orig./HP).

15947 (LA-UR–91-985) **Fast iterative technique for the calculation of frequency dependent gain in excimer laser amplifiers.** Sze, R.C. Los Alamos National Lab., NM (USA). [1991]. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910123–20: OE/LASE '91: 4th Society of Photo-Optical Instrumentation Engineers (SPIE) international symposium, Los Angeles, CA (USA), 20-25 Jan 1991). Order Number DE91009965. Source: OSTI; NTIS; INIS; GPO Dep.

The motivation in initiating these calculations is to allow us to observe the frequency evolution of a laser pulse as it propagates through an amplifier and then through a sequence of amplifiers. The question we seek to answer is what pulse shape do we need to produce out of a front-end oscillator so that after it propagates through the whole Aurora KrF fusion amplifier chain will result in high energy, broad-band laser fields of a given bandwidth that can

be focussed onto a fusion target. The propagation of a single frequency source through an amplifier with distributed loss was considered by Rigrod and was significantly expanded by Hunter and Hunter. The latter included amplified spontaneous emission [ASE] considerations both in the direction of and transverse to the coherent field. Analytic solutions that include forward and backward prapagating fields and ASE were derived which were transcendental in nature but allowed for fairly easy computer calculations. Transverse ASE were calculated using the unsaturated gain resulting from longitudinal fields and were used to compare this with the longitudinal field equations. Large computer programs are now available at LANL which include the influence of transverse ASE on the longitudinal fields. However, none of these considerations have worried about the changes in the frequency characteristics of the propagating field or of how each of the frequency field components contributes to the saturation of the gain. The inclusion of full frequency characteristics to the analytic solutions of Hunter and Hunter proved impossible at least for this author and a new calculational technique was developed and is the subject of this talk.

15948 (LBL–29743) **Heavy Ion Fusion Accelerator Research (HIFAR) year-end report, April 1, 1990–September 30, 1990.** Lawrence Berkeley Lab., CA (USA). Dec 1990. 25p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00098. (HIFAN–478). Order Number DE91010206. Source: OSTI; NTIS; INIS; GPO Dep.

The basic objective of the Heavy Ion Fusion Accelerator Research (HIFAR) program is to assess the suitability of heavy ion accelerators as igniters for Inertial Confinement Fusion (ICF). A specific accelerator technology, induction acceleration, is being studied at the Lawrence Berkeley Laboratory and at the Lawrence Livermore National Laboratory. The HIFAR program addresses the generation of high-power, high-brightness beams of heavy ions, the understanding of the scaling laws in this novel physics regime, and the validation of new accelerator strategies to cut costs. Key elements to be addressed include: (1) beam quality limits set by transverse and longitudinal beam physics; (2) development of induction accelerating modules, and multiple-beam hardware, at affordable costs; (3) acceleration of multiple beams with current amplification without significant dilution of the optical quality of the beams; (4) final bunching, transport, and accurate focusing on a small target.

15949 (NIFS-WS–2) **International panel on 14 MeV intense neutron source based on accelerators for fusion material study: Proceedings.** Miyahara, A. (National Inst. for Fusion Science, Nagoya (Japan)); Wiffen, W.F. National Inst. for Fusion Science, Nagoya (Japan). [1991]. 20p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. (CONF-910169–Summ.: International panel on 14 MeV intense neutron source based on accelerators for fusion material studies, Tokyo (Japan), 14-16 Jan 1991). Order Number DE91009935. Source: OSTI; NTIS; INIS; GPO Dep.

The International Panel on 14 MeV Intense Neutron Source Based on Accelerators for Fusion Materials Study was held January 14–16, 1991, at the Department of Nuclear Engineering, the University of Tokyo. The panel was attended by 38 participants, including 9 from the US, 3 from the EC, and 1 from Canada. This meeting had initially been planned as a bilateral US-Japan workshop, but was expanded to international participation in response to the recently issued FPAC report in the US and the FPEB report in the EC. Both of these documents proposed schedules for the DEMO fusion reactor that present a challenge for the materials community, and restated the importance of the required materials development and the necessity of an international 14 MeV neutron source for the development of the magnetic fusion energy option. The scope of the panel was restricted to source concepts judged to be practical within the next five years little further development. The goals of the panel were to reach a consensus on a practical approach, to collect information on accelerator based concepts, to list critical issues, and to produce tentative schedules for design and development of a neutron source. Most of the panel presentations and discussions were on the d-Li approach to neutron source. The status of the FMI project at its termination and the advance in accelerator technology and target concepts since the time were summarized. No feasibility questions remaining with this approach were seen, but high power beam-on-target verification tests and demonstration of accelerator performance limits remain to be accomplished.

15950 (ORNL/FEDC–90/3) **Radiation analysis of the ITER pellet injection system.** Gouge, M.J. (Oak Ridge National Lab., TN (USA)); Gomes, I.C.; Gomes, L.T.; Stevens, P.N,. Oak Ridge National Lab., TN (USA). Fusion Engineering Design Center. Mar 1991. 31p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010485. Source: OSTI; NTIS; INIS; GPO Dep.

The results of neutronics calculations for the pellet injection system of the International Thermonuclear Experimental Reactor (ITER) are described. Hands-on maintenance of components in the pellet injection room results in a considerable simplification of maintenance support equipment and in greater system availability. The basic configuration of the pellet injection system includes small-diameter guide tubes with which the pellet may have several small-angle collisions before reaching the plasma. The pellet injector port through which the guide tubes pass will be shared with ITER plasma diagnostics, so the calculation takes into account penetrations to accommodate numerous channels for a neutron spectrometer and neutron and gamma-ray cameras. The conservative assumption of steady-state operation of ITER for 1000 days was taken as the baseline for calculating the activation of components in the pellet injection room. The plasma configuration is based on the current ITER guidelines, the first wall configuration is based on the most recently updated configuration, and the blanket configuration is based on the US proposal for the blanket. The plasma, coils, and blanket regions were analyzed with the Monte Carlo code MCNP. The transport of neutrons through the penetrations was also performed with MCNP. The pellet injection room was modeled with the two-dimensional discrete ordinates code DORT, which was also used for the transport of neutrons during operation and of gamma rays caused by activation. The activation calculations were carried out with the REBATE code. Results from this study indicate that restricted personnel access to the pellet injection room is possible, so limited hands-on maintenance can be performed on the majority of the components in the room.

15951 (SAND–89-1929) **Ion beam testing of the Aerolor X-point dump plate for the Joint European Torus.** Salmonson, J.C.; Watkins, J.G.; Watson, R.D.; McDonald, J.M. Sandia National Labs., Albuquerque, NM (USA). Jan 1991. 26p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. Order Number DE91010719. Source: OSTI; NTIS; INIS; GPO Dep.

The durability of a carbon-carbon composite, Aerolor A05, X-point divertor dump plate to thermal fatigue was evaluated for the Joint European Torus (JET) at Sandia's Plasma Material Test Facility. Of primary interest was the effect of thermal cycling on the carbon-carbon threads of the bolted attachment scheme for the Aerolor X-point divertor. This report describes the testing performed at the Ion Beam Test System and the test and analysis results obtained in support of this effort. After completing 1000 thermal cycles, where the surface temperature of the 8 cm by 8 cm by 2.3 cm Aerolor tile reached 2200°C during a 10 s, 500 W/cm^2 pulse, the tile survived without any noticeable damage. Post test inspection of the carbon-carbon threads showed only minor wear and no signs of significant damage. Thermal modeling of the test article using the ABAQUS finite element code agreed very well with experimental results. The thermal creep experienced by the M-12 stainless steel bolt during ion beam testing will not be expected to occur during normal operations in JET because of the longer cycle times between the thermal events. Finite element analysis indicates that the longer cycle times at the JET will reduce the peak temperatures in the vicinity of the bolt and bolt insert below the level at which thermal creep would occur. An additional margin of safety could be obtained by using Inconel or Nimonic fasteners. Overall, the performance of the bolted divertor design to thermal fatigue was acceptable. 12 figs., 2 tabs.

15952 (SAND–90-2357C) **Plasma-sprayed materials for magnetic fusion energy devices.** Smith, M.F.; Croessmann, C.D.; Hosking, F.M.; Watson, R.D.; Koski, J.A. Sandia National Labs., Albuquerque, NM (USA). [1991]. 10p. Sponsored by USDOE,

Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-9106148–1: 2. plasma-technik symposium, Lucerne (Switzerland), 5-7 Jun 1991). Order Number DE91010476. Source: OSTI; NTIS; GPO Dep.

Plasma spray technology is being evaluated as a means to address important fabrication and maintenance problems associated with plasma-interactive components in magnetic fusion devices (e.g., limiters, divertors, and some first wall surfaces). Low-oxygen vacuum plasma sprayed copper has been tested as a ductile, high thermal conductivity interlayer to limit thermal stress and prevent cracking when brazing pyrolytic graphite (PG) tiles to high-strength metal cooling tubes. A brazed tile/tube assembly with this sprayed interlayer has survived thermal testing up to a surface heat flux of 2.0 kW cm^{-2} as computed on the basis of the power removed in the sample cooling water. A vacuum-sprayed, tungsten-wire-reinforced, copper composite has also been studied as a means to produce an interlayer with highly anisotropic thermal expansion similar to that of PG. Beryllium and tungsten are the present alternatives to graphite for plasma-facing surfaces. High heat flux testing of plasma-sprayed beryllium samples indicates that adhesion and thermal conductivity must be improved. Plasma-sprayed tungsten has performed well in thermal tests, but other factors may rule out the use of tungsten in near term fusion devices. 6 refs., 6 figs., 1 tab.

15953 (SAND–91-0043C) **Intense light-ion beams provide a robust, common-driver path towards ignition, gain and commercial fusion energy.** Ramirez, J.J. (Sandia National Labs., Albuquerque, NM (USA)); Cook, D.L.; Rice, J.K.; Matzen, M.K.; Johnson, D.L.; Boyes, J.D.; Olson, C.L.; Prestwich, K.R.; Clauser, M.J.; Mehlhorn, T.A.; Stinnett, R.W.; Allshouse, G.O.; Kulcinski, G.L.; Moses, G.A.; PeteSandia National Labs., Albuquerque, NM (USA). [1991]. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-9104210–1: International Atomic Energy Agency (IAEA) technical committee meeting on drivers for inertial confinement fusion (ICF), Osaka (Japan), 15-19 Apr 1991). Order Number DE91010584. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Intense light-ion beams are being developed for investigations of Inertial Confinement Fusion (ICF). This effort has concentrated on developing the Particle Beam Fusion Accelerator II (PBFA-II) at Sandia as a driver for ICF target experiments, on design concepts for a high-yield, high-gain Laboratory Microfusion Facility (LMF), and on a comprehensive system study of a light-ion beam driven commercial fusion reactor (LIBRA). This paper reports on the status of design concepts and research in these areas. 8 refs., 6 figs.

15954 (UCRL-JC–104981-Rev.1) **3D particle simulation of beams using the WARP code: Transport around bends: Revision 1.** Friedman, A. (Lawrence Livermore National Lab., CA (USA)); Grote, D.P.; Callahan, D.A.; Langdon, A.B.; Haber, I. Lawrence Livermore National Lab., CA (USA). 15 Mar 1991. 15p. Sponsored by Department of Defense, Washington, DC (USA); USDOE, Washington, DC (USA); Lawrence Berkeley Lab., CA (USA). DOE Contract W-7405-ENG-48 ;AC03-76SF00098. (CONF-901219–6-Rev.: International symposium on heavy ion inertial fusion, Monterey, CA (USA), 3-6 Dec 1990). Order Number DE91010464. Source: OSTI; NTIS (US Sales Only); GPO Dep.

WARP is a discrete simulation program which was developed for studies of space-charge-dominated ion beams. It combines features of an accelerator code and a particle-in-cell plasma simulation. The code architecture, and techniques employed to enhance efficiency, are briefly described. Current applications are reviewed. In this paper we emphasize the physics of transport of three-dimensional beams around bends. We present a simple bent-beam PIC algorithm. Using this model, we have followed a long, thin beam around a bend in a simple racetrack system (assuming straight-pipe self-fields). Results on beam dynamics are presented; no transverse emittance growth (at mid-pulse) is observed. 12 refs., 5 figs.

15955 (UWFDM–850) **SIRIUS-T: A study of a symmetrically illuminated inertial confinement fusion tritium production facility: Final report.** Badger, B.; Sviatoslavksy, I.N.; Bruggink, D.; Engelstad, R.L.; Kulcinski, G.L.; Larsen, E.M.; Lovell, E.G.; MacFarlane, J.J.; Mogahed, E.A.; Moses, G.A.; Moucha, A.; Peterson, R.R.; Powers, J.; Sawan, M.E.; Wittenberg, L.J. Wisconsin Univ., Madison, WI (USA). Fusion Technology Inst. Dec 1990. 235p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AS03-88DP10754. Order Number DE91009263. Source: OSTI; NTIS; GPO Dep.

The aging US tritium production reactors are slowly being phased out and the US Department of Energy has initiated a "New Production Reactors Program" which will provide for the design, construction and operation of new facilities for the production of tritium and other special nuclear materials. Preliminary requirements are currently being prepared, leading to construction and operation by the year 2000. Unfortunately, inertial confinement fusion (ICF) cannot possibly be ready to perform such a task on this short time scale. However, it is instructive to see how well it can do in producing tritium when ICF has been demonstrated and a comparison with the proposed production schemes is conducted here. SIRIUS-T is conceptual design study of a tritium production facility utilizing direct drive symmetrically illuminated inertial confinement fusion. The "T" designation distinguishes it from SIRIUS-M, a materials facility, and SIRIUS-C, a commercial power plant. As in any other fusion related design study, a certain amount of technical extrapolation has been made in SIRIUS-T. It should be said early on, however, that in areas of uncertainty, we have always taken the conservative approach. This is evident in our choice of target gain, number of beams selected for symmetric illumination and elsewhere throughout the study. In performing the economic analysis we have also attempted to err on the conservative side. This too is evident in our costing of the driver and the reactor chamber. For these reasons, we feel that this study projects enough confidence as to make it worthy of comparison with the other proposed production systems.

99 GENERAL AND MISCELLANEOUS

15956 (FNAL-TM–1722) **Education programs at the DOE national laboratories: Benefits to teachers and students.** Bardeen, M.G. Fermi National Accelerator Lab., Batavia, IL (USA). Mar 1991. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH03000. (CONF-910340–4: International industrial symposium on the super collider, Atlanta, GA (USA), 13-15 Mar 1991). Order Number DE91010324. Source: OSTI; NTIS; GPO Dep.

In 1980, when Fermilab began supporting precollege education programs, it was not at all clear that a research laboratory was an appropriate setting for major precollege education programs. Participants have given us the answer, "Yes!" Programs for students and teachers work at national laboratories because it is not business as usual. Participants come to a world class research laboratory for a unique opportunity to witness science conducted at the frontier of human understanding. They gain invaluable experience being in an environment where science is done. We have shown that teachers, in particular, respond positively to being treated as professionals and peers by researchers. Benefits to teachers and students from participating in a national laboratory's education programs may be broadly categorized as either changed attitudes toward science or new knowledge about science and science teaching and will be described.

9901 Management

15957 (BNL–45929) **An Organizational Cultural Assessment of Princeton Plasma Physics Laboratory.** Haber, S.B.; Crouch, D.A. Brookhaven National Lab., Upton, NY (USA). 15 Mar 1991. 71p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC02-76CH00016. Order Number DE91010981. Source: OSTI; NTIS; GPO Dep.

An Organizational Cultural Assessment (OCA) was performed at the Princeton Plasma Physics Laboratory (PPPL) by administering an Organizational Culture Survey (OCS) that queried employees on the subjects of organizational culture, various aspects of communications, employee commitment, work group cohesion, coordination of work, environmental concerns, hazardous nature of work, safety and overall job satisfaction. Many of these subjects are assessed in the OCS through highly developed and validated

scales that have been administered in many different types of organizations. Some of the issues, especially the questions on environmental, safety and health concerns, are newly developed and are still being modified. The purpose of the OCS is to measure in a quantitative and objective way the notion of "culture;" that is, the values, attitudes, and beliefs of the individuals working within the organization. In addition, through the OCS, a broad sample of individuals can be reached that would probably not be interviewed or observed during the course of a typical assessment. The OCS also provides a descriptive profile of the organization at one point in time that can then be compared to a profile taken at a different point in time to assess changes in the culture of the organization.

15958 (DOE/AD–0005) **Information Resources Management long-range plan: FY 1992–FY 1996.** USDOE Office of Administration and Human Resource Management, Washington, DC (USA). Office of Information Resources Management Policy, Plans, and Oversight. Dec 1990. 269p. Sponsored by USDOE, Washington, DC (USA). Order Number DE91009745. Source: OSTI; NTIS; GPO Dep.

The Information Resources Management (IRM) activities which support the diverse programmatic missions in the Department of Energy are complex. IRM requirements are continually changing to reflect changes in technology, policy, and program mission. Long-range planning for IRM has been developed to assure that adequate support is available for cost-effective accomplishment of mission objectives. IRM is vital to the successful accomplishment of the programmatic missions in the Department. This is evidenced by the fact that the estimated information technology resources (ITR) cost for FY 1991, approximately $1.58 billion, is about 9 percent of the total Departmental FY 1991 budget request, while the total estimated ITR cost for the entire Federal Government is less than 1.7 percent of the total Federal budget request for the same time period. Recognizing the ever-increasing importance of IRM to the Department, activities in this area were reorganized this year. This reorganization centralized IRM within DOE and created a clear division of responsibility between policy and operations. Management of the information technology resources within IRM (e.g., information systems, computing resources, and telecommunications) were consolidated with printing and publishing activities, records management, IRM standards, and telecommunications and unclassified computer security. The Office of Scientific and Technical Information continues to have the responsibility for information management support and direction for DOE's scientific and technical information. This Plan reflects this transition and, therefore, incorporates information on other areas of IRM, where information is available. The management plan and status of information Systems, Computing Resources and Telecommunication Systems is provided with charts and graphs. 40 refs., 57 figs., 22 tabs.

15959 (INIS-GB–345) **HM Nuclear Installations Inspectorate: a bibliography of published work, 1962-1987.** McNichol, K. (comp.). Health and Safety Executive, Sheffield (UK). Apr 1988 52p. Order Number DE91626188. Source: OSTI; NTIS (US Sales Only); INIS.

Amendments dated Mar 1989 (3 p.) and May 1990 (2 p.) are enclosed.

This bibliography contains references to published reports, conference papers and journal articles produced by individual members of the Nuclear Installations Inspectorate and the Inspectorate as a whole. The bibliography has been compiled from records held by the Health and Safety Executive Library and Information Service. All items have been indexed in HSELINE, HSE's publicly available database. The bibliography is arranged in 2 parts: by author(s) and by subject. (author).

15960 (INIS-mf–12181) **GSF annual report 1988. Lectures, publications, conference papers, guest lectures, addresses.** Gesellschaft fuer Strahlen- und Umweltforschung mbH Muenchen, Neuherberg (Germany, F.R.). 1989 98p. (In German). Order Number DE91764342. Source: OSTI; NTIS (US Sales Only); INIS.

The annual report contains publications and lectures of GSF-staff as well as guest lectures within the GSF in alphabetical order. (DG).

15961 (INIS-mf–12803) **IGC highlights 1988.** Indira Gandhi Centre for Atomic Research, Kalpakkam (India). 1989 84p. Order Number DE91625178. Source: OSTI; NTIS (US Sales Only); INIS.

The major thrust of the research and development (R and D) activities of the Indira Gandhi Centre for Atomic Research (IGCAR), Kalpakkam is oriented towards mastering fast breeder reactor (FBR) technology. Towards this end, its current R and D activities are carried out in a wide variety of disciplines. Highlights of its R and D activities during 1988 are summarised under the headings: Reactor Engineering and Design, Reactor Physics and Safety, Materials Science and Technology, Sodium Chemistry and Technology, Fuel Reprocessing and Electronics and Instrumentation. The text is illustrated with a number of figures, graphs and coloured pictures. (M.G.B.). figs., tabs.

15962 (INIS-mf–12804) **Bhabha Atomic Research Centre annual report : 1989.** Bhabha Atomic Research Centre, Bombay (India). 1991 140p. Order Number DE91625179. Source: OSTI; NTIS (US Sales Only); INIS.

The main thrust of the various research and development (R and D) activities of the Bhabha Atomic Research Centre (BARC), Bombay, is towards the implementation of India's nuclear power programme. To that end, its R and D activities cover the entire nuclear fuel cycle, reactor technology; applications of radioisotopes and radiations in agriculture, medicine and industries; and radiation protection in nuclear installations. The report presents in summarised form the R and D activities carried out during 1989 in the chapters entitled: Physical Sciences, Chemical Sciences, Materials and Materials Sciences, Radioisotopes, Reactors, Fuel Cycle, Radiological Safety and Protection, Electronics and Instrumentation, Engineering Services, Life Sciences and General. At the end of each chapter, a list of publications by the staff scientists in the corresponding subject field is given. The list includes published journal articles and technical reports, and papers presented at conferences, symposia etc. The report also covers the R and D activities of the outstation units of BARC, namely, Nuclear Research Laboratory, Srinagar; High Altitude Research Laboratory, Gulmarg; and Variable Energy Cyclotron Centre, Calcutta. BARC is also engaged in basic an applied research in frontier areas of science such as plasma and fusion physics, accelerators and lasers, high temperature superconductivity, condensed matter physics, high pressure physics, high resolution spectroscopy, chemical reaction dynamics and laser induced chemistry, electronics and robotics: radiation biology, and genetic engineering. Report is illustrated with a number of figures, graphs, and coloured pictures. (M.G.B.) figs., refs.

15963 (RISO-R–579) **Department of Energy Technology. Annual progress report 1 January - 31 December 1989.** Micheelsen, B.; Hoejerup, C.F. (eds.). Risoe National Lab., Roskilde (Denmark). Sep 1990. 42p. Order Number DE91625180. Source: OSTI; NTIS (US Sales Only); INIS.

The general development of the Department of Energy Technology at Risoe during 1989 is presented. This year was the last one for the department, as organizational changes at the beginning of 1990 caused a split-up of the sections of the department. The activities within the major fields are described in some detail and lists of staff and publications are included. (author) 10 ills., 29 refs.

15964 (UPTEC–90-110R) **Annual report 1989/1990.** Uppsala Univ. (Sweden). Inst. of Tech. Dec 1990. 60p. Order Number DE91626194. Source: OSTI; NTIS (US Sales Only); INIS.

This report gives a survey of the present research projects within the division of Solid state physics, Inst of Technology, Uppsala University and the progress that was made during the academic year 1989/90. The projects reported fall within the fields of magnetic properties and relaxation phenomena in spin glasses, high temperature superconductors, magnetism in itinerant systems, as well as optical selectivity of oxidized metals, multilayers and light scattering from inhomogenous systems. (author).

(CONF-9103133–2: 7. international conference on advanced science and technology, Argonne, IL (USA), 30 Mar 1991). Order Number DE91010599. Source: OSTI; NTIS; GPO Dep.

This paper presents an assessment of the current computer graphics and video technologies as they applied to the fields of visual presentation and computer animation, including a discussion of inherent incompatibilities between computer graphics and video systems. The near-term technology trend is directed towards the integration of sound, video and computer graphics into a multimedia, desktop presentation system. With the forthcoming High-Definition Television (HDTV) standard, it can be predicted that computer graphics and video will eventually be integrated to a desktop video system. Recent advances in technology development to achieve these goals are described. 3 tabs.

15966 (ANL/TM–486) **An Assessment of Scientific Computing Technology 1991-2001.** Mueller, C.J.; Amiot, L.W.; Canfield, T.R.; Caruthers, C.M.; Kuhfuss, T.C.; Lusk, E.L.; McMahon, R.J.; Malon, D.M.; Minkoff, M.; Moszur, F.M.; Padua, D.A.; Plaskacz, E.J.; Rowlan, J.; Stevens, R.L.; Volmer, J.A. Argonne National Lab., IL (USA). Feb 1991. 58p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. Order Number DE91009819. Source: OSTI; NTIS; GPO Dep.

This report discusses the future computing technology at Argonne National Laboratory. Some of the areas covered are: computational science needs: the grand challenges; scientific computing hardware; software: languages and tools; fortran and compilers for parallel computers; networking and communications; and scientific visualization.

15967 (CERN–90-06) **1989 CERN school of computing: Proceedings.** Verkerk, C. (ed.). European Organization for Nuclear Research, Geneva (Switzerland). 29 May 1990. 357p. (CONF-8908204–: CERN school of computing conference, Bad Herrenalb (Germany, F.R.), 20 Aug - 2 sep 1989). Order Number DE91625148. Source: OSTI; NTIS (US Sales Only); INIS.

These Proceedings contain written versions of lectures delivered at the 1989 CERN School of Computing and covering a variety of topics. Vector and parallel computing are the subjects of five papers: experience with vector processors in HEP; scientific computing with transputers; applications of large transputer arrays; neutral networks and neurocomputers; and Amdahl's scaling law. Data-acquisition and event reconstruction methods were covered in two series of lectures reproduced here: microprocessor-based data-acquisition systems for HERA experiments, and track and vertex fitting. Two speakers treated applications of expert systems: artificial intelligence and expert systems - applications in data acquisition, and application of diagnostic expert systems in the accelerator domain. Other lecture courses covered past and present computing practice: 30 years of computing at CERN, and information processing at the Aerospace Institute in the Federal Republic of Germany. Other papers cover the contents of lectures on: HEPnet, where we are and where we are going; ciphering algorithms; integrated circuit design for supercomputers; GaAs versus Si, theory and practice; and an introduction to operating systems. (orig.).

15968 (CONF-910648–1) **A first-principles generic methodology for representing the knowledge base of a process diagnostic expert system.** Reifman, J.; Briggs, L.L.; Wei, T.Y.C. Argonne National Lab., IL (USA). [1990]. 19p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. From 4. international conference on industrial and engineering applications of artificial intelligence and expert systems; Kauai, HI (USA); 2-5 Jun 1991. Order Number DE90017693. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper we present a methodology for identifying faulty component candidates of process malfunctions through basic physical principles of conservation, functional classification of components and information from the process schematics. The basic principles of macroscopic balance of mass, momentum and energy in thermal hydraulic control volumes are applied in a novel approach to incorporate deep knowledge into the knowledge base. Additional deep knowledge is incorporated through the functional classification of process components according to their influence in disturbing the macroscopic balance equations. Information from the process schematics is applied to identify the faulty component candidates after the type of imbalance in the control volumes is matched against the functional classification of the components. Except for the information from the process schematics, this approach is completely general and independent of the process under consideration. The use of basic first-principles, which are physically correct, and the process-independent architecture of the diagnosis procedure allow for the verification and validation of the system. A prototype process diagnosis expert system is developed and a test problem is presented to identify faulty component candidates in the presence of a single failure in a hypothetical balance of plant of a liquid metal nuclear reactor plant.

15969 (CONF-9104165–1) **Hybrid system for fault diagnosis using scanned input: A tutorial.** Ferrada, J.J. (Oak Ridge National Lab., TN (USA)); Osborne-Lee, I.W.; Grizzaffi, P.A. Oak Ridge National Lab., TN (USA). [1991]. 27p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From National American Institute of Chemical Engineers (AIChE) meeting; Houston, TX (USA); 7-11 Apr 1991. Order Number DE91009558. Source: OSTI; NTIS; GPO Dep.

It is well known that expert systems are useful in capturing expertise and applying knowledge to chemical engineering problems such as diagnosis, process control, process simulation, and process analysis. Traditionally, expert system applications are limited to knowledge domains that are heuristic and involve only simple mathematics. Neural networks, however, represent an emerging technology capable of rapid recognition of patterned behavior without regard to mathematical complexity. Although useful in problem identification, neutral networks are not very efficient in pointing to in-depth solutions and typically do not promote a profound understanding of the problem or the reasoning behind its solutions. This paper explores the potential for expanding the scope of expert system applications by combining expert systems with neural networks. Any computer system that is partly an expert system and partly a neural network can be called a hybrid system. This pairing is a natural one because where one system falls short the other excels. Imprecise (or even incomplete) data can submitted to a neutral network for classification. Once these data are classified, the results are not always as precise as need dictates. It is at this point that the expert system can be invoked to do what it does best: take definite and complete, but general, input and produce a definite and precise output. This paper presents a relatively new approach–one that expands the scope of artificial intelligence (AI) applications by combining expert systems and neural networks to form a hybrid system. A general methodology for developing hybrid systems is given. The methodology and merits of developing hybrid systems are illustrated through a case study.

15970 (CONF-9104179–1) **Development of a general-purpose, integrated knowledge capture and delivery system.** Roberts, A.G.; Freer, E.B. Oak Ridge National Lab., TN (USA). [1991]. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. From Petrochemical exposition; Houston, TX (USA); 9-11 Apr 1991. Order Number DE91009630. Source: OSTI; NTIS; GPO Dep.

KATIE (Knowledge-Based Assistant for Troubleshooting Industrial Equipment) was first conceived as a solution for maintenance problems. In the area of process control, maintenance technicians have become responsible for increasingly complicated equipment and an overwhelming amount of associated information. The sophisticated distributed control systems have proven to be such a drastic change for technicians that they are forced to rely on the engineer for troubleshooting guidance. Because it is difficult for a

knowledgeable engineer to be readily available for troubleshooting,maintenance personnel wish to capture the information provided by the engineer. The solution provided has two stages. First, a specific complicated system was chosen as a test case. An effort was made to gather all available system information in some form. Second, a method of capturing and delivering this collection of information was developed. Several features were desired for this knowledge capture/delivery system (KATIE). Creation of the knowledge base needed to be independent of the delivery system. The delivery path need to be as simple as possible for the technician, and the capture, or authoring, system could provide very sophisticated features. It was decided that KATIE should be as general as possible, not internalizing specifics about the first implementation. The knowledge bases created needed to be completely separate from KATIE needed to have a modular structure so that each type of information (rules, procedures, manuals, symptoms) could be encapsulated individually.

15971 (CONF-9106103–1) **Table-lookup algorithms for elementary functions and their error analysis.** Tang, Ping Tak Peter. Argonne National Lab., IL (USA). [1991]. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-31109-ENG-38. From 10. Institute of Electrical and Electronics Engineers (IEEE) symposium on computer arithmetic; Grenoble (France); 26-28 Jun 1991. Order Number DE91006047. Source: OSTI; NTIS; GPO Dep.

Table-lookup algorithms for calculating elementary functions offer superior speed and accuracy when compared with more traditional algorithms. With careful design, we show that it is feasible to implement table-lookup algorithms in hardware. Furthermore, we present a uniform approach to carry out tight error analysis for such implementations. 7 refs.

15972 (EGG–10617-5072) **Consistency of effective-bits calculations.** Tunnell, T. EG and G Energy Measurements, Inc., Los Alamos, NM (USA). Los Alamos Operations. 26 Nov 1990. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC08-88NV10617. (LAO–2732-2046). Order Number DE91010772. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This memorandum documents our preliminary work in assessing the accuracy of the SINEFIT code we use to compute effective bits. The accuracy of effective-bits calculations has become a feature that we want to determine in our digitizer testing project. In our study we are finding that the frequency instabilities of the signal generator may impair the ability of the sine-fitting algorithms to calculate effective bits accurately for large data sets at high frequencies. This does not yet appear to be a problem. However, as digitizer acquisition rates are increased, the current signal generators may not be adequate for determining effective bits. Finally, we show how we can use the consistency of the effective-bits calculations of other quantities (such as frequency) to estimate the accuracy in computing fixed-time-base errors. 3 refs.

15973 (EGG–10617-5083) **Expected errors computed from effective bits.** Tunnell, T. EG and G Energy Measurements, Inc., Los Alamos, NM (USA). 22 Oct 1990. 20p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC08-88NV10617. (LAO–2732-2020). Order Number DE91010826. Source: OSTI; NTIS; GPO Dep.

This memorandum has two purposes. The first is to review how we can calculate error bars for a given data set from the effective-bits measurements. The second is to outline how we can use the error bars to quantify expected errors in linear fits to data, integrated data, and power spectral densities computed from data. The expected errors for these quantities are calculated using standard statistics and probability techniques.

15974 (EGG-M–90462) **Successful neural network projects at the Idaho National Engineering Laboratory.** Cordes, G.A. EG and G Idaho, Inc., Idaho Falls, ID (USA). [1991]. 14p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC07-76ID01570. (CONF-9105157–2: 6. annual Goddard conference on space applications of artificial intelligence, Greenbelt, MD (USA), 13-15 May 1991). Order Number DE91010092. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents recent and current projects at the Idaho National Engineering Laboratory (INEL) that research and apply neural network technology. The projects are summarized in the paper and their direct application to space reactor power and propulsion systems activities is discussed. 9 refs., 10 figs., 3 tabs.

15975 (IAE–4670-16) **Techniques for realization of application programming systems based on the initial data macrogeneration.** Ostashenko, S.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR). Inst. Atomnoj Ehnergii. 1988. 55p. (In Russian). Order Number DE91625149. Source: OSTI; NTIS (US Sales Only); INIS.

The work shows that the employment of the external definitions for the initial values of data in FORTRAN (BLOCK DATA) makes it possible with certain programming techniques used to lift the restriction on memory without recource to the system functions. The initial values of data can be generated by a macroprocessor which at the same time becomes a problem-oriented input language processor. The realization of the language to describe the geometry of the GDL reactor assemblies is described. The MORTRAN language is proposed to be used as a part of the procedure. It is shown that the method allows one to perform the automated integration of the programs executed from modules on the basis of the problem-oriented input data of the supplement. The POL system to construct the transperable language processors of the selected class is described. 15 refs.

15976 (IAEA-NDS–79(Rev.1)) **Program PLOTC4. (Version 87-1). Plot evaluated data from the ENDF/B format and/or experimental data which is in a computation format.** Cullen, D.E. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jun 1987. 45p. Order Number DE91625150. Source: OSTI; NTIS (US Sales Only); INIS.

Experimental and evaluated nuclear reaction data are world-wide compiled in EXFOR format (see document IAEA-NDS-1) and ENDF format (see document IAEA-NDS-10), respectively. The computer program PLOTC4 described in the present document plots data from both formats; EXFOR data must be converted first to a "computation format" (see document IAEA-NDS-80). The program is available upon request costfree from the IAEA Nuclear Data Section. (author).

15977 (IAEA-NDS–81(Rev.0)) **COMPUTATION FORMAT computer codes X4TOC4 and PLOTC4. Implementing and Testing on a Personal Computer.** McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. May 1987. 21p. Order Number DE91625151. Source: OSTI; NTIS (US Sales Only); INIS.

This document describes the contents of the diskette containing the COMPUTATION FORMAT codes X4TOC4 and PLOTC4 by D.E. Cullen, and example data for use in implementing and testing these codes on a Personal Computer of the type IBM-PC/AT. Upon request the codes are available from the IAEA Nuclear Data Section, free of charge, on a single diskette. (author).

15978 (IAEA-NDS–82(Rev.0)) **Program PLOTTAB. (Version 87-2). General plotting program to plot any combination of continuous curves and/or discrete points (with associated error bars).** Cullen, D.E. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jun 1987. 48p. Order Number DE91625152. Source: OSTI; NTIS (US Sales Only); INIS.

This program is designed to be a general application independent plotting program to plot any combination of continuous curves and/or discrete points (with associated error bars) using user supplied titles and x and y axis labels and units. Using this method the program has no idea what data is being plotted and yet the user can produce any number of plots with each plot properly identified. This program is available upon request costfree from the IAEA Nuclear Data Section. (author).

15979 (IAEA-NDS–83(Rev.1)) **Implementing and testing program PLOTTAB.** Cullen, D.E.; McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jan 1988. 15p. Order Number DE91625153. Source: OSTI; NTIS (US Sales Only); INIS.

Enclosed is a description of the magnetic tape or floppy diskette containing the PLOTTAB code package. In addition detailed information is provided on implementation and testing of this code. See

part I for mainframe computers; part II for personal computers. These codes are documented in IAEA-NDS-82. (author).

15980 (IAEA-NDS–84(Rev.0)) **LINTAB, HEATER and PLOTTAB code package. Computer codes for model parameters and cross-section data. (Version 87-1).** Cullen, D.E.; Smith, J.J. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1987. 90p. Order Number DE91625154. Source: OSTI; NTIS (US Sales Only); INIS.

The code LINTAB produces linearly interpolable tables of cross-sections from nuclear or atomic models. The code HEATER calculates spectrum averaged reaction rates from linearly interpolable cross-section tables. The code PLOTTAB plots and compares various data tables. These codes were prepared as a support package for atomic and molecular data, but they are also applicable to nuclear and other data. Upon request, the programs are available costfree from the IAEA Nuclear Data Section. (author).

15981 (INIS-SU–235) **Simulation of physical processes: Scientific-technical collection.** Voprosy atomnoj nauki i tekhniki. 15983 (JAERI-M–90-201) **Development of the JFT-2M data analysis software system on the mainframe computer.** Matsuda, Toshiaki (Japan Atomic Energy Research Inst., Naka, Ibaraki (Japan). Naka Fusion Research Establishment); Amagai, Akira; Suda, Shuji; Maemura, Katsumi; Hata, Ken-ichiro. Japan Atomic Energy Research Inst., Tokyo (Japan). Nov 1990. 30p. (In Japanese). Order Number DE91767875. Source: OSTI; NTIS (US Sales Only); INIS.

We developed software system on the FACOM mainframe computer to analyze JFT-2M experimental data archived by JFT-2M data acquisition system. Then we can reduce and distribute the CPU load of the data acquisition system. And we can analyze JFT-2M experimental data by using complicated computational code with raw data, such as equilibrium calculation and transport analysis, and useful software package like SAS statistic package on the mainframe. (author).

15984 (LA–11958-MS) **Central American information system for energy planning.** Fonseca, M.G.; Lyon, P.C.; Heskett, J.C. Los Alamos National Lab., NM (USA). Apr 1991. 78p. (In English, Spanish). Sponsored by Agency for International Development, Washington, DC (USA). DOE Contract W-7405-ENG-36. Order Number DE91010180. Source: OSTI; NTIS; GPO Dep.

SICAPE (Sistema de Information Centroamericano para Planificacion Energetica) is an expandable information system designed for energy planning. Its objective is to satisfy ongoing information requirements by means of a menu driver operational environment. SICAPE is as easily used by the novice computer user as those with more experience. Moreover, the system is capable of evolving concurrently with future requirements of the individual country. The expansion is accomplished by menu restructuring as data and user requirements change. The new menu configurations require no programming effort. The use and modification of SICAPE are separate menu-driven processes that allow for rapid data query, minimal training, and effortless continued growth. SICAPE's data is organized by country or region. Information is available in the following areas: energy balance, macro economics, electricity generation capacity, and electricity and petroleum product pricing. (JF)

15985 (LA-UR–90-4168) **Use of a genetic algorithm to analyze robust stability problems.** Murdock, T.M.; Schmitendorf, W.E.; Forrest, S. Los Alamos National Lab., NM (USA). [1990]. 17p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910638–3: 1991 American control conference, Boston, MA (USA), 26 Jun 1991). Order Number DE91005895. Source: OSTI; NTIS; GPO Dep.

This note resents a genetic algorithm technique for testing the stability of a characteristic polynomial whose coefficients are functions of unknown but bounded parameters. This technique is fast and can handle a large number of parametric uncertainties. We also use this method to determine robust stability margins for uncertain polynomials. Several benchmark examples are included to illustrate the two uses of the algorithm. 27 refs., 4 figs.

15986 (LA-UR–91-126) **Applications of neural networks to process control and modeling.** Barnes, C.W.; Brown, S.K.; Flake, G.W.; Jones, R.D.; O'Rourke, M.K.; Lee, Y.C. Los Alamos National Lab., NM (USA). [1991]. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9106117–1: International conference on artificial neural networks, Helsinki (Finland), 24-28 Jun 1991). Order Number DE91007389. Source: OSTI; NTIS; GPO Dep.

Modeling and control of physical processes are universal parts of modern life, from control of chemical plants to riding a bicycle. Often, an effective model of the process is not known so that traditional control theory is of little use. If a process can be represented by a set of a data which captures it behavior over a range of parameter settings, a neural net can inductively model the process and form the basis of an optimization procedure. We present a neural network architecture which is particularly effective in process modeling and control. We discuss its effectiveness in several application areas as well as some of the non-ideal characteristics present in real control problems which effect the form and style of the network architecture and learning algorithm. 8 refs., 6 figs.

15987 (LA-UR–91-820) **Security evaluation of the NWCNET WBCN Gateway software.** Harris, L.S.; Bailey, D.J.; Strittmatter, R.B. Los Alamos National Lab., NM (USA). [1991]. 17p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9105126–2: 14. DOE computer security group conference, Concord, CA (USA), 7-9 May 1991). Order Number DE91009943. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This paper reviews the procedures and methodology associated with the security evaluation of the Nuclear Weapons Complex Network (NWCnet) WBCN Gateway software. NWCnet, built by the DOE Albuquerque Operations Office and the Computer Integrated Manufacturing Program Office, was an early attempt by the DOE to build a complex-wide network for classified data processing. The development of NWCnet broke new ground in DOE computer security management and identified several complex security issues for which new security design and planning techniques were developed. The requirement for a comprehensive security evaluation of each NWCnet service component was established by the CIM Program Office in conjunction with DOE Office of Safeguards and Security. The goals of the activity were to establish the network's overall security and to provide a technical basis on which to certify and accredit the network. In the process of designing and evaluating the WBCN Gateway software, significant knowledge was gained regarding the function of the software and the security evaluation process. Not only the did the evaluators learn how to test software in the face of continual change, but they also began to understand how to evaluate the security of a network. The function of this paper is to communicate the lessons learned from the evaluation activities. It focuses on the problems (and solutions) encountered in testing a long-term project undergoing continual, major change.

15988 (LA-UR–91-896) **Information dynamics of self-programmable matter.** Knudsen, C.; Feldberg, R.; Rasmussen, S. Los Alamos National Lab., NM (USA). [1990]. 24p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9008198–1: Complex dynamics and biological evolution conference, Middlefart (Denmark), 6-10 Aug 1990). Order Number DE91009954. Source: OSTI; NTIS; GPO Dep.

Using the simple observation that programs are identical to data, programs alter data, and thus programs alter programs, the authors have constructed a self-programming system based on a parallel von Neumann architecture. This system has the same fundamental

property as living systems have: the ability to evolve new properties. They demonstrate how this constructive dynamical system is able to develop complex cooperative structures with adaptive responses to external perturbations. The experiments with this system are discussed with special emphasis on the relation between information theoretical measures (entropy and mutual information functions) and on the emergence of complex functional properties. Decay and scaling of long-range correlations are studied by calculation of mutual information functions. 10 refs., 9 figs., 2 tabs.

15989 (LA-UR-91-903) **A neural network hybrid expert system.** Goulding, J.R. (Portland State Univ., OR (USA). Dept. of Mechanical Engineering). Los Alamos National Lab., NM (USA). [1991]. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-9103136-3: 5. national conference on undergraduate research, Pasadena, CA (USA), 21-23 Mar 1991). Order Number DE91009956. Source: OSTI; NTIS; GPO Dep.

When knowledge-based expert rules, equations, and proprietary languages extend Computer Aided Design and Computer Aided Manufacturing (CAD—CAM) software, previously designed mechanisms can be scaled to satisfy new design requirements in the shortest time. However, embedded design alternatives needed by design engineers during the product conception and rework stages are lacking, and an operator is required who has a thorough understanding of the intended design and the how-to expertise needed to create and optimize the mechanisms. By applying neural network technology to build an expert system, a robust design supervisor system emerged which automated the embedded intellectual operations (e.g. questioning, identifying, selecting, and coordinating the design process) to (1) select the best mechanisms necessary to design a power transmission gearbox from proven solutions; (2) aid the inexperienced operator in developing complex design solutions; and (3) provide design alternatives which add back-to-the-drawing board capabilities to knowledge-based mechanical CAD/CAM software programs. 15 refs., 2 figs.

15990 (LA-UR-91-992) **Simultaneous stabilization using genetic algorithms.** Benson, R.W. (California Univ., Irvine, CA (USA). Dept. of Mechanical Engineering); Schmitendorf, W.E. Los Alamos National Lab., NM (USA). [1991]. 20p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-36. (CONF-910638-4: 1991 American control conference, Boston, MA (USA), 26 Jun 1991). Order Number DE91009967. Source: OSTI; NTIS; GPO Dep.

This paper considers the problem of simultaneously stabilizing a set of plants using full state feedback. The problem is converted to a simple optimization problem which is solved by a genetic algorithm. Several examples demonstrate the utility of this method. 14 refs., 8 figs.

15991 (LUTFD2-TFRT-3206-1-75-90) **Automatic control LTH - Past, present and future.** Wittenmark, B.; Aastroem, K.J. Lund Univ. (Sweden). Dept. of Automatic Control. Feb 1990. 76p. Order Number DE91763546. Source: OSTI; NTIS (US Sales Only).

This report is a compilation of the activities at the Department of Automatic Control during the academic years 84/85-88/89. The report is written in connection with the evaluation of the Lund Institute of Technology in the spring 1990. The report contains short descriptions of different activities at the department such as personnel, funding, graduate studies, and contacts. The main part of the report is appendices giving listing of all publications of members of the department. (authors).

15992 (ORNL/TM-11786) **Modeling speedup in parallel sparse matrix factorization.** Ostrouchov, L.S. (Tennessee Univ., Knoxville, TN (USA). Dept. of Computer Science); Heath, M.T.; Romine, C.H. Oak Ridge National Lab., TN (USA). Dec 1990. 28p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OR21400. Order Number DE91010215. Source: OSTI; NTIS; GPO Dep.

This paper is an attempt to explain the observed performance of sparse matrix factorization algorithms on parallel computers. In particular, we examine whether the disappointing performance of these algorithms is due to insufficient parallelism in the problem or to the architectural characteristics of existing parallel computers. Through a series of theoretical models of increasing realism, we first determine upper and lower bounds on the speedup that can be expected in practice for this problem, and end with a parameterized model that is capable of reproducing the full range of behavior within these bounds, including the speedups actually observed in practice. This model suggests that the current limits on speedup in sparse factorization are due to poor communication performance of the present generation of parallel computer architectures rather than to a lack of parallelism in the problem. 29 refs., 11 figs., 2 tabs.

15993 (PNL-SA-19189) **Interactive image and text processing for nuclear treaty support.** Petrie, G.M.; Rohay, A.C.; Wukelic, G.E.; Foote, H.P. Pacific Northwest Lab., Richland, WA (USA). Mar 1991. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-76RL01830. (CONF-9103139-1: DOE/LLNL information management systems for nuclear test treaty verification symposium, Lake Tahoe, CA (USA), 5-7 Mar 1991). Order Number DE91009126. Source: OSTI; NTIS; INIS; GPO Dep.

The report covers experimentation with integrating a wide range of technologies and data sets with the principal goal of supporting treaty related activity. Scientists attempting to apply computer analysis tools to their problem sets often face several practical problems beyond the purely scientific ones. These include (1) the need to be proficient in several different computer operating systems with diverse characteristics, (2) the time wasted in dealing with software issues rather than problem solving and (3) the time required to master computer application software, which limits time available to explore new analysis techniques. In an attempt to mitigate these problems, the Pacific Northwest Laboratory (PNL) is developing a spatial-based data fusion system. Selected features of this system, involving advanced image and text processing schemes, have applicability to both technical and non-technical functions associated with increasing treaty-related information management requirements.

15994 (SAND-90-2231C) **Raybot: A practical implementation of a hierarchical control system for telerobotic land vehicles.** Byrne, R. Sandia National Labs., Albuquerque, NM (USA). [1990]. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. (CONF-910638-1: 1991 American control conference, Boston, MA (USA), 26 Jun 1991). Order Number DE90017029. Source: OSTI; NTIS; GPO Dep.

A hierarchical control architecture for telerobotic vehicles intended to yield a modular, flexible, and easily expanded control system is presented. This architecture is proposed for applications where simple teleoperation is required but where additional capabilities might be quickly added without major changes to the control system. Similarities to the NASREM architecture are noted. Results are given from hardware implementation of the control system on a telerobotic vehicle, Raybot, at Sandia National Laboratories.

15995 (SLAC-PUB-4561-Rev.) **Introduction to human factors: Revision.** Winter, J.M. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Mar 1991. 11p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00515. (CONF-8808317-1-Rev.: SHARE '71: Systems for heat and radiation energy human factors project, New York, NY (USA), 14-19 Aug 1988). Order Number DE91010289. Source: OSTI; NTIS; GPO Dep.

There is much to be done in Human Factors. First, I'm going to give a brief overview of the field. I'll give some background on human factors, talk about what the nature of the problem is, what the costs are, how they can be alleviated, and why we don't just run out and fix them. Second, Paul Hoffman will discuss highlights from current research and some elements of the business case. Finally, Tamara Sturak, Manager of the Human Factors Project, will talk about activities of the Project.

15996 (UCRL-ID-106621) **Travel from a supercomputer to killer micros.** Werner, N.E. Lawrence Livermore National Lab., CA (USA). Mar 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010430. Source: OSTI; NTIS; GPO Dep.

I describe my effort to convert a Fortran application that runs on a parallel supercomputer (Cray Y/MP) to run on a set of BBN

TC2000 killer micros. I used both shared memory parallel processing options available at MPCI for the BBN TC2000, the Parallel Fortran Preprocessor (PFP) and the Uniform System extended Fortran compiler (US). I describe how I used the BBN Xtra programming tools for analysis and debugging during this conversion process. My ultimate goal for this hands on experiment was to gain insight into the type of tools that might be helpful for porting existing programs from a supercomputer environment to a killer micro environment. 5 refs., 9 figs.

15997 (UCRL-ID–106965) **Report of the ERSUG Charging and Scheduling Algorithms Working Group.** Bathke, C.; Anderson, D.; Jette, M.; Mirin, A.; Potter, G. Lawrence Livermore National Lab., CA (USA). 28 Mar 1991. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. Order Number DE91010907. Source: OSTI; NTIS; GPO Dep.

The Charging and Scheduling Algorithms Working Group of ERSUG was formed in February 1990 in response to a request from Tom Kitchens and Ralph Lewis. This request came about because of complaints to the effect that interactive jobs were obtaining slow system response, large production jobs were getting poor turnaround, and large codes were being assessed too high a memory charge. The Group was asked to take a fresh look at the charging and scheduling algorithms at NERSC and to recommend how jobs experiencing difficulty executing could be accommodated.

15998 (UCRL-JC–104036) **Sisal City and Xcbi: Reference manual: Version 1.0.** Uejio, J.Y. Lawrence Livermore National Lab., CA (USA). May 1990. 29p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9006328–1: Asilomar conference on circuits, systems, and computers, Pacific Grove, CA (USA), 5-8 Jun 1990). Order Number DE91009751. Source: OSTI; NTIS; GPO Dep.

This manual describes Sisal City, the programming environment for Sisal, and xcbi, the X window based configurable user interface. Sisal City is designed to support X window based on non-X window based (command line) programming tools. The command line tools, such as compilers and debuggers, are intergrated into Sisal City by an external user interface called xcbi, X Configurable Button Interface. Xcbi provides a button, command line, and pull-down menu user interface; inter-process communications; and a pseudo tty to connect to the command line based UNIX program. This manual is written for programmers wishing to add tools to Sisal City. The first chapter discusses briefly how to use Sisal City. The next sections describe the features and commands of xcbi and describe how to create new user interfaces.

15999 (UCRL-JC–105185) **Shapes and textures for rendering coral.** Max, N.L. (Lawrence Livermore National Lab., CA (USA)); Wyvill, G. Lawrence Livermore National Lab., CA (USA). 18 Oct 1990. 13p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9106115–1: CG international conference, Cambridge, MA (USA), 27-29 Jun 1991). Order Number DE91007123. Source: OSTI; NTIS; GPO Dep.

A growth algorithm has been developed to build coral shapes out of a tree of spheres. A volume density defined by the spheres is contoured to give a "soft object." The resulting contour surfaces are rendered by ray tracing, using a generalized volume texture to produce shading and "bump mapped" normal perturbations. 16 refs., 8 figs.

16000 (UCRL-JC–105515) **Using the graphical kernel system in scientific computing.** Fong, Kirby W. Lawrence Livermore National Lab., CA (USA). 25 Jan 1991. 5p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9104173–2: NCGA '91 conference and exposition, Chicago, IL (USA), 22-25 Apr 1991). Order Number DE91010462. Source: OSTI; NTIS; GPO Dep.

The Graphical Kernel System (GKS) originated as an application interface to two dimensional graphics when it first became an international and US standard in the 1980's. The National Energy Research Supercomputer Center (NERSC) of the Lawrence Livermore National Laboratory provides supercomputing services including graphical output to scientists and engineers performing research for the US Department of Energy's Office of Energy Research. NERSC adopted GKS and has been using it successfully for some of its graphics applications. This article reviews the context in which GKS is effective.

16001 (UCRL-JC–106647) **Scientific visualization software for your PC: Free and available now!.** Greenly, G.D. Jr. Lawrence Livermore National Lab., CA (USA). Mar 1991. 19p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-910659–11: 84. annual meeting and exhibition of the Air and Waste Management Association (AWMA), Vancouver (Canada), 16-21 Jun 1991). Order Number DE91010156. Source: OSTI; NTIS; GPO Dep.

Super computers provide todays scientist the compute power to easily handle very large numerical models. The National Center for Supercomputing Applications (NCSA), at the University of Illinois at Urbana-Champaign, has developed a suite of new public domain software for the visualization of scientific data on personal computers (PC). Hierarchical Data Format (HDF), a flexible file format, designed at NCSA for sharing 2-D graphical and floating point data arrays among different programs and machines, is the core capability of this free software. HDF allows the researcher to store raster images, their dimensions, color tables, annotations, and units of measure all in the same file. HDF output files can be viewed on a PC using this suite of software applications. This paper discusses the NCSA software, how it can be used with the Mackintosh II family of computers, with their superior color graphics capability, and how the software can be obtained free of charge. Information regarding use of the software with other PCs and workstations is also presented. 7 refs., 17 figs.

16002 (WHC-SA–1006) **Use of personal computers in performing a linear modal analysis of a large finite-element model.** Wagenblast, G.R.; Northey, M.D. Westinghouse Hanford Co., Richland, WA (USA). Mar 1991. 8p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC06-87RL10930. (CONF-910602–23: American Society of Mechanical Engineers (ASME) pressure vessels and piping conference, San Diego, CA (USA), 23-27 Jun 1991). Order Number DE91010112. Source: OSTI; NTIS; GPO Dep.

This paper presents the use of personal computers in performing a dynamic frequency analysis of a large (2801 degrees of freedom) finite-element model. Large model linear time history dynamic evaluations of safety related structures were previously restricted to mainframe computers using direct integration analysis methods. This restriction was a result of the limited memory and speed of personal computers. With the advances in memory capacity and speed of the personal computers, large finite-element problems now can be solved in the office in a timely and cost effective manner. Presented in three sections, this paper describes the procedure used to perform the dynamic frequency analysis of the large (2801 degrees of freedom) finite-element model on a personal computer. Section 2.0 describes the structure and the finite-element model that was developed to represent the structure for use in the dynamic evaluation. Section 3.0 addresses the hardware and software used to perform the evaluation and the optimization of the hardware and software operating configuration to minimize the time required to perform the analysis. Section 4.0 explains the analysis techniques used to reduce the problem to a size compatible with the hardware and software memory capacity and configuration.

16003 (IAEA-NDS–0(Rev.90/9)) **Index to the IAEA-NDS-Documentation Series.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 17p. Order Number DE91625142. Source: OSTI; NTIS (US Sales Only); INIS.

This index lists the current versions of the IAEA-NDS-documents which summarize contents and formats of nuclear data libraries available from the IAEA Nuclear Data Section. (author).

16004 (IAEA-NDS–1(Rev.5)) **Short guide to EXFOR.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jun 1986. 24p. Order Number DE91625127. Source: OSTI; NTIS (US Sales Only); INIS.

EXFOR is a computerized system for the storage, retrieval and international exchange of experimental nuclear reaction data induced by neutrons, photons, charged particles and heavy ions. The data file in an agreed "EXchange FORmat" is produced and maintained by a network of national and regional nuclear data centers. The present document gives an introduction to EXFOR and describes the products available from the IAEA Nuclear Data Section. Data retrievals in different output formats are available costfree upon request. (author).

16005 (IAEA-NDS–29(Rev.2)) **ENDF utility codes version 6.4 for ENDF-5 and ENDF-6: Description and operating instructions.** McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1988. 40p. Order Number DE91625135. Source: OSTI; NTIS (US Sales Only); INIS.

Description and operating instructions are given for a package of utility codes operating on evaluated nuclear data files in the formats ENDF-5 and ENDF-6. Included are the data checking codes CHECKER, FIZCON, PSYCHE; the code INTER for retrieving thermal cross-sections and some other data; graphical plotting codes PLOTEF, GRABLIB, VERSAT; and the file maintenance and retrieval codes LISTEF, SETMDC, GETMAT, STANEF. This program package can be obtained on magnetic tape or floppy diskette, free of charge, from the IAEA Nuclear Data Section. (author).

16006 (IAEA-NDS–65(Rev.0)) **ENDF/B-5 modifications 1986.** McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. May 1986. 223p. Order Number DE91625136. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the modifications made to the ENDF/B-5 evaluated neutron data files in 1986. The new versions of the files are available from the IAEA Nuclear Data Section upon request, costfree, on magnetic tape. (author).

16007 (IAEA-NDS–69(Rev.0)) **ENDF/B Pre-Processing Codes: Implementing and testing on a Personal Computer.** McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. May 1987. 33p. Order Number DE91625137. Source: OSTI; NTIS (US Sales Only); INIS.

This document describes the contents of the diskettes containing the ENDF/B Pre-Processing codes by D.E. Cullen, and example data for use in implementing and testing these codes on a Personal Computer of the type IBM-PC/AT. Upon request the codes are available from the IAEA Nuclear Data Section, free of charge, on a series of 7 diskettes. (author).

16008 (IAEA-NDS–70(Rev.0)) **ENDFIS86/8. Index to the major evaluated neutron data libraries available from the IAEA Nuclear Data Section.** McLaughlin, P.K. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Aug 1986. 89p. Order Number DE91625138. Source: OSTI; NTIS (US Sales Only); INIS.

The major evaluated neutron data libraries in the formats of ENDF/B, UKNDL or KEDAK are indexed by element and isotope. Upon request, all data libraries or selective retrievals from them are available, costfree, from the IAEA Nuclear Data Section. (author).

16009 (IAEA-NDS–76(Rev.3)) **ENDF-6 Formats Manual: Version of July 1990.** Rose, P.F. (National Nuclear Data Center, Upton, NY (USA)); Dunford, C.L. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1990. 3p. Order Number DE91625139. Source: OSTI; NTIS (US Sales Only); INIS.

ENDF-6 is the international computer file format for evaluated nuclear data. In contrast to the earlier versions (ENDF-4 ENDF-5) the new version ENDF-6 has been designed not only for neutron reaction data but also for photo-nuclear and charged-particle nuclear reaction data. This document gives a detailed description of the formats and procedures adopted for ENDF-6. (author).

16010 (IAEA-NDS–78(Rev.0)) **Codes CONV45 and CONV56 for a PC.** Rose, P.F. (Brookhaven National Lab., Upton, NY (USA)). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Mar 1988. 12p. Order Number DE91625140. Source: OSTI; NTIS (US Sales Only); INIS.

Implemented on PC by V. Goulo.

The codes CONV45 and CONV56 convert data files from ENDF/B-4 to ENDF/B-5 and from ENDF/B-5 to ENDF/B-6 format respectively. The codes which were received from US National Nuclear Data Center were implemented at the IAEA Nuclear Data Section for use on personal computers. (author). 2 refs, 3 tabs.

16011 (IAEA-NDS–85(Rev.0)) **Implementing and Testing the LINTAB, HEATER and PLOTTAB code package.** Cullen, D.E.; Smith, J.J. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1987. 4p. Order Number DE91625141. Source: OSTI; NTIS (US Sales Only); INIS.

Enclosed is a description of the magnetic tape or floppy diskette containing the LINTAB, HEATER and PLOTTAB code package. In addition detailed information is provided on implementation and testing of these codes. These codes are documented in IAEA-NDS-84. (author).

16012 (IAEA-NDS–100(Rev.3)) **ENDF/B-6. The U.S. Evaluated Nuclear Data Library for Neutron Reaction Data: Summary of contents.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 25p. Order Number DE91625128. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of the general-purpose neutron data file on ENDF/B-6, the U.S. Evaluated Nuclear Data Library. The entire library or retrievals of selected materials are available on magnetic tape from the IAEA Nuclear Data Section free of charge. (author).

16013 (IAEA-NDS–103(Rev.89/1)) **EXFOR Manual. Center-to-Center Exchange Format. Version 89-1.** McLane, V. (Brookhaven National Lab., Upton NY (USA). National Nuclear Data Center). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1989. 287p. Order Number DE91626179. Source: OSTI; NTIS (US Sales Only); INIS.

EXFOR is the agreed exchange format for the transmission of nuclear reaction data between national and international nuclear data centers for the benefit of nuclear data users in all countries. EXFOR is a database with several million data records containing the world's experimental nuclear reaction data induced by neutrons, photons or charged particles. Data retrievals can be obtained from the IAEA Nuclear Data Section (NDS) or from one of the co-operating data centers whose names and addresses can be found inside the manual. Their contributions and co-operative efforts are gratefully acknowledged. (author). Refs.

16014 (IAEA-NDS–107(Rev.4)) **Index to BROND, ENDF/B-6, JEF-1, JENDL-3.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 13p. Order Number DE91625129. Source: OSTI; NTIS (US Sales Only); INIS.

This document contains a brief index to the three main data libraries for evaluated neutron reaction data, including BROND from USSR, ENDF/B-6 from USA, JEF-1 from OECD/NEA and JENDL-3 from Japan. (author).

16015 (IAEA-NDS–109(Rev.90/2)) **CINDA Manual: Maintained by the NEA Data Bank on behalf of the co-operating Nuclear Reaction Data Centers.** Webster, S. (ed.). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Feb 1990. 86p. Order Number DE91625130. Source: OSTI; NTIS (US Sales Only); INIS.

CINDA is a computerized index to the literature and numeric data files of microscopic neutron cross-sections and related data such as angular distributions, resonance parameters, fission-product data, etc. Retrievals from the CINDA file are available from the IAEA Nuclear Data Section or from the co-operating Nuclear Reaction Data Centers. CINDA books are regularly published by IAEA. This document contains the rules to be observed by the CINDA indexers when preparing the CINDA input. (author).

16016 (IAEA-NDS–110(Rev.2)) **JENDL-3. The Japanese Evaluated Nuclear Data Library: Summary of contents.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria).

Nuclear Data Section. Oct 1990. 20p. Order Number DE91625131. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the contents of JENDL-3, the Japanese evaluated data library for neutron nuclear data, released in 1989. The entire library or retrievals of selected materials are available on magnetic tape from the IAEA Nuclear Data Section free of charge. (author). 2 tabs.

16017 (IAEA-NDS–113(Rev.0)) **ENDF/B-6 High-Energy Data File: Summary.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Mar 1990. 1p. Order Number DE91625132. Source: OSTI; NTIS (US Sales Only); INIS.

This document summarizes the high-energy subfile of ENDF/B-6, the U.S. Evaluated Nuclear Data Library. At present it contains neutron and proton reaction data up to 1 GeV for 26-Fe-56. The file is available on magnetic tape or on diskette from the IAEA Nuclear Data Section free of charge. (author).

16018 (IAEA-NDS–119(Rev.0)) **NJOY. A comprehensive system for the processing of ENDF formatted nuclear data.** Muir, D.W. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Jul 1990. 8p. Order Number DE91625133. Source: OSTI; NTIS (US Sales Only); INIS.

An introduction to the program system NJOY is given which processes data files of evaluated neutron nuclear data coded in ENDF format. NJOY is primarily used for neutron and photon transport calculations for nuclear power reactor design. The NJOY code is not available from the IAEA Nuclear Data Section but may be obtained from the Reactor Shielding Information Center, Oak Ridge, USA. (author). 10 refs, 1 fig.

16019 (IAEA-NDS–122(Rev.0)) **JEF-1 Radioactive Decay Data: Brief summary of contents.** Lemmel, H.D. International Atomic Energy Agency, Vienna (Austria). Nuclear Data Section. Sep 1990. 1p. Order Number DE91625134. Source: OSTI; NTIS (US Sales Only); INIS.

This document gives a brief documentation of the JEF-1 Radioactive Decay Data library which is available from the IAEA Nuclear Data Section on magnetic tape, free of charge. (author).

16020 (INIS-SU–234, pp. 78-79) **Representation of the BAS constant system in the ENDL format.** Cherepanova, E.I.; Shmakov, V.M. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow (USSR); Tsentral'nyj Nauchno-Issledovatel'skij Inst. Informatsii i Tekhniko-Ehkonomicheskikh Issledovanij po Atomnoj Nauke i Tekhnike, Moscow (USSR). 1989. 82p. (In Russian). In *Simulation of physical processes: Scientific-technical collection.* Order Number DE91003090. Source: OSTI; NTIS (US Sales Only); INIS.

Data representation from the PROM library in the ENDL format described. New types of data in comparison with the official ENDL format characterizing the multiplying properties of elements and the total kinetic energy release are introduced. A new description of energy distribution of secondary particles as two-dimensional tables with equiprobable representation of intermediate tables is introduced. 5 refs.; 1 tab.

16021 (JAERI-M–90-218) **Information retrieval system of nuclear power plant database (PPD) user's guide.** Izumi, Fumio (Nuclear Energy Data Center, Tokai, Ibaraki (Japan)); Horikami, Kunihiko; Kobayashi, Kensuke. Japan Atomic Energy Research Inst., Tokyo (Japan). Dec 1990. 73p. (In Japanese). Order Number DE91767905. Source: OSTI; NTIS (US Sales Only); INIS.

A nuclear power plant database (PPD) and its retrieval system have been developed. The database involves a large number of safety design data of nuclear power plants, operating and planned in Japan. The information stored in the database can be retrieved at high speed, whenever they are needed, by use of the retrieval system. The report is a user's manual of the system to access the database utilizing a display unit of the JAERI computer network system. (author).

16022 (K/CSD/TM–97) **Active Design Database (ADDB) user's manual.** Schwarz, R.L.; Nations, J.A. (eds.); Rosser, J.H. Oak Ridge K-25 Site, TN (USA). Feb 1991. 27p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OT21400. Order Number DE91010431. Source: OSTI; NTIS; GPO Dep.

This manual is a guide to the Active Design Database (ADDB) on the Martin Marietta Energy Systems, Inc., IBM 3084 unclassified computer. The ADDB is an index to all CADAM models in the unclassified CADAM database and provides query and report capabilities. Section 2.0 of this manual presents an overview of the ADDB, describing the system's purpose; the functions it performs; hardware, software, and security requirements; and help and error functions. Section 3.0 describes how to access the system and how to operate the system functions using Database 2 (DB2), Time Sharing Option (TSO), and Interactive System Productivity Facility (ISPF) features employed by this system. Appendix A contains a dictionary of data elements maintained by the system. The data values are collected from the unclassified CADAM database. Appendix B provides a printout of the system help and error screens.

16023 (K/DSRD–461) **Security aspects of database management systems.** Hicks, S.E.; Evans, K.C. Oak Ridge K-25 Site, TN (USA). 8 Mar 1991. 122p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC05-84OT21400. Order Number DE91010677. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Research and development in the area of database management technology began in the 1960s. From this work, the first commercially available data base management system (DBMS) were introduced. These initial DBMSs used the hierarchical and networked data models discussed in section 1.1.1.5.2 and 1.1.1.5.3. of this report. During the 1970s, research focused on the relational data model. Section 1.1.1.5.1 describes this model. Relational database management systems became commercially available in the early 1980s and remain the most widely used type of DBMS today. Emerging research is taking advantage of advances in artificial intelligence and programming languages. One result has been the advent of the object-oriented data model, discussed in section 1.1.1.5.4. Due to the extensive dependence on database management systems by the majority of society, data security has become a growing concern. The purpose of this report is to provide an information baseline for the Department of Energy (DOE) on the current DBMS security technology. The document begins with an overview of DBMS use and architectures, followed by a summary of security concepts. The remaining sections discuss DBMS security issues, research and vendor efforts, standards activities, and DOE DBMS security needs. Because the vast majority of database security research in focused on relational DBMSs, the discussions in this report focus on the relational database model.

16024 (SAND–90-2513) **HEART handbook for guest editors.** Vittitoe, C.N. Sandia National Labs., Albuquerque, NM (USA). Feb 1991. 42p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC04-76DP00789. Order Number DE91009727. Source: OSTI; NTIS; GPO Dep.

This handbook outlines the basic job of guest editors for the HEART Conference proceedings, published by the DoD Nuclear Information and Analysis Center in the Journal of Radiation Effects, Research and Engineering. Suggestions are offered for procedures to aid the editors, authors, reviewers, and the publisher in assuring that the journal communicates clearly, concisely, and honestly.

16025 (SLAC-PUB–5450) **The Cheetah Data Management System.** Kunz, P.F. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)); Word, G.B. Stanford Linear Accelerator Center, Menlo Park, CA (USA). Mar 1991. 7p. Sponsored by USDOE, Washington, DC (USA). DOE Contract AC03-76SF00515. (CONF-9011192–1: 14. Italian National Institute of Nuclear Physics (INFN) workshop: data structures for particle physics experiments, Erice (Italy), 11-18 Nov 1990). Order Number DE91010290. Source: OSTI; NTIS; GPO Dep.

Cheetah is a data management system based on the C programming language. The premise of Cheetah is that the 'banks' of FORTRAN based systems should be 'structures' as defined by the C language. Cheetah is a system to mange these structures, while preserving the use of the C language in its native form. For C structures managed by Cheetah, the user can use Cheetah utilities such as reading and writing, in a machine independent form, both binary and text files to disk or over a network. Files written by Cheetah also contain a dictionary describing in detail the data contained in

the file. Such information is intended to be used by interactive programs for presenting the contents of the file. Such information is intended to be used by interactive programs for presenting the contents of file. Cheetah has been ported to many different operating systems with no operating system dependent switches.

16026 (UCRL-JC–105865) **The intelligent database: Using INGRES to manage the external analysis of your data.** Dougan, A.D.; Willes, E.H. Jr.; Buckley, W.M.; Delucchi, A.; Manatt, D.R. Lawrence Livermore National Lab., CA (USA). 6 Mar 1991. 12p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9105160–1: North America INGRES Users Association annual (NAIUA) meeting, San Jose, CA (USA), 19-23 May 1991). Order Number DE91010465. Source: OSTI; NTIS; GPO Dep.

We have developed an application that uses a database to store the methods and rules for our analysis. Our rules are in the form of equations that are generated by a user and subject to frequent editing. We send the equations to a spreadsheet for calculation. When the results are defined as "best," the answers are sent back to the database for storage. Our ad hoc methodology is thus stored with the input data and results for better quality assurance and documentation. 2 refs., 6 figs.

16027 (UCRL-JC–106617) **Applications: Still the DBA's security blanket.** Buckley, W.M. Lawrence Livermore National Lab., CA (USA). 6 Mar 1991. 10p. Sponsored by USDOE, Washington, DC (USA). DOE Contract W-7405-ENG-48. (CONF-9105160–2: North America INGRES Users Association annual (NAIUA) meeting, San Jose, CA (USA), 19-23 May 1991). Order Number DE91010473. Source: OSTI; NTIS; GPO Dep.

With Release 6.3 of INGRES, several new capabilities were added which are of interest to the DBA who wishes to control and restrict access to the database. These are groups, roles, rules and resource controls. There are aspects to each of these capabilities that suggest that applications are still the most effective means for assuring the security of data in INGRES tables. Casual usage of these new INGRES features could leave the DBA in situations of wondering "What happened and who did it?" In some cases, INGRES will ignore the controls placed with these mechanisms. This paper will discuss caveats for usage of these new features. A wish list of related improvements will be presented as a conclusion. Security here is defined as the protection against unauthorized or accidental modification, deletion, access or denial of data. 8 refs., 1 fig., 1 tab.

9904 Law

16028 (IAEA-INFCIRC–9(Rev.2/Add.8)) **Agreement on the privileges and immunities of the Agency: Acceptances by Member States.** International Atomic Energy Agency, Vienna (Austria). Jan 1991. 12p. Order Number DE91625126. Source: OSTI; NTIS (US Sales Only); INIS.

Hard copies are available in various languages from IAEA Division of Publication, Distribution Unit.

The document lists the 61 Member States which by 1 January 1991, have accepted the Agreement on the Privileges and Immunities of the International Atomic Energy Agency as provided for in Section 38 thereof. This list is followed by the texts of reservations made to the Agreement.

16029 (IAEA-INFCIRC–385(Add.1)) **Communication received from the Federal Republic of Germany.** International Atomic Energy Agency, Vienna (Austria). Feb 1991. 2p. Order Number DE91625118. Source: OSTI; NTIS (US Sales Only); INIS.

The document reproduces the text of the Note (dated 4 October 1990), received by the Secretariat of the IAEA from the Permanent Mission of the Federal Republic of Germany regarding continued application of treaties of the Federal Republic of Germany and the status of the treaties of the German Democratic Republic following its accession to the Federal Republic of Germany with effect from 3 October 1990.

16030 (IAEA-TECDOC–589) **Analysis of replies to an IAEA questionnaire on inspection and enforcement by the regulatory body for nuclear power plants.** International Atomic Energy Agency, Vienna (Austria). Mar 1991. 67p. Order Number DE91626176. Source: OSTI; NTIS (US Sales Only); INIS.

At a Special Session of the IAEA General Conference in September 1986. it was suggested that the IAEA could play a role in assisting Member States in the enhancement of their regulatory practices with the objective of increasing the confidence of the international community in the safety of nuclear power programmes. As the first stage of this assistance, the Agency initiated an IAEA Questionnaire on Regulatory Practices in Member States with Nuclear Power Programmes and summarized the results of an analysis of replies to the questionnaire, issued as IAEA-TECDOC–485 (October 1988). The IAEA Questionnaire on Inspection and Enforcement by the Regulatory Body for Nuclear Power Plants, drafted by a group of consultants and IAEA staff members in August 1989, was initiated as a follow-up to the general questionnaire on regulatory practices. This questionnaire on inspection and enforcement was sent on 3 October 1989 to 31 Member States in which nuclear power plants are under construction and/or in operation. Replies to the questionnaire received from 26 Member States were analysed by IAEA staff members with the assistance of consultants in order to identify the main differences in approach and important aspects of inspection and enforcement by the regulatory body for nuclear power plants. This report is the summary report on the results of the analysis of the replies to the questionnaire from 26 Member States. 12 tabs.

16031 (INIS-mf–12806, pp. 367-370) **International cooperation in nuclear energy.** Blix, H. (International Atomic Energy Agency, Vienna (Austria)). Canadian Nuclear Association, Toronto, ON (Canada). 1983. 388p. (CONF-830934–: 4. Pacific Basin nuclear conference, Vancouver (Canada), 11-15 Sep 1983). In *Proceedings of the fourth Pacific Basin nuclear conference.* Order Number DE91626129. Source: OSTI; NTIS (US Sales Only); INIS.

In the field of nuclear energy, much useful international cooperation is underway and much more could be undertaken. International cooperation is essential if nuclear power is to continue to expand and to reach its full potential. The author reviews progress the IAEA has made in promoting cooperation in the areas of safeguards, information management, nuclear trade, safety, codes of practice, exchange of operating experience, response to nuclear accidents, transportation of radioactive materials, waste management, research, aid for developing countries, and non-proliferation.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US;In French). Author affiliations are not listed in this index.

Development of an energy efficient desiccant dehumidifier: Final report, 16:14792 (R;US)

Alabama Univ., University, AL (USA)
Permeability changes in coal resulting from gas desorption: Annual report, August 16, 1989–August 15, 1990, 16:13989 (R;US)

Alabama Univ., University, AL (USA). Dept. of Mineral Engineering
Permeability changes in coal resulting from gas desorption: Fifth quarterly report, August 15, 1990–November 15, 1990, 16:13990 (R;US)

Alaska Univ., Fairbanks, AK (USA). Geophysical Inst.
Arctic ice islands: Final report, 16:14051 (R;US)

Allied-Signal Aerospace Co., Kansas City, MO (USA). Kansas City Div.
Multivariate calibration techniques applied to NIRA [near infrared reflectance analysis] and FTIR [Fourier transform infrared] data: Final report, 16:14968 (R;US)

Ames Lab., IA (USA)
Advances in sample introduction for inductively coupled plasma spectrometry, 16:14967 (R;US)
Excited state structure, energy and electron transfer dynamics of photosynthetic reaction centers: A hole burning study, 16:14410 (R;US)
Hydrogen diffusion and microstructure in undoped and boron-dope hydrogenated amorphous silicon: An IR and SIMS study, 16:15816 (R;US)
Interface stability and defect formation during crystal growth, 16:14949 (R;US)
Spontaneously adsorbed monolayer films: Fabrication, characterization, and application of monolayers of alkanethiol and sulfur-bearing cyclodestrin derivatives, 16:14982 (R;US)

AN SSSR, Leningrad (USSR). Inst. Yadernoj Fiziki
Automatic apparatus for measuring the magnetic and kinetic properties of high-temperature superconductors and magnetics, 16:15201 (R;SU;In Russian)
Conformal invariance and pion wave functions of nonleading twist, 16:15596 (R;SU)
Double electron spectrometer, 16:15177 (R;SU;In Russian)
Energy distribution of intense gamma lines caused by intranucleon excitations, 16:15752 (R;SU;In Russian)
Hartree-Fock method, generalized model of nucleus and electron scattering on nuclei, 16:15753 (R;SU;In Russian)
K-shell photoionization cross sections, 16:15501 (R;SU;In Russian)
Neutron dosemeters and radiometers check-up installation, 16:15179 (R;SU;In Russian)
On electron mass hidden in the energies of the intense gamma lines, 16:15754 (R;SU;In Russian)
Quantum chemical simulation of hydrogen like states in silicon and diamond, 16:15500 (R;SU;In Russian)

Search for correlated groups of particles produced in interactions of neon-22 relativistic nuclei with nuclei in photoemulsion at 4.1 A GeV/c momentum, 16:15689 (R;SU;In Russian)
Six-quark system and algebraic version of resonating-group method. Part 2: 2.Integral kernels and generating matrix elements of potential and kinetic energies, 16:15595 (R;SU;In Russian)
The role of the final state interaction in the ionization of the K-shell during the β-decay of nuclei, 16:15755 (R;SU)
Two-dimentional detector with high spatial resolution in two coordinates for X-ray diffractometry, 16:15178 (R;SU;In Russian)

AN SSSR, Moscow (USSR)
Action of ^{40}K in low doses on biological active animal skin locuses, 16:15399 (IA;SU;In Russian)
Action of hypoxic hypoxia used as nonspecific therapeutic measure in irradiated animals on cardiovascular and respiratory functional systems, 16:15410 (IA;SU;In Russian)
Analysis of DNA blood plasma as a test of early diagnosis of radiation injuries, 16:15400 (IA;SU;In Russian)
Biological dosimetry of fluorographic examination of chest, 16:15386 (IA;SU;In Russian)
Changes in contact properties of blood cells in acute radiation pathology, 16:15390 (IA;SU;In Russian)
Changes in radiosensitivity of animals under conditions of fractionated gamma radiation and use of radioprotective substances and immunomodulators, 16:15407 (IA;SU;In Russian)
Changes in thermohemolysis parameters of human erythrocytes subjected to irradiation, 16:15392 (IA;SU;In Russian)
Comparative chemical modification of cytogenetic effect during gamma and neutron irradiation of human lymphocytes of G_0 stage, 16:15414 (IA;SU;In Russian)
Diethon is an effective agent of protection and treatment of skin in radiation effects, 16:15425 (IA;SU;In Russian)
Effect of combined ionizing and laser radiations on survival rates of haploid and diploid yeasts cells, 16:15393 (IA;SU;In Russian)
Influence of radioprotective substances on postradiation changes in cytochrome R-450 and aminopyrine-N-demethylase activity in microsomal liver fraction of rats, 16:15418 (IA;SU;In Russian)
Influence of serotonin on reactivity of hypothalamovasopressynergetic system in ionizing radiation effect, 16:15411 (IA;SU;In Russian)
Influence of structural factors on radioprotective activity of derivatives of 1-(3-hydroxyphenyl)-2-aminoethanol, 16:15401 (IA;SU;In Russian)
Lymphocytes of peripheric blood as an indicator of state of irradiated body hemopoiesis, 16:15387 (IA;SU;In Russian)
Micronuclear induction in mice somatic cells exposured in region of Chernobyl Nuclear Power Plant, 16:15398 (IA;SU;In Russian)
Micronuclear test as indicator of radiation injury, 16:15388 (IA;SU;In Russian)
Modification of acute radiation injuries by cytozares, 16:15402 (IA;SU;In Russian)
Modification of radiation injuries by electromagnetic radiation of ultrahigh frequency, 16:15394 (IA;SU;In Russian)
Modification of radiation injuries of stem blood formation cells of mice by cadmium ions and recombinated human interleukin-2, 16:15417 (IA;SU;In Russian)
Modification of radioprotective substances action with the help of surfactants, 16:15420 (IA;SU;In Russian)
Modification of small intestine radiation injuries by radioprotective substances of different chemical classes, 16:15397 (IA;SU;In Russian)
Nonidentificated radiosensitive factor of animal and human blood at initial period of radiation injuries, 16:15391 (IA;SU;In Russian)
On possibilities of use of chromosomal aberrations for evaluation of state of cereals in radioactive contamination of craps, 16:15395 (IA;SU;In Russian)
On the problem of possibility of simulating of chromosomal postradiation recovery after finishing of spontaneous repair: modifying action of thyroxine, 16:15403 (IA;SU;In Russian)
Peculiarities of radiomodifying action of derivatives of purine bases, 16:15406 (IA;SU;In Russian)
Prophylaxis of radiation injuries of thyroid by means of new selective radiation substance, 16:15424 (IA;SU;In Russian)
Prospects for prophylaxis by beta-carotene of gonad radiation injuries, 16:15412 (IA;SU;In Russian)
Protection and recovery of bone marrow in fractionated irradiation of animals in air and acute hypoxia, 16:15423 (IA;SU;In Russian)
Protection of intestine by total hypoxia in single and fractionated irradiation, 16:15419 (IA;SU;In Russian)
Radiation protective properties of substituted imino-dihydrofurans and derivatives of propionic acid, 16:15404 (IA;SU;In Russian)
Radiobiological analysis of base of biological indication of radiation injuries, 16:15389 (IA;SU;In Russian)
Radiobiological base of radiation injury diagnosis, 16:15783 (IA;SU;In Russian)
Radioprotective action of thiazolines (evaluation with the position of hypothesis of endogenous background of radioresistance), 16:15416 (IA;SU;In Russian)
Radioprotective effect of derivatives of mercaptoethylamines, 16:15421 (IA;SU;In Russian)
Radioprotective effect of gaseous hypoxia in radiotherapy of human tumors, 16:15413 (IA;SU;In Russian)
Radioprotective properties of dervatives of oxolinic acid, 16:15422 (IA;SU;In Russian)
Radioprotective substances and the theory of radioprotective effect, 16:15408 (IA;SU;In Russian)
Regularities and molecular mechanisms of postradiation thymidinemia, 16:15396 (IA;SU;In Russian)
Research for new potential radioprotective substances among nitrogen containing derivatives of 1,4-naphthoquinone, 16:15415 (IA;SU;In Russian)
Use of dispersion silice and crownesters as a modifier of aminothioles and indolylalkylamines, 16:15405 (IA;SU;In Russian)
Use of mexamine liposome form in acute radiation injury, 16:15409 (IA;SU;In Russian)

AN SSSR, Moscow (USSR). Fizicheskij Inst.
Anderson carrier localization effect in the Hubbard upper zone on silicon photoconductivity in the submillimeter spectral range, 16:15814 (IA;SU;In Russian)
Confinement and hadron production at large angles, 16:15586 (IA;SU;In Russian)
Effects of collective neutrinos emission, 16:15585 (IA;SU;In Russian)
Electron and gamma irradiation effects on properties of high temperature oxide metal ceramics, 16:14927 (IA;SU;In Russian)
Experimental and theoretical physics: Collection, 16:15456 (I;SU;In Russian)
Impurity microprecipitates in silicon, 16:14905 (IA;SU;In Russian)
On composition of strange quarks in nucleon, 16:15587 (IA;SU;In Russian)
On cross section of charged particle reactions with nuclei in optical model with strong absorption, 16:15742 (IA;SU;In Russian)
On decay of doorway states produced in (γ,n) reaction on ^{59}Ni and ^{56}Fe nuclei, 16:15744 (IA;SU;In Russian)
On one simple method of testing scaling character of particle multiple production models in high and superhigh hadron interactions, 16:15588 (IA;SU;In Russian)
On the peculiarity of hadron generation in antineutron interaction with nuclei, 16:15743 (IA;SU;In Russian)
Peculiarity of anti-Stokes luminescence from $^4S_{3+2}$ level in $Y_3Al_2O_{12}$-Er^{3+} high concept rated crystals, 16:15813 (IA;SU;In Russian)
Plasma physics: Collection, 16:15892 (I;SU;In Russian)
Quantum radiophysics: Collection, 16:15457 (R;SU;In Russian)
Study of a-Si:H films implanted with transition metal ions, 16:15815 (IA;SU;In Russian)

AN SSSR, Novosibirsk (USSR). Inst. Yadernoj Fiziki
Anisotropy of cross sections of X-ray Raman scattering in carbon, 16:15775 (R;SU;In Russian)
Complex of programs for atomic physics problems. Self-consistent field method, 16:15497 (R;SU;In Russian)
Laser spectroscopy of atomic samarium, 16:15496 (R;SU)
Preliminary results of searching for exotic long-range interaction violating T invariance, 16:15635 (R;SU;In Russian)
Theory of diffusion photoeffect in hydrogen atom. Part 4,5: 4. Ionization of a three-dimensional atom in a monochromatic field. 5.

Diffusion excitation in two- and three-frequency field, 16:15856 (R;SU;In Russian)

AN Ukrainskoj SSR, Kharkov (Ukrainian SSR). Fiziko-Tekhnicheskij Inst.
Calculation of electrodynamical characteristics and choice of accelerating structure for storage ring, 16:15149 (R;UA;In Russian)
Collective interaction of monoenergetic relativistic high-energy electron beams with plasma, 16:15908 (R;UA;In Russian)
Current limits for axially symmetrical electron beams with nonuniform current density radial distribution, 16:15094 (R;UA;In Russian)
Non-stationary theory of relativistic carcinotron with additional feedback, 16:15092 (R;UA;In Russian)
Numerical analysis of dispersion equation for electrostatic oscillations of ion-ion plasma in strong magnetic field: Part 2, 16:15910 (R;UA;In Russian)
Numerical simulation of transients in plasma near the variable potential negative charged body, 16:15479 (R;UA;In Russian)
Numerical solution of dispersion equation for two-stream ion-ion instability, 16:15909 (R;UA;In Russian)
Presentation of Green function for rectangular waveguide as an infinite sum of tensor spherical waves, 16:15093 (R;UA;In Russian)
Two-beam mechanism theory for charged particle acceleration in spatially periodical structure, 16:15095 (R;UA;In Russian)

ARCTECH, Inc., Alexandria, VA (USA)
Enhancement of microbial coal desulfurization: Final report, 16:13954 (R;US)

Argonne National Lab., IL (USA)
A first-principles generic methodology for representing the knowledge base of a process diagnostic expert system, 16:15968 (R;US)
A theory for fluidelastic instability of tube-support-plate inactive modes, 16:14480 (R;US)
A theory for fluidelastic instability of tube-support-plate inactive modes, 16:15024 (R;US)
An Assessment of Scientific Computing Technology 1991-2001, 16:15966 (R;US)
Analysis of the beam position measurement with button-type pickups in APS, 16:15143 (R;US)
Analytic solution of the Stochastic-Liouville model of spin-exchange, 16:14970 (R;US)
Analytical simulation of nonlinear response to seismic test excitations of HDR-VKL [Heissdampfreaktor-Versuchskreislauf] piping system, 16:15035 (R;US)
Applications of energetic particles in improving coating adhesion properties, 16:14892 (R;US)
Approximating the dynamic response of strain-hardening structures, 16:14998 (R;US)
APS Storage Ring vacuum chamber fabrication, 16:15142 (R;US)
APS storage ring vacuum system, 16:15141 (R;US)
Characterization of active materials and electrodes for battery R&D, 16:14668 (R;US)
Cold moderators for pulsed neutron sources, 16:14358 (R;US)
Combined NO_x/SO_2 removal in spray-dryer FGD systems, 16:14489 (R;US)
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Computation of a quadrupole magnet for the APS storage ring, 16:15144 (R;US)
Design and construction of the ZEUS barrel calorimeter, 16:15152 (R;US)
Diffusion in $YBa_2Cu_3O_{7-\delta}$, 16:14937 (R;US)
Disposal of vitrified waste in an unsaturated environment, 16:15279 (R;US)
DSM as an acid rain control strategy, 16:14498 (R;US)
Effects of a friction reducing surfactant on the performance of a shell-and-tube heat exchanger, 16:15023 (R;US)
Electromagnetic field-computation for particle accelerators, today and tomorrow, 16:15100 (R;US)
Fast shower simulation based on GauB's law, 16:15557 (R;US)
IPNS chopper spectrometer improvements, 16:15151 (R;US)
Methane emissions from sanitary landfills, 16:15219 (R;US)
Microbeam titanium isotopic analysis by resonance ionization mass spectrometry, 16:15458 (R;US)
Practical superconductor development for electrical power applications: Annual report for FY 1990, 16:14922 (R;US)
Present status and future prospects of neutronics Monte Carlo, 16:15760 (R;US)
Protection by WR-151327 against late-effect damage from fission-spectrum neutrons, 16:15383 (R;US)
Recent results and future prospects for the polarized beam at Fermilab, 16:15523 (R;US)
Seismic requalification of a safety class crane, 16:14330 (R;US)
Sintering and hot isostatic pressing of $Bi_2Sr_2CaCu_2O_x$, 16:14923 (R;US)
Table-lookup algorithms for elementary functions and their error analysis, 16:15971 (R;US)
The DIF3D nodal kinetics capability in Hex-Z geometry: Formulation and preliminary tests, 16:14574 (R;US)
Thermal striping of a rod: Thermoelastic solution for sinusoidal fluid temperature, 16:14597 (R;US)
Tritium retention and release analysis for US-ITER blanket, 16:15921 (R;US)
Two-phase flow patterns and frictional pressure gradients in a small rectangular channel: A comparison between two horizontal orientations, 16:15022 (R;US)
Visual presentation and computer animation, 16:15965 (R;US)

Configurational diffusion of coal macromolecules: Quarterly progress report, December 15, 1990–March 15, 1991, 16:13974 (R;US)

B

B and W Fuel Co., Lynchburg, VA (USA)
Qualification of the B and W Mark B fuel assembly for high burnup and development of an advanced extended burnup fuel assembly design incorporating urania-gadolinia: Project summary report, 16:14504 (R;US)

Babcock and Wilcox Co., Alliance, OH (USA). Contract Research Div.
Qualification of the B and W Mark B fuel assembly for high burnup and development of an advanced extended burnup fuel assembly design incorporating urania-gadolinia: Project summary report, 16:14504 (R;US)

Babcock and Wilcox Co., Alliance, OH (USA). Research and Development Div.
Closure development for high-level nuclear waste containers for the tuff repository: Phase 1, Final report, 16:14313 (R;US)

Babcock and Wilcox Co., Barberton, OH (USA). Domestic Fossil Operations
Environmental monitoring for the DOE coolside and LIMB demonstration extension projects: Final report for the period of October, November, December 1989 and January 1990, 16:14493 (R;US)

Babcock and Wilcox Co., Casaville, WI (USA)
Coal reburning for cyclone boiler NO_x control demonstration: Quarterly report No. 2, July–September 1990, 16:13998 (R;US)

Babcock and Wilcox Co., Lynchburg, VA (USA). Nuclear Power Div.
Closure development for high-level nuclear waste containers for the tuff repository: Phase 1, Final report, 16:14313 (R;US)

Babcock and Wilcox Co., Lynchburg, VA (USA). Research and Development Div.
Qualification of the B and W Mark B fuel assembly for high burnup and development of an advanced extended burnup fuel assembly design incorporating urania-gadolinia: Project summary report, 16:14504 (R;US)

Baltic Marine Environment Protection Commission, Helsinki (Finland). Helsinki Commission
Activities of the commission 1987: Including the Ninth Meeting of the Commission held in Helsinki 15-19 February 1988, 16:15281 (R;FI)
Activities of the Commission 1988: Including the Tenth Meeting of the Commission held in Helsinki 14-17 February 1989, 16:15283 (R;FI)
Activities of the Commission 1989: Including the Eleventh Meeting of the Commission held in Helsinki 13-16 February 1990, 16:15284 (R;FI)
Reception of wastes from ships in the Baltic Sea area - a MARPOL 73/78 special area, 16:15282 (R;FI)
Second periodic assessment of the state of the marine environment of the Baltic Sea, 1984-1988; general conclusions, 16:15286 (R;FI)
Study of the risk for accidents and the related environmental hazards from the transportation of chemicals by tankers in the Baltic Sea area, 16:15285 (R;FI)

Battelle Pacific Northwest Lab., Richland, WA (USA)
Investigation of the combined failure of a pressure tube and defected fuel rod in PRTR, 16:14527 (R;US)

Battelle, Columbus, OH (USA)
Development of the Electroacoustic Dewatering (EAD) process for fine/ultrafine coal: Ninth quarterly progress report, period ending December 31, 1990, 16:13937 (R;US)

Battelle-Northwest, Richland, WA (USA). Pacific Northwest Lab.
Fire incident, 233-S facility, Chemical Processing Department: Date of incident, November 6, 1963: Part 2, Conclusions and recommendations, 16:14329 (R;US)
Rupture of plutonium oxide storage container, March 13, 1979, 16:14328 (R;US)

Bechtel Group, Inc., San Francisco, CA (USA)
Slurry reactor design studies: Slurry vs. fixed-bed reactors for Fischer-Tropsch and methanol: Final report, 16:13967 (R;US)

Belgonucleaire SA, Brussels (Belgium)
BR3 first phase irradiation data and intermediate examinations of BN1 fuel rods: TRIBULATION Project, 16:14506 (R;BE)
BR3 first phase irradiation data and intermediate examinations of BN3 fuel rods: TRIBULATION Project, 16:14517 (R;BE)
Fabrication and characterization of FRAGEMA design fuel rods (Standard Pellets): TRIBULATION Project, 16:14508 (R;BE)
Final non destructive examinations on the BN1 fuel rod numbers 3 and 4 after their second irradiation phase: TRIBULATION Project, 16:14509 (R;BE)
Final non destructive examinations on FGA1 fuel rods after irradiation in BR3/4D_2 core: TRIBULATION Project, 16:14513 (R;BE)
Final non destructive examinations on the W1 fuel rod numbers 9, 10, 11 and 12 after their second irradiation phase: TRIBULATION Project, 16:14515 (R;BE)
Final nondestructive examinations on the BN3 fuel rod numbers 14 and 15 after their second irradiation phase: TRIBULATION Project, 16:14514 (R;BE)
Intermediate neutronic report after the BN1 rods irradiations in the BR3/4C cycle: TRIBULATION Project, 16:14507 (R;BE)
Intermediate neutronic report after the BBR1 and BBR2 rods irradiations in the BR3/4C: TRIBULATION Project, 16:14516 (R;BE)
Nondestructive examinations of BN3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14505 (R;BE)
Nondestructive examinations of W3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14510 (R;BE)
Nondestructive examinations of W1 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14511 (R;BE)
Postirradiation examination of seven BR3 fuel rods comprising the second part of the TRIBULATION Program: TRIBULATION Project, 16:14512 (R;BE)

Bergen Univ. (Norway)
Reconstruction of energetic electron spectra in the upper atmosphere: balloon observations of auroral X-rays coordinated with measurements from the EISCAT radar, 16:15480 (I;NO)

Beta Power, Inc., Salt Lake City, UT (USA)
Conceptual design study of high-performance sodium/metal chloride batteries for electric vehicle applications: Final technical report, 16:14670 (R;US)

Bethlehem Steel Corp., PA (USA)
Innovative coke oven gas cleaning system for retrofit applications: Quarterly technical progress report No. 2, April 1, 1990–June 30,1990, 16:13961 (R;US)

Fundamental investigation of duct/ESP phenomena: Topical report No. 6, First Generation Duct Injection Model, 16:14494 (R;US)

Cincinnati Univ., OH (USA)
Research in particle theory: Annual progress report, December 1, 1989–October 10, 1990, 16:15571 (R;US)

Cincinnati Univ., OH (USA). Coll. of Engineering
Demonstration of the Polymeric Barrier System (PBS) for site specific interim control applications at the Feed Materials Production Center, Fernald, Ohio and the Savannah River Plant, Aiken, South Carolina, 16:14338 (R;US)

Clark Atlanta Univ., GA (USA). Research Center for Science and Technology
A novel approach to highly dispersing catalytic materials in coal for gasification: Third quarterly report, April 1, 1990–June 30, 1990, 16:13962 (R;US)

Clemson Univ., SC (USA). School of Electrical and Computer Engineering
On the control of two manipulators holding a rigid object in the presence of uncertainty, 16:15000 (R;US)

Clermont-Ferrand-2 Univ., 63 - Aubiere (France). Lab. de Physique Corpusculaire
An experiment to detect quark effects in nuclei, 16:15758 (R;FR)

Coal Mining Research Centre, Tokyo (Japan)
Changes of coal mine safety, 16:14049 (IA;JP;In Japanese)
Combustion test of C.P.C. boiler simulator step II, 16:14035 (IA;JP;In Japanese)
Demonstration test of coal-water slurry fuel as an oil substitution for industrial boilers, 16:14028 (IA;JP;In Japanese)
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
Development of a highly efficient gasification process which control the ash melting temperature by adding the flux CaO, 16:13981 (IA;JP;In Japanese)
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)
Development of dewatering process of low rank coal, 16:13980 (IA;JP;In Japanese)
Fundamental tests on recovery of valuable matters from coal ash. I.: Recovery of magnetite from coal ash by a high gradient magnetic separator, 16:14006 (IA;JP;In Japanese)
Fundamental tests on recovery of valuable matters from coal ash. II.: Direct hydrofluoric acid leach process, 16:14007 (IA;JP;In Japanese)
Fundamental tests on recovery of valuable matters from coal ash. III.: Calsinter method, 16:14008 (IA;JP;In Japanese)
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
On the history of coal preparation technology in Japan, 16:13943 (IA;JP;In Japanese)
Pilot plant experiment of fluidized-bed cement burning system, 16:14030 (IA;JP;In Japanese)
Present state and outlook for utilization of coal ash, 16:14003 (IA;JP;In Japanese)
Present state of R and D projects for coal mine safety, 16:14050 (IA;JP;In Japanese)
Present study for coal mining production, 16:14014 (IA;JP;In Japanese)
R and D on coal ash utilization, 16:14004 (IA;JP;In Japanese)
Research and development of DIOS-process (the second). I.: Summary, 16:14031 (IA;JP;In Japanese)
Research and development of DIOS-process (the second). II.: Development status of new direct iron ore smelting process (DIOS-process), 16:14032 (IA;JP;In Japanese)
Research and development of DIOS-process (the second). III.: Some results of total system analysis on DIOS-process, 16:14033 (IA;JP;In Japanese)
Research and development of DIOS-process (the second). IV.: Outline of prereduction fluidized bed for DIOS process, 16:14034 (IA;JP;In Japanese)
Research and development of the pressurized fluidized bed combusiton combined cycle, 16:14036 (IA;JP;In Japanese)
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. II.: Development of hot gas desulfurization process, 16:13978 (IA;JP;In Japanese)

Support study for the development of an entrained-bed coal gasification power generation plant. III.: Development of high temperature dry-type dust separator, 16:13979 (IA;JP;In Japanese)
Technical progress of coal mining engineering, 16:14013 (IA;JP;In Japanese)
Utilization tests of fly ash stabilized by Poz-o-Tec system, 16:14005 (IA;JP;In Japanese)
Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)

Coal Technology Corp., Bristol, VA (USA)
Evaluation, engineering and development of advanced cycloning processes: Quarterly technical progress report No. 1, September 27, 1990–December 31, 1990, 16:13941 (R;US)
Proof of concept and performance optimization of high gravity batch type centrifuge for dewatering fine coal: Quarterly technical progress report No. 5 revised, September 21, 1990–December 20, 1990, 16:13938 (R;US)

Colorado School of Mines, Golden, CO (USA). Center for Welding and Joining Research
Novel concepts in weld metal science: Role of gradients and composite structure: Progress report, January 1, 1990–December 31, 1990, 16:14900 (R;US)

Colorado School of Mines, Golden, CO (USA). Dept. of Chemical Engineering and Petroleum Refining
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, September–November 1990, 16:13955 (R;US)

Colorado Univ., Boulder, CO (USA)
Indirect electrolysis process for removal of pollutants from coal liquids: Quarterly report, October 1, 1990–December 31, 1990, 16:13957 (R;US)

Application of Licado process to eastern oil shale, 16:14158 (RA;US)
Application of LO-CAT chelated iron scrubbers to retort gases, 16:14189 (RA;US)
Application of synchrotron radiation for analysis of oil shale and shale derived products, 16:14181 (RA;US)
Asphalt from Utah Tar Sands - a JWBA [James W. Bunger and Associates] project sponsored by the U.S. Department of Energy, 16:14182 (RA;US)
Athabasca south: Resource characterization of an active in situ pilot area, 16:14137 (RA;US)
Beginning of an oil shale industry in Australia, 16:14183 (RA;US)
Biological treatability of selected organic components of an oil shale processing wastewater, 16:14186 (RA;US)
Changes in the clay mineralogy of eastern oil shale induced by retorting, 16:14153 (RA;US)
Characterization of heavy oil produced from the Wolf Lake in situ combustion project, 16:14102 (RA;US)
Characterization of liquid and gaseous products from the KENTORT II fluidized bed retort/gasifier, 16:14177 (RA;US)
Characterization of particulates in oil sands processing streams, 16:14166 (RA;US)
Chemical equilibria model analysis of Hope Creek eastern oil shale lysimeter leachate data, 16:14191 (RA;US)
Column flotation of eastern oil shales, 16:14159 (RA;US)
Comparison of hydroretorting, Fischer assay and Rock-Eval analyses of some world oil shales, 16:14176 (RA;US)
Definition and world resources of natural bitumen, 16:14173 (RA;US)
Development of a coking indicator for oil shales, 16:14175 (RA;US)
Directions and characteristics of jointing in the New Albany shale (Devonian-Mississippian) of southeastern Indiana, 16:14140 (RA;US)
Eastern oil shale attrition and breakage: Testing and modeling, 16:14155 (RA;US)
Effect of horizontal wells on sweep efficiencies when practicing enhanced oil recovery in heavy oil reservoirs, 16:14060 (RA;US)
Environmental and health surveillance monitoring results at Parachute Creek Shale Oil Project, 1988 and 1989, 16:14192 (RA;US)
Evaluation of oil shale solid waste for soil stabilization, 16:14188 (RA;US)
Examination of wet- and dry-sieved eastern oil shale and microbial reduction in its sulfur content, 16:14154 (RA;US)
Experience in the beneficiation of two Alabama tar sands, 16:14145 (RA;US)
Extraction of Alabama tar sands with heptane and carboxylic acid mixtures and using a saponification cycle, 16:14146 (RA;US)
Fluidized-bed retorting of eastern oil shale, 16:14164 (RA;US)
Heavy crude and tar sand resources in the Soviet Union, 16:14054 (RA;US)
Heavy-oil resource potential of southwest Missouri, 16:14053 (RA;US)
Kinetics of selected heavy metal dissolution from shale, 16:14187 (RA;US)

Laboratory furnace design for programmed temperature pyrolysis of fossil fuels, 16:14179 (RA;US)
Low temperature oxidation strategy for increasing the effectiveness of hot fluid recovery of bitumen - an experimental study, 16:14150 (RA;US)
Microbial desulfurization of Eastern oil shale: Bioreactor studies, 16:14161 (RA;US)
Microscopic characterization of emulsion interfaces, 16:14980 (RA;US)
Microscopic techniques for identification of coke, 16:14180 (RA;US)
Morphology of sulfide minerals in eastern oil shale, 16:14174 (RA;US)
Niche market assessment for eastern oil shale, 16:14184 (RA;US)
Nitrogen chemistry during oil shale pyrolysis, 16:14162 (RA;US)
Operation of the 5-lb/hr KENTORT II reactor in the solid recirculation mode, 16:14165 (RA;US)
Organic geochemistry and organic petrology of Paleozoic oil shales in Canada, 16:14139 (RA;US)
Organic geochemistry, petrography, and maturation trends of the Ohio shale in eastern Kentucky, 16:14138 (RA;US)
Petrobras boosts oil shale fines processing, 16:14160 (RA;US)
Prediction of particle size distribution for eastern oil shales using the self similarity approach, 16:14156 (RA;US)
Pressure cycle comminution of eastern oil shale, 16:14157 (RA;US)
Pressurized fluidized-bed hydroretorting of Indiana New Albany shale in batch and continuous reactors, 16:14163 (RA;US)
Properties of GPC [Gel Permeation Chromatography] separated maltene fractions derived from Utah and Athabasca bitumen, 16:14169 (RA;US)
Pyroclastic mineral euhedral horizons in eastern United States Devonian oil shales, 16:14141 (RA;US)
Rainfall simulation and hydrologic monitoring of a combusted western oil shale in large scale lysimeters, 16:14194 (RA;US)
Relationship of chemical type composition with rheological properties of asphalts, 16:14171 (RA;US)
Relationship of New Albany shale (Devonian-Mississippian) and Rockford Limestone (Mississippian to Silurian) in Greene County, Indiana, 16:14142 (RA;US)
Removal of hydrogen sulfide by combusted Rundle oil shale: Sulfidation of iron oxides, 16:14190 (RA;US)
Selection, design, and scale-up of equipment to extract bitumen from tar sands, 16:14148 (RA;US)
Simulated climate and shale pile response within a large scale environmental chamber developed in Wyoming, 16:14193 (RA;US)
Specific gravity-Fischer assay relationships among eastern oil shales, 16:14178 (RA;US)
Tar sands and their water content, 16:14172 (RA;US)
The chemical aspects of Alberta tar sand bitumens, 16:14170 (RA;US)

Radiosensitivity of skin fibroblasts from atomic bomb survivors with and without breast cancer, 16:15431 (R;JP)

Radioactivity Monitoring in Lancashire (RADMIL), Lancaster (UK)
Fifth annual report of RADMIL 1989/90, 16:15234 (I;GB)

Rambøll og Hannemann Raadgivende Ingeniører, Aarhus (Denmark)
Selective removal of hydrogen sulphide in relation to biomass conversion plants: Pilot scale experiment with a gas cleaning system. Technical report, 16:14396 (I;DK;In Danish)

Rensselaer Polytechnic Inst., Troy, NY (USA)
Aqueous corrosion and stress corrosion of 316SS for the ITER water-cooled blanket concept: Progress report, 1 January 1991–1 April 1991, 16:15926 (R;US)

Reynolds Electrical and Engineering Co., Inc., Las Vegas, NV (USA)
The Nevada Test Site: Application of in situ monitoring of organics at a jet-a-fuel spill, 16:15270 (R;US)

RhoMed, Inc., Albuquerque, NM (USA)
Rapid diagnosis of occult abscesses using ^{99m}Tc-labeled monoclonal antibodies, 16:15348 (R;US)

Rijksuniversiteit Utrecht (Netherlands)
Electron density fluctuation measurements in the TORTUR tokamak, 16:15891 (I;NL)

Risoe National Lab., Roskilde (Denmark)
Department of Energy Technology. Annual progress report 1 January - 31 December 1989, 16:15963 (R;DK)
Plan for the activities of Risoe National Laboraotry of the three-year period 1991 to 1993, 16:14706 (R;DK;In Danish)
Procedures to analyse γ-ray spectra obtained from the ORTEC or nuclear data ND-680 system by ORTEC's analysis software packages incorporated into a separate IBM-PC computer, 16:15192 (R;DK)
The Risoe pulverized coal fired tunnel furnace, 16:14042 (R;DK;In Danish)

Risoe National Lab., Roskilde (Denmark). Chemistry Dept.
Preliminary environmental impact statement for the Kvanefjeld Uranium Mine, 16:14325 (R;DK)
The behaviour of iodine in the terrestrial environment: An investigation of the possible enzymatically controlled iodination of humic acid, 16:14985 (R;DK)
Uranium recovery by leaching with sodium carbonate at high temperature and pressure, 16:14216 (R;DK)

Risoe National Lab., Roskilde (Denmark). Metallurgy Dept.
Metallurgy Department publications 1989, 16:14917 (R;DK)

Risoe National Lab., Roskilde (Denmark). Meteorology and Wind Energy
Extreme values of wind speeds in Denmark, 16:15254 (R;DK)
Taendpibe wind farm measurements 1988, 16:14475 (R;DK)

Risoe National Lab., Roskilde (Denmark). Nuclear Safety Research Dept.
Pin power reconstruction in COSIMA, 16:14503 (R;DK)

Risoe National Lab., Roskilde (Denmark). Systems Analysis
A technical-economic model for the industrial energy consumption and energy related CO_2, SO_2 and NO_x emissions: INDUS version 2. EMIS, 16:14721 (R;DK;In Danish)
Data acquisition and application of the soil chemistry model ECCES to forest soil, 16:15277 (R;DK)

Risoe National Lab., Roskilde (Denmark). Test Station for Wind Turbines
Aerodynamics and structural dynamics of a horizontal axis wind turbine: Raw data overview, 16:14476 (R;DK)
An aeroelastic model with applications to a two-bladed wind turbine, 16:14473 (R;DK)
Calibration of Rosemount M858 Pitot tube sensor, 16:15200 (R;DK)
Structural dynamics of a 100 kW HAWT, 16:14474 (R;DK)
Wind turbine test Vestas V27-225 kW, 16:14472 (R;DK)

Rochester Univ., NY (USA)
Double resonance reactant preparation for state-to-state studies of unimolecular reactions: Progress report, August 15, 1989–August 14, 1990, 16:14974 (R;US)

Rochester Univ., NY (USA). Lab. for Laser Energetics
Absence of molecular deuterium dissociation during room-temperature permeation into polystyrene ICF target shells, 16:15925 (R;US)
LLE review: Volume 45: Quarterly report, October–December 1990, 16:15924 (R;US)

Rowett Research Inst., Aberdeen (UK)
Studies on the enzymology of cellulose degradation by the anaerobic bacterium Clostridium thermocellum and the anaerobic fungus Neocallimastix frontalis: Final report, November 1, 1986–Octoboer 31, 1989, 16:15343 (R;LU)

Royal Inst. of Tech., Stockholm (Sweden). Dept. of Land Improvement and Drainage
Liming of acid ground water, 16:15329 (R;SE;In Swedish)

Ruhrkohle AG, Essen (Germany, F.R.)
Ruhrkohle AG. Business report 1989, 16:14046 (I;DE;In German)

Rutherford Appleton Lab., Chilton (UK)
Cross sections for five jet production above the W^+W^- threshold in e^+e^- annihilation, 16:15608 (R;GB)
Electrons in the boundary layers near the dayside magnetopause, 16:15482 (R;GB)
Empirical determination of effective charges in electron impact ionisation, 16:15507 (R;GB)
Five jet production in e^+e^- annihilation above the W^+W^- threshold, 16:15607 (R;GB)
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)
New expressions for string loop amplitudes leading to an ultra-simple conception of string dynamics, 16:15647 (R;GB)
The RAL 10 discriminator, 16:15191 (R;GB)
Thermal effects in relativistic plasmas, 16:15920 (R;GB)

S

Saint Louis Thermal Energy Corp., MO (USA)
Engineering study to determine most practical application for district chilled water in St. Louis, Missouri: Final report, 16:14866 (R;US)

Salzgitter Industriebau GmbH (Germany, F.R.)
German-Canadian cooperation study on the techno-economical use of West-Canadian coal in Ontario and East Asia using DENSECOAL technology, 16:14023 (I;DE;In German)

Sandia National Labs., Albuquerque, NM (USA)
A constitutive model for jointed rock mass with two intersecting sets of joints, 16:14307 (R;US)
A vortex panel method for calculating aircraft downwash on parachute trajectories, 16:15208 (R;US)
An introduction to testing parachutes in wind tunnels, 16:15210 (R;US)
Analysis of component surface/downhole ground motions at Yucca Mountain for underground nuclear explosions in Pahute Mesa, 16:14306 (R;US)
Analysis of core damage frequency due to fire at the Savannah River K-Reactor, 16:14649 (R;US)
Benchmarking numerical predictions with force and moment measurements on slender, supercavitating bodies, 16:15517 (R;US)
Bobbin stresses generated by wire winding, 16:15013 (R;US)
CMOS IC fault models, physical defect coverage, and I_{DDQ} testing, 16:15057 (R;US)
Compilation of selected marine radioecological data for the Formerly Utilized Sites Remedial Action Program: Summaries of available radioecological concentration factors and biological half-lives, 16:14308 (R;US)
Conceptual design and system studies for a 600 kW repetitive pulse transformer, 16:15056 (R;US)
Contamination weeping: A chemical ion exchange model, 16:15012 (R;US)
Developing natural convection in a fluid layer with localized heating and large viscosity variation, 16:15515 (R;US)
Direct optical phase shifter for phased-array systems, 16:15014 (R;US)
Effect of atmospheric variations on electromagnetic distance measurements, 16:15202 (R;US)
Electronic properties of Si-doped n-doping-intrinsic-p-doping-intrinsic (nipi) structures in GaAs, 16:14956 (R;US)
Environmentally conscious manufacturing at Sandia National Laboratories, 16:15256 (R;US)
Estimates of spatial correlation in volcanic tuff, Yucca Mountain, Nevada: Yucca Mountain Site Characterization Project, 16:14309 (R;US)

Evaluation of saponite and saponite/sepiolite fluids for geothermal drilling, 16:14458 (R;US)
Experimental study of narrow slot, cavity-backed apertures with finite wall conductivity, 16:15060 (R;US)
General theme report: Working session 2, Solar thermal systems, 16:14427 (R;US)
HEART handbook for guest editors, 16:16024 (R;US)
High power light activated semiconductor switches with subnanosecond rise time, 16:15058 (R;US)
Intelligent systems for remote decommissioning in hazardous environments, 16:14311 (R;US)
Intense light-ion beams provide a robust, common-driver path towards ignition, gain and commercial fusion energy, 16:15953 (R;US)
Ion beam testing of the Aerolor X-point dump plate for the Joint European Torus, 16:15951 (R;US)
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
Literature review of crud spallation source with application to a nuclear waste repository, 16:14310 (R;US)
Measurements of passive-scalar spectra for grid turbulence using a nonlinear optical technique, 16:15516 (R;US)
Mechanical states in wound heterogeneous tapes by the finite element method, 16:14955 (R;US)
Mechanical stress states in heterogeneous, wound rolls, 16:14954 (R;US)
Non-CFC cleaning of printed wiring boards, 16:15255 (R;US)
Parameterizing and block-averaging electrical characteristics of a reservoir: An essential part of electrical/electromagnetic evaluation of production process, 16:14056 (R;US)
Phase 1 drilling operations at the Magma Energy Exploratory Well (LVF 51-20), 16:14459 (R;US)
Phased-array antenna control by a monolithic photonic integrated circuit, 16:15015 (R;US)
Plasma-sprayed materials for magnetic fusion energy devices, 16:15952 (R;US)
Practical guide for testing and maintenance of high temperature drilling fluids during drilling, coring, logging, and cementing wellbores, 16:15045 (R;US)
Pre-Tiger Team Self-Assessment report, 16:14344 (R;US)
Pressurized melt ejection into water pools, 16:14642 (R;US)
Production ready feature recognition based automatic group technology part coding, 16:15011 (R;US)
PTTSA Action Plan Report, 16:14345 (R;US)
Pulsed power performance of the new RLA [Recirculating Linear Accelerator], 16:15081 (R;US)
PV concentrators today and tomorrow, 16:14412 (R;US)
Rapid moisture measurements in thin sand slabs, 16:15325 (R;US)
Raybot: A practical implementation of a hierarchical control system for telerobotic land vehicles, 16:15994 (R;US)
Recent advances with quiescent power supply current (I_{DDQ}) testing at Sandia using the HP82000, 16:15061 (R;US)
Recommendations for cask features for robotic handling from the Advanced Handling Technology Project, 16:14230 (R;US)
Reduction of solvent use through fluxless soldering, 16:14699 (R;US)
S-parameter measurements and applications of superconducting flux flow transistors, 16:15059 (R;US)
Shock characterization of epoxy: 42 volume percent glass microballoons, 16:14953 (R;US)
Solutions to current induced avalanche burnout, 16:15054 (R;US)
Strained quantum well leaky-mode diode laser arrays, 16:15055 (R;US)
The DOE Solar Thermal Electric Program Concentrator Technology Project, 16:14434 (R;US)
The impact of thermal aging on the flammability of electric cables, 16:14579 (R;US)
The solidification behavior of an Alloy 625/718 variant, 16:14918 (R;US)

Savannah River Lab., Aiken, SC (USA)
Control of radioactive waste-glass melters: Parts 1 and 2, 16:14258 (R;US)
Subcooled burnout correlation for annuli, 16:14624 (R;US)

Shealy Environmental Services, Inc., Columbia, SC (USA)
Chronic toxicity evaluation of the Savannah River Site DETF discharges and three locations on Tims Branch: Final report, 16:15308 (R;US)

Shoshone-Bannock Tribal Fisheries Dept., Fort Hall Reservation, ID (USA)
Salmon River habitat enhancement: Annual report - 1989, 16:15289 (R;US)

Siemens AG Unternehmensbereich KWU, Muelheim an der Ruhr (Germany, F.R.). Bereich Technik, Werkstoffe
Investigations on crack initiation and propagation under static, cyclic and combined loading conditions of 1% CrMoNiV-steels at 530deg C. Final report, 16:14919 (R;DE;In German)

Skibsteknisk Laboratorium, Lyngby (Denmark)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Text, 16:14477 (R;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Efficiency Characteristics, 16:14478 (R;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Data on the electricity quality, 16:14479 (R;DK;In Danish)

Skovteknisk Inst., Copenhagen (Denmark)
Condensing flue gas cooling in wood-chip-fueled power plants, 16:14388 (IA;DK;In Danish)
Information day on wood chip, and coal/wood chip fired district heating plants with flue gas condensing, 16:14387 (I;DK;In Danish)
Wood fuels, 16:14386 (IA;DK;In Danish)

Sloss (Leon) Associates, Washington, DC (USA)
Changing Soviet views of nuclear weapons, 16:14889 (R;US)

Soenderjyllands Hoejspaendingsvaerk, Aabenraa (Denmark)
Coal smoke - energy utilization: Report on experiment on Esbjergvaerket, 16:14040 (I;DK;In Danish)

Solar Energy Research Center, Borlaenge (Sweden)
SERC progress report 1990, 16:14407 (R;SE)

Solar Energy Research Inst., Golden, CO (USA)
Amorphous silicon research, 16:14413 (RA;US)
Ethanol annual report FY 1990, 16:14382 (R;US)
III-V high-efficiency photovoltaic cells, 16:14415 (RA;US)
Laser Raman and luminescence spectroscopy, 16:14416 (RA;US)
Non-CFC vacuum alternatives for the energy-efficient insulation of household refrigerators: Design and use, 16:14827 (R;US)
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells: Annual subcontract report, 1 October 1989–30 September 1990, 16:14418 (R;US)
Polycrystalline thin films, 16:14414 (RA;US)
Solid-state theory, 16:14417 (RA;US)

SRI International, Menlo Park, CA (USA)
Solid polymer electrolytes for rechargeable batteries: Final report, 16:14671 (R;US)

SRI International, Menlo Park, CA (USA). Molecular Physics Lab.
Channel diagnostics for the multi-pulse-propagation experiments at ATA: Final report, 16:15218 (R;US)

Stanford Linear Accelerator Center, Menlo Park, CA (USA)
Introduction to human factors: Revision, 16:15995 (R;US)
The Cheetah Data Management System, 16:16025 (R;US)

Statens Energiverk, Stockholm (Sweden)
Basic studies concerning dewatering of peat, 16:13945 (R;SE;In Swedish, English)
Biogas potential in organic wastes in Sweden, 16:14383 (R;SE;In Swedish)
Gasification of wood fuels and electric power generation with a diesel engine: Long-term experiment in CFBG-pilot plant at Studsvik, 16:14384 (R;SE;In Swedish)
Growth maximization is deciduous trees optimally supplied with nutrients and water: Report for the period 1987-04-01–19890-06-30, 16:14376 (R;SE;In Swedish)
Minimization of emission of chlorinated organic compounds at refuse incineration, stage 1, 16:15262 (R;SE;In Swedish)
Mobile equipment for briquetting of straw: Primary study, 16:14393 (R;SE;In Swedish)
NO_x and N_2O formation in a pressurized bench-scale fluidized bed reactor, 16:15261 (R;SE)

On the high temperature sulphur capture by calcium based sorbents: Modelling of the calcination, sintering and sulphation of the sorbent, 16:15259 (R;SE)
Peat characterization: Progress report, stage 3, 1988-1990, 16:13934 (R;SE;In Swedish)
Peltier heat pumps, 16:14829 (R;SE;In Swedish)
PFBC-development, 16:15260 (R;SE;In Swedish)
Phase composition of sintered masses formed in fluidized bed combustors, 16:14043 (R;SE)
SERC progress report 1990, 16:14407 (R;SE)
Sorption/Compression heat pump: Final report, 16:14828 (R;SE;In Swedish)
Storage of crumb peat, 16:14024 (R;SE;In Swedish)

Statens Inst. for Straalehygiene, Oslo (Norway)
Whole-body counting 1990, 16:15803 (R;NO;In Norwegian)

Stazione Sperimentale per i Combustibili, San Donato Milanese (Italy)
Evaluation of antiknock quality of gasolines by the 'energetic criterion': Final report, 16:14100 (R;LU)

Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)
Conversion of oil-fired boilers to natural gas - changes in efficiency and emissions, 16:14135 (R;SE;In Swedish)
Energy recovery by NOHEX heat transfer: Preliminary study, 16:14859 (R;SE;In Swedish)
Integrated energy and environmental analysis using computer based models, 16:14678 (R;SE;In Swedish)
Vacuum insulation for LNG, 16:14131 (R;SE;In Swedish)

Stiftelsen for Industriell og Teknisk Forskning (SINTEF), Trondheim (Norway)
Energy conservation in the shrimp processing industry: Final report, 16:14858 (R;NO;In Norwegian)
Simplified toxicity testing of drilling muds I: Marine phytoplankton Skeletonema costatum grown in test tubes, 16:14095 (R;NO)

Stockholm Univ. (Sweden). Inst. of Physics
Cosmic-ray muons as a calibration source for high-energy gamma-ray detectors, 16:15194 (R;SE)
Democratic Monte-Carlo generation of hadronic fragments with conserved momentum, 16:15610 (R;SE)

Strasbourg-1 Univ., 67 (France). Centre de Recherches Nucleaires
Assembly of the Vivitron generator: State of the art on the 29th September 1989, 16:15075 (R;FR;In French)
Assembly of the Vivitron generator: State of the art on the 1st february 1990, 16:15077 (R;FR;In French)
Equipment for the Vivitron beam, 16:15088 (R;FR;In French)
Superdeformation at and above the Yrast, 16:15693 (R;FR)
The Vivitron process control, 16:15076 (R;FR)
The Vivitron resistors, 16:15108 (R;FR;In French)

Studsvik Energy, Nykoeping (Sweden)
Gasification of wood fuels and electric power generation with a diesel engine: Long-term experiment in CFBG-pilot plant at Studsvik, 16:14384 (R;SE;In Swedish)
Minimization of emission of chlorinated organic compounds at refuse incineration, stage 1, 16:15262 (R;SE;In Swedish)
Peltier heat pumps, 16:14829 (R;SE;In Swedish)
Sorption/Compression heat pump: Final report, 16:14828 (R;SE;In Swedish)
Vacuum insulation for LNG, 16:14131 (R;SE;In Swedish)

Studsvik Nuclear, Nykoeping (Sweden)
Phase composition of sintered masses formed in fluidized bed combustors, 16:14043 (R;SE)

Stuttgart Univ. (Germany, F.R.). Inst. fuer Plasmaforschung
Numerical calculation of the voltage profile and the bias-voltages in plasma reactors with HF-discharges, 16:15902 (R;DE;In German)

Superconducting Super Collider Lab., Dallas, TX (USA)
A controlled master frequency oscillator for the SSC low energy booster, 16:15137 (R;US)
Conceptual design for the thermal shield bridges and multilayer insulation in the interconnect region for the SSC, 16:15138 (R;US)
Constant of Motion and dynamic equations for one-dimensional autonomous system and radiation damping, 16:15099 (R;US)
Design and A.C. loss considerations for the 60 mm dipole magnet in the high energy booster, 16:15139 (R;US)
From QCD to Chiral Dynamics: A smooth transition, 16:15609 (R;US)
The B factory, the Superconducting Super Collider, and an e^+e^- linear collider: How they stand against each other, 16:15556 (R;US)
The mechanical response of the SSC dipole magnet to ground motion, 16:15082 (R;US)
The SSC dipole: Its conceptual origin and early design history, 16:15136 (R;US)

Svenska Gjuteriforeningen, Joenkoeping (Sweden)
Efficient and low energy demanding ventilation in foundries, 16:14817 (R;SE;In Swedish)

Swedish Corrosion Inst., Stockholm (Sweden)
Corrosion in sea water at different depths, 16:14910 (R;SE;In Swedish)

Swedish Council for Building Research, Stockholm (Sweden)
Environmental consequences of the use of new energy technology: Solar heating, heat storage, heat pumps, 16:14409 (R;SE;In Swedish)

Agroforestry. Foreign experiences and potentials for production in Sweden, 16:14373 (R;SE;In Swedish)
Biogas potential in organic wastes in Sweden, 16:14383 (R;SE;In Swedish)
Converting short rotation forestry back into crop land, 16:14394 (R;SE;In Swedish)
Grass and grain crops for combustion - Production costs and market conditions, 16:14374 (R;SE;In Swedish)

Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden)
Characterization of humic substances from deep groundwaters in granitic bedrock in Sweden, 16:15327 (R;SE)
Complex forming properties of natural organic acids. Pt. 2: Complexes with iron and calcium, 16:14969 (R;SE)
Isolation and characterization of humics from natural waters, 16:15326 (R;SE)
Kinetics of UO_2(s) dissolution under reducing conditions: Numerical modelling, 16:14993 (R;SE)
Radiolytically induced oxidative dissolution of spent nuclear fuel, 16:14992 (R;SE)
Site characterization and validation - hydrochemical investigations. Stage 3, 16:15448 (R;SE)
Site characterization and validation - stress field in the SCV block and around the validation drift. Stage 3, 16:15449 (R;SE)
The earthquakes of the Baltic shield, 16:15447 (R;SE)
The effect from the number of cells, pH and lanthanide concentration on the sorption of promethium on the gramnegative bacterium (Shewanella putrefaciens), 16:15432 (R;SE)
The Stripa project. Annual report 1989, 16:15450 (R;SE)

Swedish State Power Board, Vaellingby (Sweden)
A mathematical and statistical evaluation of the gas data in context of the geological framework, 16:14112 (R;SE)
Analysis of drill core from the Siljan Ring impact structure and related processes in shear-zone terranes, 16:14119 (R;SE)
Automotive fuels from source to end use - phase one, 16:14887 (R;SE;In Swedish)
DDP evaluation of hydrogeological data, 16:14120 (R;SE)
Drilling, 16:14114 (R;SE)
Evaluation of electrical resistivity results from the Siljan impact region, 16:14116 (R;SE)
Evaluation of the seismic studies in the Siljan Ring area, 16:14117 (R;SE)
Exploratory studies on deep earth sources of methane: Hg as a diagnostic and prospecting tool, 16:14115 (R;SE)
Geochemistry of the Gravberg-1 well, 16:14121 (R;SE)
Gravity field analysis in the Siljan Ring area, 16:14109 (R;SE)
Inventory of the biofuel potential in southern Sweden, 16:14392 (R;SE;In Swedish)
Light hydrocarbon analyses on cuttings from Gravberg-1 well, 16:14106 (R;SE)
Petrology and mineral alterations of granite rocks from the Gravberg-1 well, Siljan impact structure, central Sweden, 16:14111 (R;SE)
Prestudy on wood fuel fired demonstration plants, 16:14391 (R;SE;In Swedish)

Reservoir evaluation, 16:14110 (R;SE)
Rock mechanics of the Gravberg well no 1, 16:14107 (R;SE)
The geochemical characterization of gases in the deep hole of the Siljan Ring structure, Sweden, 16:14108 (R;SE)
The importance of electrical energy for industrial development in Sweden, 16:14745 (R;SE;In Swedish)
Thermal measurements from the deep Gravberg-1 well, 16:14118 (R;SE)
Wireline logging in the Gravberg-1 well, 16:14113 (R;SE)

Swedish Univ. of Agricultural Sciences, Lund (Sweden). Dept. of Farm Buildings
Mobile equipment for briquetting of straw: Primary study, 16:14393 (R;SE;In Swedish)

Syracuse Univ., NY (USA). Dept. of Physics
Absence of molecular deuterium dissociation during room-temperature permeation into polystyrene ICF target shells, 16:15925 (R;US)

T

Tarconord A/S, Nyborg (Denmark)
Recycling of tar from gasification of biomass, 16:14397 (I;DK;In Danish)

Tata Inst. of Fundamental Research, Bombay (India)
Limit on tau neutrino magnetic moment from neutrino counting, 16:15572 (R;US)

Technische Hochschule Aachen (Germany, F.R.)
Determining the potential volume of industrial process steam to be generated in nuclear facilities, 16:14526 (R;DE;In German)
Investigations on structure and thermomechanical behaviour of special silicon carbide grades in respect to their application in fusion reactors, 16:14929 (R;DE;In German)

Technische Hochschule Darmstadt (Germany, F.R.). Fachgebiet Werkstoffkunde
Mechanical long-term properties of nickel-base alloys for steam turbine bolting. Final report, 16:14903 (I;DE)

Technische Hochschule Darmstadt (Germany, F.R.). Inst. fuer Chemische Technologie
Development and production of electrode-diaphragm-electrode units – EDE – for cost reduction in alkaline water electrolysis: Final report, 16:14368 (R;LU)

Technische Univ. Berlin (Germany, F.R.). Fachbereich 10 - Verfahrenstechnik
Continuous vacuum-condensation-drying of hard coal finest particles water-suspensions, 16:13944 (I;DE;In German)

Technische Univ. Berlin (Germany, F.R.). Fachgebiet Bionik und Evolutionstechnik
BERWIAN - development, construction and operation of a novel wind power plant with a vortex screw concentrator (Phase II). Final report, 16:14466 (I;DE;In German)

Technische Univ. Braunschweig (Germany, F.R.). Fakultaet fuer Maschinenbau und Elektrotechnik
Description of turbulent velocity and temperature fields of single phase flow through tight rod bundles, 16:15032 (R;DE;In German)

Technische Univ. Delft (Netherlands). Lab. of Petroleum Engineering and Technical Geophysics
Advantages of separation of high-level nuclear waste into two waste categories, 16:14301 (R;NL)

Technische Univ. Muenchen (Germany, F.R.). Fakultaet fuer Elektrotechnik und Informationstechnik
Optimized control of the plasma position in the tokamaks ASDEX and TCV under consideration of the mains-dependent current rectifiers, 16:15945 (R;DE;In German)

Technische Univ. Muenchen, Garching (Germany, F.R.). Fakultaet fuer Physik
Investigation of transport-relevant fluctuations in the plasma boundary of ASDEX, 16:15905 (R;DE;In German)

Technische Univ. Twente, Enschede (Netherlands)
Development of a new method for hydrogen recovery from lean gas mixtures (e.g., producer gas) using metal hydride slurries: Final report, 16:14369 (R;LU)

TECOGEN, Inc., Waltham, MA (USA)
Research and development of industrial drying concepts using a superheated steam atmosphere with exhaust recompression: Phase 1, Final report, October 1989–December 1990, 16:14841 (R;US)

Tennessee Univ., Tullahoma, TN (USA). Space Inst.

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *International Energy: Subject Thesaurus* (ETDE/PUB-2). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

CAPACITORS
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
CARBINOL
See METHANOL
CARBOHYDRATES
See also SACCHARIDES
CARBBANK–A structural and bibliographic data base: Annual technical progress report, 16:15339 (R;US)
CARBON
See also ACTIVATED CARBON
GRAPHITE
PYROLYTIC CARBON
ENDF/B-6 Standards Library: Summary of contents and documentation, 16:15683 (R;XA)
ISHTAR: Inner shelf transport and recycling in the Bering/Chukchi Seas: 1985–1989 moored Chlorophyll und a fluorescence, temperature, and beam attenuation measurements, 16:15280 (R;US)
CARBON 12
Computed secondary-particle energy spectra following nonelastic neutron interactions with ^{12}C for E_n between 15 and 60 MeV: Comparisons of results from two calculational methods, 16:15756 (R;US)
CARBON 12 REACTIONS
Inclusive and coincidence measurements of light particles and fragments from intermediate energy heavy ion collisions, 16:15685 (R;SE)
Signatures for isoscalar spin transitions excited in (d, d') reactions, 16:15747 (R;FR)
CARBON DIOXIDE
Indian Ocean radiocarbon: Data from the INDIGO 1, 2, and 3 cruises, 16:15309 (R;US)
Preliminary project of a solar hydrogen pilot plant for decentralized energy systems, 16:14367 (R;CH;In German)
Unit costs of carbon savings from urban trees, rural trees, and electricity conservation: A utility cost perspective, 16:15243 (R;US)
CARBON DIOXIDE LASERS
Spatial dynamics of picosecond CO_2 laser pulses produced by optical switching in Ge, 16:15083 (R;US)
CARBON FIBERS
Simulation and analysis of the response of carbon fiber composites and pyrolytic graphites to off-normal high heat loads: Contribution to the 5th Workshop on carbon for fusion applications, KFA Juelich, 17-18 May 1990, 16:15936 (R;NL)
CARBON IONS
Magnetic substates populated by double electron capture in slow ion atom collisions, 16:15508 (R;US)
CARBON MONOXIDE
A novel process for methanol synthesis: Progress report, June 1, 1990–August 31, 1990, 16:14399 (R;US)
Application of a three-dimensional, prognostic model to Mexico City air quality studies, 16:15241 (R;US)
Kinetics and mechanisms of elementary chemical processes of importance in combustion: Final report, 1 April 1986–30 June 1989, 16:14995 (R;LU)
Probe molecule studies: Active species in alcohol synthesis: First quarterly report, September 1990–December 1990, 16:14400 (R;US)
Steady reactive state in an irreversible reaction, 16:14984 (R;PK)
Synthesis of methanol in a methanol-rich liquid phase, 16:14398 (R;US)
CARBON STEELS
See also STEEL-ASTM-A533-B
Corrosion in sea water at different depths, 16:14910 (R;SE;In Swedish)
CARBON TETRACHLORIDE
Biological treatment of Hanford groundwater: Development of an ex situ treatment process, 16:15324 (R;US)
Qualitative risk assessment as a remediation management tool, 16:15439 (R;US)

CARCINOGENESIS
Experimental studies on lung carcinogenesis and their relationship to future research on radiation-induced lung cancer in humans, 16:15430 (R;US)
CARCINOMAS
Radiosensitivity of skin fibroblasts from atomic bomb survivors with and without breast cancer, 16:15431 (R;JP)
CARS SPECTROSCOPY
See RAMAN SPECTROSCOPY
CASCADE (EXTRACTION)
See EXTRACTION COLUMNS
CASKS
See also SPENT FUEL CASKS
Intelligent systems for remote decommissioning in hazardous environments, 16:14311 (R;US)
Recommendations for cask features for robotic handling from the Advanced Handling Technology Project, 16:14230 (R;US)
Shielding materials for transport package sets, 16:14228 (IA;SU;In Russian)
CASTE (INSECTS)
See INSECTS
CATALYSTS
See also ELECTROCATALYSTS
A novel approach to highly dispersing catalytic materials in coal for gasification: Third quarterly report, April 1, 1990–June 30, 1990, 16:13962 (R;US)
Method for preparing catalyst precursor for methanol synthesis, 16:14958 (PA;CA)
Optimum catalytic process for alcohol fuels from syngas: Final technical report, 16:13970 (R;US)
CATALYTIC COMBUSTORS
Catalytic combustion of natural gas: Technological aspects, 16:14134 (R;NL;In Dutch)
CATALYTIC CONVERTERS
Catalytic composite for purifying exhaust gases and a method for preparing the same, 16:14886 (PA;CA)
CATALYTIC CRACKING
Catalytic reactions using zeolite, 16:14959 (PA;CA)
CATHODES
See also PHOTOCATHODES
Cathode degradation: Final report, 16:14752 (R;US)
Evaluation of cathode materials for high energy lithium secondary batteries.: Electrochemical behavior of vanadium oxides and a manganese oxide, 16:14669 (R;JP;In Japanese)
Use of Priam in cathode design, 16:15129 (R;FR)
CATION EXCHANGE CAPACITY
See CATIONS
CATIONS
[Lewis acid modified molybdenum sulfide complexes]: Progress report, 16:14972 (R;US)
CAUSTIC FLOODING
Critical factors in the design of cost-effective alkaline flooding, 16:14061 (R;US)
Surfactant-enhanced alkaline flooding with weak alkalis, 16:14062 (R;US)
CELL GROWTH (PLANT)
See PLANT CELLS
CELL NUCLEI
Micronuclear test as indicator of radiation injury, 16:15388 (IA;SU;In Russian)
CELLS (PLANT)
See PLANT CELLS
CELLULASE
Studies on the enzymology of cellulose degradation by the anaerobic bacterium Clostridium thermocellum and the anaerobic fungus Neocallimastix frontalis: Final report, November 1, 1986–Octoboer 31, 1989, 16:15343 (R;LU)
CELLULASES
See CELLULASE
CELLULOSE
Studies on the enzymology of cellulose degradation by the anaerobic bacterium Clostridium thermocellum and the anaerobic fungus Neocallimastix frontalis: Final report, November 1, 1986–Octoboer 31, 1989, 16:15343 (R;LU)
CEMENTING
The radiolytic formation of hydrogen in cement specimens homogeneously doped with dissolver sludge, 16:14288 (R;DE;In German)
CEMENTS
Pilot plant experiment of fluidized-bed cement burning system, 16:14030 (IA;JP;In Japanese)
Systematic approach for the design of pumpable cement-based grouts for immobilization of hazardous wastes, 16:14241 (R;US)
CENTRAL AMERICA
See also COSTA RICA
Central American information system for energy planning, 16:15984 (R;US;In English, Spanish)
CENTRAL HEATING PLANTS
District heating feasibility, Industrial Corridor, Jamestown, New York: Final report, 16:14869 (R;US)
CENTRIFUGATION
Development of uranium enrichment, 16:14220 (IA;CA)
CENTRIFUGES
Evaluation, engineering and development of advanced cycloning processes: Quarterly technical progress report No. 1, September 27, 1990–December 31, 1990, 16:13941 (R;US)
Proof of concept and performance optimization of high gravity batch type centrifuge for dewatering fine coal: Quarterly technical progress report No. 5 revised, September 21, 1990–December 20, 1990, 16:13938 (R;US)
CERAMICS
Ceramic natural gas burners: Report January-December 1989, 16:14845 (R;NL;In Dutch)
Dopant effects on sintering behavior in ceramic matrix composites, 16:14933 (R;US)
Low heat rejection diesel ceramic coupon tests, 16:14674 (R;US)
NDE [nondestructive examination] development for ceramics for advanced heat engines, 16:14873 (R;US)
Twelfth annual report to Congress on the Automotive Technology Development Program: Annex No. 2, 16:14702 (R;US)
CEREALS
See also MAIZE
SORGHUM
Dimensioning and use of near-ambient drier, 16:14860 (R;FI;In Finnish)
Grass and grain crops for combustion - Production costs and market conditions, 16:14374 (R;SE;In Swedish)
CERIUM IONS
Synergistic extraction of trivalent actinides and lanthanides using HTTA and an aza-crown ether, 16:14963 (R;US)
CERIUM PHOSPHATES
Infrared and Raman investigation of rare-earth phosphate glasses for potential use as radioactive waste forms: Final Report, 16:14244 (R;US)
CERMETS
Report on the source of the electrochemical impedance on cermet inert anodes: Inert Electrodes Program, 16:14987 (R;US)
CESIUM 134
Transfrontier transfer radioactive wastes from West-European radiochemical plants in seas of the USSR, 16:15303 (IA;SU;In Russian)
CESIUM 137
Decontamination of a benzene waste stream containing Cs-137 and diphenylmercury, 16:14319 (R;US)
Decrease of deposited artificial radioactivity in urban environments. Final report, 16:15271 (R;DE;In German)
Technique for determining ^{137}Csin water samples, 16:15801 (IA;SU;In Russian)
Transfrontier transfer radioactive wastes from West-European radiochemical plants in seas of the USSR, 16:15303 (IA;SU;In Russian)
Underlying data for derived emergency reference levels. Characterization of critical pupulation groups with special consumption habits in Bavaria, 16:15384 (R;DE)

CHIMNEYS
Chimneys for condensing oil-fired furnaces, 16:15040 (R;CH;In German)
CHLORINATED ALIPHATIC HYDROCARBONS
See also CARBON TETRACHLORIDE
Non-CFC cleaning of printed wiring boards, 16:15255 (R;US)
Twelfth annual report to Congress on the Automotive Technology Development Program: Annex No. 2, 16:14702 (R;US)
CHLORINATED AROMATIC HYDROCARBONS
Health hazard evaluation of the postcuring phase of graphite composite operations at the Lawrence Livermore National Laboratory, Livermore, California, 16:15440 (R;US)
Indirect pathways as the primary source of human exposure to emissions from a Minnesota Municipal Waste Combustor, 16:15434 (R;US)
PCB manifesting, tracking and disposal requirements: TSCA Information Brief, 16:14691 (R;US)
Physical/chemical treatment of mixed waste soils, 16:14242 (R;US)
CHROMATID DELETIONS
See CHROMOSOMAL ABERRATIONS
CHROMATIN
Neutron scatter studies of chromatin structures related to function: Progress report, July 1, 1989–April 30, 1990, 16:15342 (R;US)
[Neutron scatter studies of chromatin structure related to function]: [Progress report], April 1988–April 1990, 16:15341 (R;US)
CHROMATOGRAPHIC COLUMNS
See EXTRACTION COLUMNS
CHROMIUM
Applications of energetic particles in improving coating adhesion properties, 16:14892 (R;US)
Indirect pathways as the primary source of human exposure to emissions from a Minnesota Municipal Waste Combustor, 16:15434 (R;US)
Metal speciation in biological samples with the aid of atomic absorption spectroscopy, 16:14966 (I;DE;In German)
Sensitivity and uncertainty analysis of NET/ITER shielding blankets, 16:15938 (R;NL)
CHROMIUM 52 TARGET
Analysis of experimental data on neutron-induced reactions and development of code PCROSS for the calculation of differential pre-equilibrium emission spectra with modelling of level density function: Final report on research contract 5472/RB, 16:15725 (R;XA)
Calculation of photon production cross sections and spectra from $^{52}Cr(n,x\gamma)$ reactions at 14.6 MeV, 16:15732 (RA;XA)
Measurements of γ-ray production from $^{52}Cr(n,x\gamma)$ reactions at 14.6 MeV, 16:15691 (RA;XA)
CHROMIUM ALLOYS
See also ALLOY-RA-333
Modeling second-phase formation during rapid resolidification of stainless steel alloys, 16:14920 (R;US)
Novel concepts in weld metal science: Role of gradients and composite structure: Progress report, January 1, 1990–December 31, 1990, 16:14900 (R;US)

CHROMIUM CARBIDES
Mechanical strength and thermophysical properties of PM212: A high temperature self-lubricating powder metallurgy composite, 16:14843 (R;US)
CHROMIUM OXIDES
Contamination weeping: A chemical ion exchange model, 16:15012 (R;US)
Development of improved cathodes for solid oxide fuel cells, 16:14771 (RA;US)
Monolithic solid oxide fuel cell materials, 16:14773 (RA;US)
SOFC materials development: Chromite interconnections, 16:14770 (RA;US)
Solid oxide fuel cell materials, 16:14772 (RA;US)
Solid oxide fuel cell processing using plasma arc spray deposition techniques: Plasma arc spray deposition of SOFC interconnects, 16:14766 (RA;US)
CHROMIUM-MOLYBDENUM STEELS
Investigations on crack initiation and propagation under static, cyclic and combined loading conditions of 1% CrMoNiV-steels at 530deg C. Final report, 16:14919 (R;DE;In German)
Reduction factors for creep strength and fatigue life of modified 9 Cr-1 Mo steel weldments: Confirmation by axial or torsional tests of tubular specimens with longitudinal or circumferential welds, 16:14895 (R;US)
CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS
CHROMOSOMAL ABERRATIONS
See also CHROMOSOME BREAKAGE

SUBBITUMINOUS COAL
Agglomeration
Engineering design and analysis of advanced physical fine coal cleaning technologies: Quarterly technical progress report No. 5, October–December 1990, 16:13939 (R;US)
Sulfur and mineral matter reduction in coal using selective agglomeration: Third quarterly technical report for the period April 1, 1988–June 30, 1988, 16:13936 (R;US)
Ash Content
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
Bioconversion
Enhancement of microbial coal desulfurization: Final report 16:13954 (R;US)
Briquetting
Coal-log pipeline system development: Quarterly report No. 1, August 24, 1990–November 24, 1990, 16:14016 (R;US)
Chemical Composition
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, September 1, 1990–November 30, 1990, 16:13959 (R;US)
Chemical Properties
Selective flotation of fossil resin from western coal: Quarterly report, August 1, 1990–November 30, 1990, 16:13942 (R;US)
Coal Gasification
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Coal Liquefaction
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
Coal Rank
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
Coalification
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
Cocombustion
Fluidized bed combustor test report for Proof-of-Concept Oil Shale Facility, Colorado Tract C-b, 16:14195 (R;US)
Combined-Cycle Power Plants
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Combustion
TRW Utility Demonstration Unit: Quarterly progress report, August–October 1990, 16:14026 (R;US)

Combustion Kinetics
Measurement and modeling of advanced coal conversion processes: Annual report, October 1989–September 1990, 16:13985 (R;US)
Measurement and modeling of advanced coal conversion processes: Annual report, October 1988–September 1989, 16:13984 (R;US)
Coprocessing
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, September 1, 1990–November 30, 1990, 16:13959 (R;US)
Deashing
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
In-plant testing of microbubble column flotation: Technical progress report, fourth quarter, October 1, 1990–December 31, 1990, 16:13940 (R;US)
Depolymerization
Novel process for depolymerization of coal to C_2-C_4 hydrocarbons: Progress report No. 5, September 1, 1990–November 30, 1990, 16:13965 (R;US)
Novel process for depolymerization of coal to C_2-C_4 hydrocarbons: Progress report No. 4, June 1, 1990–August 31, 1990, 16:13966 (R;US)
Desulfurization
Applications of micellar enzymology to clean coal technology: Fifth quarterly report, 16:13963 (R;US)
Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and thiobacillae: Annual report, 16:13968 (R;US)
Evaluation of sulfur-reducing microorganisms for organic desulfurization: Quarterly technical report, September 1, 1990–November 30, 1990, 16:14000 (R;US)
Molecular biological enhancement of coal biodesulfurization: Ninth quarter report, November 1990–January 1991, 16:13956 (R;US)
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and thiobacillae: Sixth quarterly report, [October–December 1990], 16:13969 (R;US)
Drying
Proof of concept and performance optimization of high gravity batch type centrifuge for dewatering fine coal: Quarterly technical progress report No. 5 revised, September 21, 1990–December 20, 1990, 16:13938 (R;US)
Ecosystems
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Energy Policy
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Flotation
Engineering design and analysis of advanced physical fine coal cleaning technologies: Quarterly technical progress report No. 5, October–December 1990, 16:13939 (R;US)
In-plant testing of microbubble column flotation: Technical progress report, fourth quarter, October 1, 1990–December 31, 1990, 16:13940 (R;US)
Selective flotation of fossil resin from western coal: Quarterly report, August 1, 1990–November 30, 1990, 16:13942 (R;US)
Fluidized Beds
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Fluidized-Bed Combustion
Demonstration project fluidized bed boilers at AKZO Hengelo, built by Stork Boilers: A project within the framework of the Netherlands Clean Coal Program. Interim report, 16:14039 (I;NL;In Dutch)
Mechanisms of coal-water mixture combustion in fluidized beds: Final report, 16:14025 (R;US)
Fuel Slurries
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Global Aspects
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Heavy Media Separation
Engineering design and analysis of advanced physical fine coal cleaning technologies: Quarterly technical progress report No. 5, October–December 1990, 16:13939 (R;US)
Hydraulic Transport
Coal-log pipeline system development: Quarterly report No. 1, August 24, 1990–November 24, 1990, 16:14016 (R;US)
Image Processing
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
Microstructure
Maceral analysis of coals for liquefaction by means of image processing, 16:13993 (IA;JP;In Japanese)
Particle Size Classifiers
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
Physical Properties
Selective flotation of fossil resin from western coal: Quarterly report, August 1, 1990–November 30, 1990, 16:13942 (R;US)
Pollution Abatement
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Pulverizers
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Research Programs
Energy Conversion and Storage Program: Annual report, 1989, 16:14703 (R;US)
Netherlands Clean Coal Program: Research and technological innovation, 16:14047 (I;NL;In Dutch)
Shrinkage
Permeability changes in coal resulting from gas desorption: Annual report, August 16, 1989–August 15, 1990, 16:13989 (R;US)
Permeability changes in coal resulting from gas desorption: Fifth quarterly report, August 15, 1990–November 15, 1990, 16:13990 (R;US)
Specifications
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Staged Combustion
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Swelling
Thermodynamics of the solvent swelling of coal: Technical progress report No. 9, September 1, 1990–November 30, 1990, 16:13987 (R;US)
Total Energy Systems
Research and development of DIOS-process (the second). IV.: Outline of prereduction fluidized bed for DIOS process, 16:14034 (IA;JP;In Japanese)
Tunnel Furnaces
The Risoe pulverized coal fired tunnel furnace, 16:14042 (R;DK;In Danish)
Uses
Research and development of DIOS-process (the second). I.: Summary, 16:14031 (IA;JP;In Japanese)
Volatile Matter
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Water Removal
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)

COAL DEPOSITS
The peats of Costa Rica: Volume 2, Resource assessment, 16:14012 (R;US)

COAL FUEL CELLS
Development of CO and H_2S tolerant PAFC anode catalysts, 16:14776 (RA;US)

Development of a coal-fueled internal manifold heat exchanger (IMHEX) molten carbonate fuel cell stack (power range 380 to 980 watts), 16:14757 (RA;US)
Development of an electrochemical hydrogen separation device, 16:14366 (RA;US)
ERC's MCFC stack development: Commercialization strategy (Power range 1-2 MW), 16:14760 (RA;US)
ERC's carbonate fuel cell stack development: Technical accomplishments, 16:14759 (RA;US)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells, 16:14762 (RA;US)
High temperature solid oxide electrolyte fuel cell power generation system, 16:14765 (RA;US)
IMHEX commercialization strategy, 16:14758 (RA;US)
Improved anode catalysts for coal gas-fueled phosphoric acid fuel cells, 16:14779 (RA;US)
International fuel cells MCFC technical accomplishment, 16:14763 (RA;US)
METC perspective, 16:14754 (RA;US)
Monolithic SOFC technology status, 16:14767 (RA;US)
Status of hot gas cleanup technology, 16:13951 (RA;US)

COAL GAS
Development of CO and H_2S tolerant PAFC anode catalysts, 16:14776 (RA;US)
Effects of coal-derived trace species on the performance of molten carbonate fuel cells, 16:14762 (RA;US)
Status of hot gas cleanup technology, 16:13951 (RA;US)

COAL GASIFICATION
See also KILNGAS PROCESS

Aromatics
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

By-Products
Mild gasification technology development process: Task 3, Bench-scale char upgrading study, February 1988–November 1990, 16:13983 (R;US)

Catalysts
A novel approach to highly dispersing catalytic materials in coal for gasification: Third quarterly report, April 1, 1990–June 30, 1990, 16:13962 (R;US)

Chars
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Chemical Reaction Yield
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Conversion Ratio
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Desulfurization
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)

Dust Collectors
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. III.: Development of high temperature dry-type dust separator, 16:13979 (IA;JP;In Japanese)

Entrainment
Development of a highly efficient gasification process which control the ash melting temperature by adding the flux CaO, 16:13981 (IA;JP;In Japanese)
Future prospects of coal policy and R and D activities, 16:14011 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. III.: Development of high temperature dry-type dust separator, 16:13979 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. II.: Development of hot gas desulfurization process, 16:13978 (IA;JP;In Japanese)

Feasibility Studies
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Fluidized Beds
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)

High Temperature
High temperature gas cleaning system study: Substudy 2.3: Alkali metals and other trace elements, 16:14002 (R;NL;In Dutch)

Hot Gas Cleanup
High temperature gas cleaning system study: Substudy 2.3: Alkali metals and other trace elements, 16:14002 (R;NL;In Dutch)
Support study for the development of an entrained-bed coal gasification power generation plant. II.: Development of hot gas desulfurization process, 16:13978 (IA;JP;In Japanese)
Support study for the development of an entrained-bed coal gasification power generation plant. I.: Outline of the support study, 16:13977 (IA;JP;In Japanese)

Mathematical Models
Measurement and modeling of advanced coal conversion processes: Annual report, October 1989–September 1990, 16:13985 (R;US)
Measurement and modeling of advanced coal conversion processes: Annual report, October 1988–September 1989, 16:13984 (R;US)

Meetings
Proceedings of the tenth annual gasification and gas stream cleanup systems contractors review meeting: Volume 2, 16:13953 (R;US)
Proceedings of the tenth annual gasification and gas stream cleanup systems contractors review meeting: Volume 1, 16:13952 (R;US)

Methane
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Pyrolysis
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)

Research Programs
Undergraduate research studies program at participating institutions of the HBCU Fossil Energy Consortium: Quarterly report, September 30, 1989–December 29, 1989, 16:13992 (R;US)

Technology Assessment
Status of gasification demonstration plants, 16:13950 (RA;US)
Task 4, Mild gasification technology development system integration studies, April 1989–September 1990, 16:13948 (R;US)

COAL INDUSTRY
Black coal 1990. Annual report of the Gesamtverband des Deutschen Steinkohlenbergbaus, 16:14732 (I;DE;In German)
Ruhrkohle AG. Business report 1989, 16:14046 (I;DE;In German)
US energy industry financial developments, 1990 fourth quarter, 16:14730 (R;US)

COAL LIQUEFACTION
Fundamental studies in production of C_2-C_4 hydrocarbons from coal: Progress report No. 8, June 1, 1990–August 31, 1990, 16:13960 (R;US)
Novel process for depolymerization of coal to C_2-C_4 hydrocarbons: Progress report No. 4, June 1, 1990–August 31, 1990, 16:13966 (R;US)
Novel process for depolymerization of coal to C_2-C_4 hydrocarbons: Progress report No. 5, September 1, 1990–November 30, 1990, 16:13965 (R;US)
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, September–November 1990, 16:13955 (R;US)
Slurry reactor design studies: Slurry vs. fixed-bed reactors for Fischer-Tropsch and methanol: Final report, 16:13967 (R;US)
The potential for coal liquefaction: Supporting analysis for the National Energy Strategy, 16:14048 (R;US)

Undergraduate research studies program at participating institutions of the HBCU Fossil Energy Consortium: Quarterly report, September 30, 1989–December 29, 1989, 16:13992 (R;US)

COAL LIQUIDS
Configurational diffusion of coal macromolecules: Quarterly progress report, December 15, 1990–March 15, 1991, 16:13974 (R;US)
Fundamental studies of catalytic processing of synthetic liquids: Quarterly progress report, September 1, 1990–December 31, 1990, 16:13964 (R;US)
Indirect electrolysis process for removal of pollutants from coal liquids: Quarterly report, October 1, 1990–December 31, 1990, 16:13957 (R;US)
Stable carbon isotope analysis of coprocessing materials: Quarterly technical progress report, January 1–March 31, 1990, 16:13986 (R;US)
Synthesis of model compounds for coal liquefaction research: Quarterly report No. 3, October 15, 1990–January 14, 1991, 16:13971 (R;US)
Synthesis of model compounds for coal liquefaction research: Quarterly report No. 2, July 14, 1990–October 14, 1990, 16:13972 (R;US)
Task 4, Mild gasification technology development system integration studies, April 1989–September 1990, 16:13948 (R;US)
The potential for coal liquefaction: Supporting analysis for the National Energy Strategy, 16:14048 (R;US)
Thermodynamic model for calorimetric and phase coexistence properties of coal derived fluids: Annual report, 16:13988 (R;US)

COAL MINES
Changes of coal mine safety, 16:14049 (IA;JP;In Japanese)
Present state of R and D projects for coal mine safety, 16:14050 (IA;JP;In Japanese)
Technical progress of coal mining engineering, 16:14013 (IA;JP;In Japanese)

COAL MINING
Development of instrumentation for guided long-hole drilling: Final report, 16:14015 (R;LU)
Present study for coal mining production, 16:14014 (IA;JP;In Japanese)

COAL PREPARATION
See also LICADO PROCESS
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Development of a coal quality expert: Technical progress report No. 2, [July 1–September 30, 1990], 16:14485 (R;US)
Engineering design and analysis of advanced physical fine coal cleaning technologies: Quarterly technical progress report No. 5, October–December 1990, 16:13939 (R;US)

COAL PREPARATION PLANTS
Molten-Caustic-Leaching System Integration Project: Technical progress report, quarter ending December 28, 1990, 16:13975 (R;US)
On the history of coal preparation technology in Japan, 16:13943 (IA;JP;In Japanese)
Selective flotation of fossil resin from western coal: Quarterly report, August 1, 1990–November 30, 1990, 16:13942 (R;US)

COAL RANK
Development of coal hydrogenation, 16:13976 (IA;JP;In Japanese)
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)

COAL TAR
A mathematical model for tar release in rapid devolatilization of a softening bituminous coal: Final technical progress report, 16:14027 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COBALT
Probe molecule studies: Active species in alcohol synthesis: First quarterly report, September 1990–December 1990, 16:14400 (R;US)

COBALT 59 TARGET
Analysis of experimental data on neutron-induced reactions and development of code PCROSS for the calculation of differential pre-equilibrium emission spectra with modelling of level density function: Final report on research contract 5472/RB, 16:15725 (R;XA)
Gamma ray emission from multistep compound reactions, 16:15729 (RA;XA)

COBALT 60
Reconstruction of dose equivalents to the public from the ^{60}Co Irradiator Facility at the Laboratory for Energy-Related Health Research, 16:15385 (R;US)

COBALT OXIDES
Development of improved cathodes for solid oxide fuel cells, 16:14771 (RA;US)

COCOA PRODUCTS
Radiation disinfestation of grains and cocoa beans, 16:15375 (RA;XA)

COGENERATION
Experiences, expectations and potentials in relation to industrial cogeneration, 16:14124 (IA;DK;In Danish)
Gasification of straw, 16:14390 (IA;DK;In Danish)
Heat and power production at I/S Amagerforbraending, 16:14718 (IA;DK;In Danish)
Power plants: Experience, expectations and potentials, 16:14717 (IA;DK;In Danish)
Straw-firing, 16:14389 (IA;DK;In Danish)

COHERENT ANTI-STOKES RAMAN SPECTROSCOPY
See RAMAN SPECTROSCOPY

COINCIDENCE SPECTROMETRY
Kinematically complete measurements of the break-up of ^{6}Li using the magnetic spectrograph 'Little John', 16:15174 (R;DE;In German)

COKE
Development of a coking indicator for oil shales, 16:14175 (RA;US)
Fuel briquettes with combustion inhibitor and method of making same, 16:14084 (PA;CA)
Inhibition of retrogressive reactions in coal/petroleum coprocessing: Quarterly technical progress report, September 1, 1990–November 30, 1990, 16:13959 (R;US)
Microscopic techniques for identification of coke, 16:14180 (RA;US)
Mild gasification technology development process: Task 3, Bench-scale char upgrading study, February 1988–November 1990, 16:13983 (R;US)

COKE OVENS
Innovative coke oven gas cleaning system for retrofit applications: Quarterly technical progress report No. 2, April 1, 1990–June 30,1990, 16:13961 (R;US)

COKE-OVEN GAS
See COAL GAS

COLD PLASMA
Thermal effects in relativistic plasmas, 16:15920 (R;GB)

COLD STORAGE
Deep-freeze store with low energy consumption: Closing report, 16:14846 (R;CH;In German)

COLLIDING BEAMS
Longitudinal instability thresholds of counter-rotating pp-bar or ee-bar beams in a collider, 16:15146 (R;SU)

COLLIERIES
See COAL MINES

COLOGNE SPIRITS
See ETHANOL

COLORADO
Environmental and health surveillance monitoring results at Parachute Creek Shale Oil Project, 1988 and 1989, 16:14192 (RA;US)

Solute transport modeling for the preliminary design of shallow aquifer restoration scenarios at the Grand Junction, Colorado UMTRA project site, 16:14339 (IA;CA)

COLUMBIA RIVER
Hanford Environmental Dose Reconstruction Project monthly report, February 1991, 16:15251 (R;US)
Radiological characterization of skyshine from a retired, low-level, radioactive liquid effluent disposal facility at Hanford, 16:15330 (R;US)

COLUMBIA RIVER BASIN
Assessment of the fishery improvement opportunitites on the Pend Oreille River: 1989 Annual report, 16:15333 (R;US)

COLUMNS (EXTRACTION)
See EXTRACTION COLUMNS

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Air-blown Integrated Gasification Combined Cycle demonstration project: Comprehensive report to Congress: Clean Coal Technology Program, 16:14484 (R;US)
An investigation into the feasibility of a radiant recuperative air heater for a magnetohydrodynamic/steam power plant, 16:14483 (R;US)
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
High temperature gas cleaning system study: Substudy 2.3: Alkali metals and other trace elements, 16:14002 (R;NL;In Dutch)
Research and development of the pressurized fluidized bed combusiton combined cycle, 16:14036 (IA;JP;In Japanese)

COMBUSTION PRODUCTS
Coal reburning for cyclone boiler NO_x control demonstration: Quarterly report No. 2, July–September 1990, 16:13998 (R;US)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 13, October 1–December 31, 1990, 16:14492 (R;US)
Greenhouse gas emissions from energy production and consumption in Finland, 16:15240 (R;FI;In Finnish)

COMBUSTORS
See also CATALYTIC COMBUSTORS
CYCLONE COMBUSTORS
FLUIDIZED-BED COMBUSTORS
An evaluation of a pre-charging pulse-jet filter for small combustor particulate control: Project quarterly report, March–May 1990, 16:13999 (R;US)
Autoignition and flameholding in a cylindrical scramjet combustor, 16:14872 (R;JP;In Japanese)
Combustion test of C.P.C. boiler simulator step II, 16:14035 (IA;JP;In Japanese)
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Experiment on supersonic turbulent mixing layers.: Supersonic-subsonic two-stream layers, 16:14871 (R;JP;In Japanese)
Hydrogen fueled subsonic-ram-combustor model tests for an air-turbo-ram engine, 16:14878 (R;JP)
TRW Utility Demonstration Unit: Quarterly progress report, August–October 1990, 16:14026 (R;US)
The magnetohydrodynamics Coal-Fired Flow Facility: Technical progress report, July 1, 1990–September 30, 1990, 16:14748 (R;US)
Thermal reactor for heaters and fuel generators, 16:15043 (PA;CA)

COMMERCIAL BUILDINGS
A tool for estimating the mix of energy conservation measures given competing acquisition scenarios, 16:14826 (R;US)
Development of a high-efficiency, gas-fired, absorption heat pump for residental and small-commercial applications: Phase 1, Final report: Analysis of advanced cycles and selection of the preferred cycle, 16:14820 (R;US)
Significant ELCAP analysis results: Summary report: End-Use Load and Consumer Assessment Program, 16:14822 (R;US)

COMPACT IGNITION TOKAMAK
ICRF sawtooth stabilization: Application on TFTR and CIT, 16:15918 (R;US)

COMPONENT COOLING SYSTEMS
See AUXILIARY WATER SYSTEMS

COMPOSITE MATERIALS

A novel process for methanol synthesis: Progress report, June 1, 1990–August 31, 1990, 16:14399 (R;US)

COPPER ORES
Development of the Arc Shattering concept of energy efficient comminution of hard materials: Final report, 16:14842 (R;US)

COPPER OXIDES
Diffusion in $YBa_2Cu_3O_{7-\delta}$, 16:14937 (R;US)
Electron and gamma irradiation effects on properties of high temperature oxide metal ceramics, 16:14927 (IA;SU;In Russian)
Fermi surface of YBCO by DHVA, 16:14932 (R;US)
Hot gas desulfurization with sorbents containing oxides of zinc, iron, vanadium and copper: Quarterly technical progress report, [October–December 1990], 16:13973 (R;US)
Microstructure of epitaxial $YBa_2Cu_3O_7$ thin films, 16:14930 (R;US)
Practical superconductor development for electrical power applications: Annual report for FY 1990, 16:14922 (R;US)
Re-analysis of photoemission data for CuO: Revision of the configuration-energy scheme for cuprate materials, 16:14931 (R;US)
Theory of the critical current density in $YBa_2Cu_3O_7$ ceramics, 16:14924 (R;US)

COPPER SELENIDES
Laser Raman and luminescence spectroscopy, 16:14416 (RA;US)
Polycrystalline thin films, 16:14414 (RA;US)

COPPER VAPOR LASERS
See METAL VAPOR LASERS

CORALS
Shapes and textures for rendering coral, 16:15999 (R;US)

CORES (REACTOR)
See REACTOR CORES

CORN (MAIZE)
See MAIZE

CORN STOVER
See MAIZE

CORONA (SOLAR)
See SOLAR CORONA

COSMIC PARTICLES
See COSMIC RADIATION

COSMIC RADIATION
Ultrahigh-energy particles from cosmic strings, 16:15461 (R;US)
COSMOLOGICAL CONSTANT
A new mechanism for neutralizing the cosmological constant, 16:15460 (R;US)
COSMOLOGICAL MODELS
Biaxial Bianchi type 9 quantum cosmology, 16:15459 (R;US)
Cosmology of the standard model dilaton, 16:15471 (R;DK)
COSMOS
See UNIVERSE
COSO HOT SPRINGS
Geothermal energy development in the Pacific northwest, 16:14435 (RA;US)
COSTA RICA
The peats of Costa Rica: Volume 2, Resource assessment, 16:14012 (R;US)
COTTON
Characterization of rhamnogalacturonan I from cotton suspension culture cell walls: [Progress report], 16:15338 (R;US)
COULOMB SCATTERING
A particle-in-cell method for modeling small angle Coulomb collisions in plasmas, 16:15872 (R;US)
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUPLE CORROSION
See ELECTROCHEMICAL CORROSION
COUPLINGS (MACHINE PARTS)
See MACHINE PARTS
CRANES
Seismic requalification of a safety class crane, 16:14330 (R;US)
CREEKS
See STREAMS
CRITICAL ASSEMBLIES
See ZERO POWER REACTORS
CRITICAL HEAT FLUX
CHF-KFK-3: A critical heat flux correlation for triangular arrays of rods with tight lattices, 16:14523 (R;DE)
CRITICALITY
Generic criticality safety issues, 16:14226 (R;US)
Savannah River Site new NIM design, 16:14347 (R;US)
CRITICALITY ACCIDENTS
See CRITICALITY
RADIATION ACCIDENTS
CROSS SECTIONS
Autoignition and flameholding in a cylindrical scramjet combustor, 16:14872 (R;JP;In Japanese)
CROSSED BEAMS
See COLLIDING BEAMS
CROSSFLOW COOLING TOWERS
See CROSSFLOW SYSTEMS
CROSSFLOW SYSTEMS
Modelling and simulation of a crossflow heat exchanger, 16:15033 (R;SE;In Swedish)
CROWN ETHERS
See POLYETHYLENE GLYCOLS
CRUDE OIL
See PETROLEUM
CRYSTAL GROWTH
Stability and servo-control of the crystal pulling process, 16:15821 (R;NO)
CUMULATIVE EFFECT
See PARTICLE PRODUCTION
CURIUM 248 TARGET
Calculation of cross sections for binary reactions between heavy ion projectiles and heavy actinide targets, 16:15750 (R;US)
CURIUM IONS
Synergistic extraction of trivalent actinides and lanthanides using HTTA and an aza-crown ether, 16:14963 (R;US)
CURRENT ALGEBRA
Simple WZW currents, 16:15643 (R;NL)
CURRENTS (ELECTRIC)
See ELECTRIC CURRENTS
CUSP
See CUSPED GEOMETRIES
CUSPED GEOMETRIES
Electron transverse transport in a multigap electromagnetic trap with axisymmetric magnetic field, 16:15899 (IA;SU;In Russian)
Influence of motion nonadiabaticity on particle kinetics in cusped magnetic trap, 16:15898 (IA;SU;In Russian)
CYCLONE COMBUSTORS
Coal reburning for cyclone boiler NO_x control demonstration: Quarterly report No. 2, July–September 1990, 16:13998 (R;US)
CYCLONE SEPARATORS
Evaluation, engineering and development of advanced cycloning processes: Quarterly technical progress report No. 1, September 27, 1990–December 31, 1990, 16:13941 (R;US)
CYCLOPENTADIENE
Energy partitioning in elementary reactions: Progress report, November 1, 1989–October 31, 1990, 16:14990 (R;US)
CYLINDERS
Benchmarking numerical predictions with force and moment measurements on slender, supercavitating bodies, 16:15517 (R;US)
Charge/discharge characteristics of high-capacity methane adsorption storage systems, 16:14130 (R;US)
CYLINDRICAL PARABOLIC COLLECTORS
See PARABOLIC TROUGH COLLECTORS
CYSTEAMINE
See MEA
CYTOSTATICS
See ANTIMITOTIC DRUGS
CYTOTOXINS
See ANTIMITOTIC DRUGS
CZOCHRALSKI METHOD
Stability and servo-control of the crystal pulling process, 16:15821 (R;NO)

D

D MESONS
See also D MINUS MESONS
Form factor analysis and unitarity effects in $D \rightarrow K^* l\nu$, 16:15567 (R;DE)
D MINUS MESONS
Observation of the decays $D_s^- \rightarrow \phi e^-$anti ν and $D^- \rightarrow K^{*0} e^-$anti ν, 16:15530 (R;DE)
D PLUS RESONANCES
See D MESONS
D RESONANCES
See CHARMED MESONS
D S MESONS
Observation of the decays $D_s^- \rightarrow \phi e^-$anti ν and $D^- \rightarrow K^{*0} e^-$anti ν, 16:15530 (R;DE)
D* PLUS RESONANCES
See BARYONS
D* ZERO RESONANCES

DAIRY INDUSTRY
The use of a mechanical vapour recompression (energy-saving) evaporator to concentrate acid casein whey. Demonstration project, 16:14853 (R;FR)
DAPHNIA
Chronic toxicity evaluation of the Savannah River Site DETF discharges and three locations on Tims Branch: Final report, 16:15308 (R;US)
DARK REPAIR
See BIOLOGICAL REPAIR
DATA ACQUISITION
Development of new data acquisition system at the SF cyclotron facility, 16:15123 (R;JP;In Japanese)

DATA ANALYSIS
Analysis of neutron noise spectra using neural networks, 16:14575 (R;US)
DATA BASE MANAGEMENT
Applications: Still the DBA's security blanket, 16:16027 (R;US)
Security aspects of database management systems, 16:16023 (R;US)
The Cheetah Data Management System, 16:16025 (R;US)
The intelligent database: Using INGRES to manage the external analysis of your data, 16:16026 (R;US)
DATA PROCESSING
ENDF/B Pre-Processing Codes: Implementing and testing on a Personal Computer, 16:16007 (R;XA)
Implementing and testing program PLOTTAB, 16:15979 (R;XA)
Information dynamics of self-programmable matter, 16:15988 (R;US)
Program PLOTTAB. (Version 87-2). General plotting program to plot any combination of continuous curves and/or discrete points (with associated error bars), 16:15978 (R;XA)
Studies on the track reconstruction and on the accuracy of the track parameters in the OPAL jet chamber, 16:15158 (R;DE;In German)
Using neural networks to identify jets in hadron-hadron collisions, 16:15569 (R;DE)
DATA TRANSMISSION
EXFOR Manual. Center-to-Center Exchange Format. Version 89-1, 16:16013 (R;XA)
DAUGHTER PRODUCTS
Experimental studies on lung carcinogenesis and their relationship to future research on radiation-induced lung cancer in humans, 16:15430 (R;US)
DAYLIGHTING
State of the art of R+D into natural light in the United States, 16:14805 (R;CH;In French)
DC TO DC CONVERTERS
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
DECALSO
See ION EXCHANGE MATERIALS
DECAY
See also NUCLEAR DECAY
PARTICLE DECAY
SPONTANEOUS FISSION
Optimal choice of basis functions in the linear regression analysis, 16:15589 (IA;SU;In Russian)
DECAY PRODUCTS
See DAUGHTER PRODUCTS
DECISION TREE ANALYSIS
On the use of fuzzy logics in the operator support system of an experimental facility, 16:14587 (R;SU;In Russian)
DECONTAMINATION
Electrolytic decontamination of transuranic wastes by alternating electrolysis, 16:14287 (R;JP;In Japanese)
DECONTAMINATION FACTOR
See DECONTAMINATION
DEEP INELASTIC SCATTERING
A note on gluon distribution at small x, 16:15563 (R;DE)
Deep inelastic transfers: a way to dissipate energy and angular momentum for reactions in the Fermi energy domain, 16:15745 (R;FR)
DEFORMED NUCLEI
Superdeformation at and above the Yrast, 16:15693 (R;FR)
DEGRADATION (NUCLEAR)
See DECAY
DEHUMIDIFIERS
Development of an energy efficient desiccant dehumidifier: Final report, 16:14792 (R;US)
DELAYED RADIATION INJURIES
See RADIATION INJURIES
DELETIONS (CHROMOSOMAL)
See CHROMOSOMAL ABERRATIONS
DELTA BARYONS
The quenched spectrum with staggered fermions, 16:15573 (R;US)
DELTA RESONANCES (MESON)
See MESONS
DELTA-2850 RESONANCES
See DELTA BARYONS
DEMONSTRATION PROGRAMS
Nonnuclear energies: European Working Group on Solar Thermal Plant Monitoring: Proceedings of the 1st and 2nd meeting, 16:14406 (R;LU)
DENMARK
A technical-economic model for the industrial energy consumption and energy related CO_2, SO_2 and NO_x emissions: INDUS version 2. EMIS, 16:14721 (R;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Text, 16:14477 (R;DK;In Danish)
Extreme values of wind speeds in Denmark, 16:15254 (R;DK)
Power plants: Experience, expectations and potentials, 16:14717 (IA;DK;In Danish)
The Danish Energy Agency: Experience, expectations and potentials, 16:14704 (IA;DK;In Danish)
DENSITY (ELECTRON)
See ELECTRON DENSITY
DENSITY (ENERGY-LEVEL)
See ENERGY-LEVEL DENSITY
DENSITY (PLASMA)
See PLASMA DENSITY
DEOXYPENTOSE NUCLEIC ACID
See DNA
DEOXYRIBONUCLEIC ACID
See DNA
DEPLETED URANIUM
A new approach to uranium chemistry completing the nuclear fuel cycle, 16:14225 (IA;CA)
DEPLETION (NUCLEAR FUELS)
See BURNUP
DESERTRON
See SUPERCONDUCTING SUPER COLLIDER
DESIGN BASIS ACCIDENTS
Licensing design basis source term update for the Evolutionary Advanced Light Water Reactor: Advanced Reactor Severe Accident Program, 16:14623 (R;US)
DESOXYRIBONUCLEIC ACID
See DNA
DESULFURIZATION
Environmental monitoring for the DOE coolside and LIMB demonstration extension projects: Final report for the period of October, November, December 1989 and January 1990, 16:14493 (R;US)
Support study for the development of an entrained-bed coal gasification power generation plant. II.: Development of hot gas desulfurization process, 16:13978 (IA;JP;In Japanese)
Utilization tests of fly ash stabilized by Poz-o-Tec system, 16:14005 (IA;JP;In Japanese)
DETECTORS (RADIATION)
See RADIATION DETECTORS
DETONATORS
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
DEUTERIUM
Absence of molecular deuterium dissociation during room-temperature permeation into polystyrene ICF target shells, 16:15925 (R;US)
DEUTERIUM OXIDES
See HEAVY WATER
DEUTERIUM TARGET
Deuteron electrofission in forward direction at a four-momentum transfer of Q^2=0.12 $(GeV/c)^2$, 16:15675 (R;DE;In German)
Report to the DOE Nuclear Data Committee, 1991, 16:15682 (R;US)
DEUTERON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
DEUTERONS
Computed secondary-particle energy spectra following nonelastic neutron interactions with ^{12}C for E_n between 15 and 60

MeV: Comparisons of results from two calculational methods, 16:15756 (R;US)
Fast deuteron production in proton-nuclear interactions, 16:15748 (R;SU;In Russian)

DEWATERING EQUIPMENT
Development of the Electroacoustic Dewatering (EAD) process for fine/ultrafine coal: Ninth quarterly progress report, period ending December 31, 1990, 16:13937 (R;US)

DIAMOND DRILLING EQUIPMENT
See DRILLING EQUIPMENT

DIAPHRAGMS (THERMONUCLEAR DEVICE)
See LIMITERS

DIESEL ENGINES
Catalyst for purification of exhaust gas from diesel engine, 16:14885 (PA;CA)
Development and evaluation of a three-dimensional fuel spray model for reciprocating engines: Final report, 16:14876 (R;LU)
Low heat rejection diesel ceramic coupon tests, 16:14874 (R;US)
Process for purifying exhaust gas and catalyst molded article for use in it, 16:14884 (PA;CA)
Twelfth annual report to Congress on the Automotive Technology Development Program: Annex No. 2, 16:14702 (R;US)

DIESEL FUELS
Development and evaluation of a three-dimensional fuel spray model for reciprocating engines: Final report, 16:14876 (R;LU)
Fuel oil compositions, 16:14098 (PA;CA)
Fuel oil compositions, 16:14099 (PA;CA)
Process to upgrade the cetane index of gas-oil mixtures obtained by direct distillation, 16:14083 (PA;CA;In French)

DIESEL MOTORS
See DIESEL ENGINES

DIESEL OIL (FRACTION)
See DIESEL FUELS

DIFFERENTIAL EQUATIONS
See also NEUTRON DIFFUSION EQUATION
PARTIAL DIFFERENTIAL EQUATIONS
Optimization and resolution of Lourie's equations, 16:15848 (R;XA;In French)

DIFFRACTION GRATINGS
The grating as an accelerating structure, 16:15087 (R;US)

DIFFUSION BARRIERS
Demonstration of the Polymeric Barrier System (PBS) for site specific interim control applications at the Feed Materials Production Center, Fernald, Ohio and the Savannah River Plant, Aiken, South Carolina, 16:14338 (R;US)

DIGESTER GAS
See METHANE

DIMETHYL KETONE
See ACETONE

DIODE TRANSISTORS
See TRANSISTORS

DIOXIN
Indirect pathways as the primary source of human exposure to emissions from a Minnesota Municipal Waste Combustor, 16:15434 (R;US)

DIRAC EQUATION
Dirac equation in Foldy-Wouthuysen representation (expansion in terms of charge e powers), 16:15624 (IA;SU;In Russian)
Vacuum currents around a magnetic fluxstring, 16:15646 (R;NO)

DIRAC MONOPOLES
See MAGNETIC MONOPOLES

DIRECT REACTIONS
See also TRANSFER REACTIONS
Alternative statistics in multi-step direct reaction theory, 16:15715 (R;NL)

DIRECTIONAL DRILLING
Controlled path drill tool equipped with a variable geometry stabilizer and utilization of said tool, 16:14069 (PA;CA;In French)
Method and apparatus to receive and transmit signals in wells, especially horizontal wells, 16:15196 (PA;CA;In French)

DISARMAMENT
See ARMS CONTROL

DISCRIMINATORS
The RAL 10 discriminator, 16:15191 (R;GB)

DISINTEGRATION (NUCLEAR)
See DECAY

DISPERSANTS (CHEMICAL)
See SURFACTANTS

DISPLACEMENT GAGES
A submicron resolution monolithic capacitive displacement sensor with digital output: Final report, 16:15203 (R;US)

DISSOLUTION
Overview of chemical modeling of nuclear waste glass dissolution, 16:14314 (R;US)

DISSOLVED OXYGEN
See OXYGEN

DISTILLATE FUEL
See HEATING OILS

DISTILLATE FUEL OIL
See HEATING OILS

DISTRICT COOLING
District heating and cooling feasibility study, Dunkirk, New York: Phase 1: Final report, 16:14870 (R;US)

DISTRICT HEATING
See also GEOTHERMAL DISTRICT HEATING
District heating and cooling feasibility study, Dunkirk, New York: Phase 1: Final report, 16:14870 (R;US)
Information day on wood chip, and coal/wood chip fired district heating plants with flue gas condensing, 16:14387 (I;DK;In Danish)
Radiation-hygienic assessment of heat supply from Beloyarsk NPP, 16:15789 (IA;SU;In Russian)
Straw management: Techniques, economy and organization, 16:14381 (I;DK;In Danish)
Vester Nebel combined collective heat supply system. Demonstration project, 16:14867 (R;FR)

DIVERTORS
Hydrogen transport behavior of metal coatings for plasma facing components, 16:15941 (R;US)
Ion beam testing of the Aerolor X-point dump plate for the Joint European Torus, 16:15951 (R;US)

DNA
Analysis of DNA blood plasma as a test of early diagnosis of radiation injuries, 16:15400 (IA;SU;In Russian)
[Structure and stability of nucleic acids]: Progress report, July 1, 1985–June 30, 1988, 16:15340 (R;US)

DOCUMENT RETRIEVAL
See INFORMATION RETRIEVAL

DOCUMENTATION
HEART handbook for guest editors, 16:16024 (R;US)

DOMESTIC WASTES
See MUNICIPAL WASTES

DOPED MATERIALS
Electronic properties of Si-doped n-doping-intrinsic-p-doping-intrinsic (nipi) structures in GaAs, 16:14956 (R;US)
Molten carbonate fuel cell research, 16:14761 (RA;US)

DORMITORIES
See RESIDENTIAL BUILDINGS

DOSE LIMITS
The nuclear fuel cycle and federal regulation, including future trends, 16:14543 (IA;CA)

DOSE RATES
Radiological characterization of skyshine from a retired, low-level, radioactive liquid effluent disposal facility at Hanford, 16:15330 (R;US)

DOSE REDUCTION FACTOR
See RADIOPROTECTIVE SUBSTANCES

DOSE RELATIVE FACTOR
See RADIOPROTECTIVE SUBSTANCES

DOSIMETRY
See also NEUTRON DOSIMETRY
General analytical solution of basic task of indirect dosimetry, 16:15797 (IA;SU;In Russian)
Indirect dosimetry of internal irradiation due to radionuclide inhalation, 16:15798 (IA;SU;In Russian)
Statistical analysis of model of aerosol deposition in lungs and standardization of radionuclide aerogenic intake, 16:15799 (IA;SU;In Russian)

DOUBLE ENVELOPE BUILDINGS
Building Thermal Envelope Systems and Materials (BTESM): Progress report for DOE Office of Buildings Energy Research, 16:14821 (R;US)
DOUBLE FOCUSING SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
DOUBLE GLAZING
Device for mounting insulating double-glazing onto a fixed frame, 16:14834 (PA;CA)
DOUBLE SHELL HOUSES
See DOUBLE ENVELOPE BUILDINGS
DOUBLE WALL HOUSES
See DOUBLE ENVELOPE BUILDINGS
DOUBLET 3 DEVICES
See DOUBLET REACTORS
DOUBLET REACTORS
An edge density fluctuation diagnostic for DIII-D using lithium beams: Technical progress report, [March 15, 1990–August 15, 1990], 16:15890 (R;US)
DOWNHOLE INFORMATION SYSTEMS
See MWD SYSTEMS
DRELL MODEL
Nuclear effects in Drell-Yan and quarkonium production in proton-nucleus collisions, 16:15550 (R;US)
DRF
See RADIOPROTECTIVE SUBSTANCES
DRIFT CHAMBERS
Construction and test of a drift-chamber track trigger for the central track chamber of the H1 detector, 16:15161 (R;DE;In German)
Construction and test of the full-size prototype for the central jet chamber of the H1 detector, 16:15160 (R;DE;In German)
Studies on the track reconstruction and on the accuracy of the track parameters in the OPAL jet chamber, 16:15158 (R;DE;In German)
The RAL 10 discriminator, 16:15191 (R;GB)
The laser calibration of the ZEUS forward drift chambers: Studies of the electron drift in the inhomogeneous magnetic field, 16:15157 (R;DE;In German)
The optimization of the electrostatic field inside the ZEUS forward drift chambers: Calculations and measurements, 16:15159 (R;DE)
DRILL HOLES
See BOREHOLES
DRILL SHIPS

SHIPS
DRILLING EQUIPMENT
Drill string equipment information sequence remote control method and device, 16:15047 (PA;CA;In French)
DRILLING FLUIDS
Evaluation of saponite and saponite/sepiolite fluids for geothermal drilling, 16:14458 (R;US)
Monitoring drilling mud, 16:14074 (PA;CA)
Monitoring drilling mud composition using flowing liquid junction electrodes, 16:14071 (PA;CA)
Monitoring drilling mud composition using ion selective electrodes, 16:14070 (PA;CA)
Practical guide for testing and maintenance of high temperature drilling fluids during drilling, coring, logging, and cementing wellbores, 16:15045 (R;US)
Simplified toxicity testing of drilling muds I: Marine phytoplankton Skeletonema costatum grown in test tubes, 16:14095 (R;NO)
DRILLING MUD
See DRILLING FLUIDS
DRILLING PLATFORMS
See OFFSHORE PLATFORMS
DRILLING RISERS
See MARINE RISERS
DRINKING WATER
Evaluation of groundwater monitoring at offsite nuclear test areas, 16:15294 (R;US)
DROPLETS
Tropospheric sampling with aircraft, 16:15220 (R;US)
DRY-STEAM SYSTEMS
See VAPOR-DOMINATED SYSTEMS
DRYERS
Design and control of energy efficient drying processes with specific reference to foods: Quarterly report, July 1, 1987–October 1, 1987, 16:15360 (R;US)
Design and control of energy efficient drying processes with specific reference to foods: Technical progress report, April 1, 1986–June 30, 1986, 16:15357 (R;US)
Design and control of energy efficient drying processes with specific reference to foods: Quarterly report, July 1, 1987–October 1, 1987, 16:15360 (R;US)
Design and control of energy efficient food drying processes with specific reference to quality; Model development and experimental studies: Moisture movement and dryer design: Phase 2, Final report, July 1, 1987–August 31, 1989, 16:15355 (R;US)
Dimensioning and use of near-ambient drier, 16:14860 (R;FI;In Finnish)
Proof of concept and performance optimization of high gravity batch type centrifuge for dewatering fine coal: Quarterly technical progress report No. 5 revised, September 21, 1990–December 20, 1990, 16:13938 (R;US)
Research and development of industrial drying concepts using a superheated steam atmosphere with exhaust recompression: Phase 1, Final report, October 1989–December 1990, 16:14841 (R;US)
DRYING
Design and control of energy efficient drying processes with specific reference to foods: Technical progress report, October 10, 1986–December 31, 1986, 16:15359 (R;US)
Design and control of energy efficient food drying processes with specific reference to quality; Model development and experimental studies: Moisture movement and dryer design: Phase 2, Final report, July 1, 1987–August 31, 1989, 16:15355 (R;US)
DTO
See HEAVY WATER
TRITIUM COMPOUNDS
DUCTS
Theoretical approach for enhanced mass transfer effects in-duct flue gas desulfurization processes: Quarterly report No. 10, October 1, 1990–December 31, 1990, 16:13997 (R;US)
DUST COLLECTORS
Support study for the development of an entrained-bed coal gasification power generation plant. III.: Development of high temperature dry-type dust separator, 16:13979 (IA;JP;In Japanese)
DYE LASERS
Polymeric-host sulforhodamine-B lasers: Doubled Nd:YAG pumped, 16:15051 (R;US)

ELECTRON ACCEPTOR
See ELECTRONS

ELECTRON ANTINEUTRINOS
Experiments proposed on low-energy ν-tilde$_e$ physics at pik-type research reactors, 16:15541 (R;SU)

ELECTRON BEAMS
Current limits for axially symmetrical electron beams with nonuniform current density radial distribution, 16:15094 (R;UA;In Russian)
Possibilities of beam monitoring with TV technique using optimal radiation from a flying wire scanner, 16:15119 (R;SU;In Russian)

ELECTRON CHANNELING
Anisotropy of relativistic lepton coherent scattering at axial channeling, 16:15805 (R;SU;In Russian)

ELECTRON CONFIGURATION (ATOMS)
See ELECTRONIC STRUCTURE

ELECTRON COOLING
A collector testbench for electron coolers, 16:15127 (R;DE;In German)

ELECTRON DENSITY
Electron density fluctuation measurements in the TORTUR tokamak, 16:15891 (I;NL)
Inversion of chordal data from the ATF torsatron, 16:15914 (R;US)

ELECTRON DONOR
See ELECTRONS

ELECTRON GUNS
Emittance correction of photocathode gun, 16:15103 (R;US)

ELECTRON REACTIONS
Deuteron electrofission in forward direction at a four-momentum transfer of Q^2=0.12 (GeV/c)^2, 16:15675 (R;DE;In German)

ELECTRON SPECTROMETERS
Double electron spectrometer, 16:15177 (R;SU;In Russian)
LVDT with conditioner for control of step-engine drivers: Part of the sliding-foil system of the Emin spectrometers, 16:15185 (R;NL;In Dutch)

ELECTRON-ATOM COLLISIONS
Empirical determination of effective charges in electron impact ionisation, 16:15507 (R;GB)

ELECTRON-ION COLLISIONS
Excitation collision strengths, cross sections and rate coefficients for OV, SiXI, FeXXIII, MoXXXIX by electron impact ($1s^22s^2$-$1s^22s2p_1s^22p^2$ transitions), 16:15502 (R;JP)
Low-energy collisions of multiply charged ions with electrons, atoms and surfaces, 16:15484 (R;US)

ELECTRON-POSITRON INTERACTIONS
A search for substructure of leptons and quarks with the CELLO detector, 16:15531 (R;DE)
Baryon pair production in e^+e^- annihilation at $\sqrt{s}$ = 2.4 GeV, 16:15548 (R;FR)
Cross sections for five jet production above the W^+W^- threshold in e^+e^- annihilation, 16:15608 (R;GB)
Five jet production in e^+e^- annihilation above the W^+W^- threshold, 16:15607 (R;GB)
Fractal dimensions from a 3-dimensional intermittency analysis in e^+e^- annihilation, 16:15561 (R;DE)
Intermittency in e^+e^- -annihilation at PEP-PETRA energies, 16:15599 (R;SE)
Limit on tau neutrino magnetic moment from neutrino counting, 16:15572 (R;US)
Observation of the decays $D_s^- \rightarrow \phi e^-$anti ν and $D^- \rightarrow K^{*0}e^-$anti ν, 16:15530 (R;DE)
On measurement of beam size in linear colliders using beamstrahlung and pair creation, 16:15096 (R;FR)
Reconstruction of semileptonic $b \rightarrow u$ decays, 16:15528 (R;DE)

ELECTRON-PROTON INTERACTIONS
Electron-state bremsstrahlung processes $ep \rightarrow \gamma ep(X)$ at HERA, 16:15566 (R;DE)
Very energetic photons at HERA, 16:15570 (R;DE)

ELECTRONIC CIRCUITS

FLUIDIZED BED BOILERS
Circulating Systems
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Coal
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Control
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Cyclone Separators
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Demonstration Plants
Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)
Demonstration Programs
Demonstration project fluidized bed boilers at AKZO Hengelo, built by Stork Boilers: A project within the framework of the Netherlands Clean Coal Program. Interim report, 16:14039 (I;NL;In Dutch)
Efficiency
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
In-Situ Processing
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Miniaturization
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Nitrogen Oxides
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Operation
Demonstration project fluidized bed boilers at AKZO Hengelo, built by Stork Boilers: A project within the framework of the Netherlands Clean Coal Program. Interim report, 16:14039 (I;NL;In Dutch)
Performance Testing
Demonstration project fluidized bed boilers at AKZO Hengelo, built by Stork Boilers: A project within the framework of the Netherlands Clean Coal Program. Interim report, 16:14039 (I;NL;In Dutch)
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Pollution Abatement
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)
Power Range 10-100 Mw
Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)
Recycling
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)
Reliability
Research into a low-polluting, compact, high-efficiency fluidized bed boiler capable of handling different coals, 16:14037 (IA;JP;In Japanese)
Thermal Efficiency
Suitable coal for circulating fluidized bed boilers and operating experience of a 300t/hr boiler, 16:14029 (IA;JP;In Japanese)

FLUIDIZED BEDS
Research and development of DIOS-process (the second). IV.: Outline of prereduction fluidized bed for DIOS process, 16:14034 (IA;JP;In Japanese)

FLUIDIZED-BED COMBUSTION
NO_x and N_2O formation in a pressurized bench-scale fluidized bed reactor, 16:15261 (R;SE)
PFBC-development, 16:15260 (R;SE;In Swedish)
Research and development of the pressurized fluidized bed combusiton combined cycle, 16:14036 (IA;JP;In Japanese)

FLUIDIZED-BED COMBUSTORS
Experience with conventional inelastic analysis procedures in very high temperature applications, 16:14894 (R;US)
Fluidized bed combustor test report for Proof-of-Concept Oil Shale Facility, Colorado Tract C-b, 16:14195 (R;US)
Kinetic combustion experiments in a pressurized fluidized bed, 16:14044 (R;US)
Phase composition of sintered masses formed in fluidized bed combustors, 16:14043 (R;SE)

Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)

FUEL RODS
Burnup
Intermediate neutronic report after the BN1 rods irradiations in the BR3/4C cycle: TRIBULATION Project, 16:14507 (R;BE)
Design
Fabrication and characterization of FRAGEMA design fuel rods (Standard Pellets): TRIBULATION Project, 16:14508 (R;BE)
Destructive Testing
Postirradiation examination of seven BR3 fuel rods comprising the second part of the TRIBULATION Program: TRIBULATION Project, 16:14512 (R;BE)
Fabrication
Fabrication and characterization of FRAGEMA design fuel rods (Standard Pellets): TRIBULATION Project, 16:14508 (R;BE)
Irradiation
Intermediate neutronic report after the BBR1 and BBR2 rods irradiations in the BR3/4C: TRIBULATION Project, 16:14516 (R;BE)
Intermediate neutronic report after the BN1 rods irradiations in the BR3/4C cycle: TRIBULATION Project, 16:14507 (R;BE)
Nondestructive Analysis
BR3 first phase irradiation data and intermediate examinations of BN1 fuel rods: TRIBULATION Project, 16:14506 (R;BE)
Final non destructive examinations on FGA1 fuel rods after irradiation in BR3/4D_2 core: TRIBULATION Project, 16:14513 (R;BE)
Final non destructive examinations on the BN1 fuel rod numbers 3 and 4 after their second irradiation phase: TRIBULATION Project, 16:14509 (R;BE)
Final non destructive examinations on the W1 fuel rod numbers 9, 10, 11 and 12 after their second irradiation phase: TRIBULATION Project, 16:14515 (R;BE)
Final nondestructive examinations on the BN3 fuel rod numbers 14 and 15 after their second irradiation phase: TRIBULATION Project, 16:14514 (R;BE)
Nondestructive examinations of BN3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14505 (R;BE)
Nondestructive examinations of W1 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14511 (R;BE)
Nondestructive examinations of W3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14510 (R;BE)
Post-Irradiation Examination
BR3 first phase irradiation data and intermediate examinations of BN1 fuel rods: TRIBULATION Project, 16:14506 (R;BE)
BR3 first phase irradiation data and intermediate examinations of BN3 fuel rods: TRIBULATION Project, 16:14517 (R;BE)
Final non destructive examinations on FGA1 fuel rods after irradiation in BR3/4D_2 core: TRIBULATION Project, 16:14513 (R;BE)
Final non destructive examinations on the BN1 fuel rod numbers 3 and 4 after their second irradiation phase: TRIBULATION Project, 16:14509 (R;BE)
Final non destructive examinations on the W1 fuel rod numbers 9, 10, 11 and 12 after their second irradiation phase: TRIBULATION Project, 16:14515 (R;BE)
Final nondestructive examinations on the BN3 fuel rod numbers 14 and 15 after their second irradiation phase: TRIBULATION Project, 16:14514 (R;BE)
Nondestructive examinations of BN3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14505 (R;BE)
Nondestructive examinations of W1 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14511 (R;BE)
Nondestructive examinations of W3 fuel rods after fast operational transients in BR2: TRIBULATION Project, 16:14510 (R;BE)
Postirradiation examination of seven BR3 fuel rods comprising the second part of the TRIBULATION Program: TRIBULATION Project, 16:14512 (R;BE)
FUEL SLUGS
See FUEL RODS
FUEL SLURRIES
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Demonstration test of coal-water slurry fuel as an oil substitution for industrial boilers, 16:14028 (IA;JP;In Japanese)
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
German-Canadian cooperation study on the techno-economical use of West-Canadian coal in Ontario and East Asia using DENSECOAL technology, 16:14023 (I;DE;In German)
Mechanisms of coal-water mixture combustion in fluidized beds: Final report, 16:14025 (R;US)
FUEL SUBSTITUTION
Development of a coal quality expert: Technical progress report No. 2, [July 1–September 30, 1990], 16:14485 (R;US)
FUEL SUSPENSIONS

G

GADOLINIUM OXIDES
Qualification of the B and W Mark B fuel assembly for high burnup and development of an advanced extended burnup fuel assembly design incorporating urania-gadolinia: Project summary report, 16:14504 (R;US)
GALACTIC EVOLUTION
Chemical evolution of galaxies, 16:15476 (R;DK)
GALAXIES
See also MAGELLANIC CLOUDS
MILKY WAY
The velocity dispersion gradients in spiral galaxies. Pt. 1: The galaxy and NGC 3198, 16:15470 (R;DK)
GALLIUM
Neutron transmission measurements on gallium in the resonance region, 16:15777 (R;JP)
GALLIUM ANTIMONIDES
Solid-state theory, 16:14417 (RA;US)
GALLIUM ARSENIDES
Electronic properties of Si-doped n-doping-intrinsic-p-doping-intrinsic (nipi) structures in GaAs, 16:14956 (R;US)
III-V high-efficiency photovoltaic cells, 16:14415 (RA;US)
Solid-state theory, 16:14417 (RA;US)
Strain release in GaAs/Ga_{1-x}/In_xAs strained layer superlattices grown on (112) substrates, 16:14952 (R;US)
Study and characterization of III-V semiconductor materials for applications in ionizing radiation detection, 16:14947 (R;FR;In French)
GALLIUM PHOSPHIDES
III-V high-efficiency photovoltaic cells, 16:14415 (RA;US)
Laser Raman and luminescence spectroscopy, 16:14416 (RA;US)
Solid-state theory, 16:14417 (RA;US)
GALLIUM SELENIDES
Laser Raman and luminescence spectroscopy, 16:14416 (RA;US)
Polycrystalline thin films, 16:14414 (RA;US)
GALVANIC CORROSION
See ELECTROCHEMICAL CORROSION
GAMMA DECAY
GAMCAT. Gamma and alpha rays from radioactive decay, 16:15663 (R;XA)
The ENSDF radioactivity data base for IBM-PC and computer network access, 16:15664 (R;XA)
GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS
GAMMA SOURCES
Decay data for detector efficiency calibration. Documentation of the GAMDEC DBaseIII data base, 16:15782 (R;XA)
GAMMA SPECTROMETERS
See also MOESSBAUER SPECTROMETERS
Procedures to analyse γ-ray spectra obtained from the ORTEC or nuclear data ND-680 system by ORTEC's analysis software packages incorporated into a separate IBM-PC computer, 16:15192 (R;DK)
GAMMA SPECTROSCOPY
Measurement control for calorimetric assay, 16:14349 (R;US)
GANGUE
Present state and outlook for utilization of coal ash, 16:14003 (IA;JP;In Japanese)
GAS BURNERS
Burner membrane, 16:14136 (PA;CA)
Ceramic natural gas burners: Report January-December 1989, 16:14845 (R;NL;In Dutch)
GAS CONDENSATES
Ceramic membranes for high temperature gas separation, 16:14944 (R;NL;In Dutch)
GAS COOLANTS
See GASES
GAS ENGINES
See INTERNAL COMBUSTION ENGINES
GAS HEAT PUMPS
Development of a high-efficiency, gas-fired, absorption heat pump for residental and small-commercial applications: Phase 1, Final report: Analysis of advanced cycles and selection of the preferred cycle, 16:14820 (R;US)
GAS LASERS
See also CARBON DIOXIDE LASERS
EXCIMER LASERS
METAL VAPOR LASERS
Characteristics of pulsed nuclear reactor pumped flowing gas lasers, 16:15050 (R;US)
GAS METAL-ARC WELDING
Heat and mass transfer in the gas tungsten and gas metal arc welding processes, 16:15001 (R;US)
GAS SCINTILLATION DETECTORS
Study of a gas filled detector for an experiment on double beta decay, 16:15175 (R;FR)
GAS SPILLS
Treatment of denser-than-air releases in an advection-diffusion model: Thermodynamic effects, 16:15266 (R;US)
GAS TUNGSTEN-ARC WELDING
Heat and mass transfer in the gas tungsten and gas metal arc welding processes, 16:15001 (R;US)
GAS TURBINE ENGINES
Gas motors, 16:14125 (IA;DK;In Danish)
GAS TURBINE POWER PLANTS
Availability statistics for thermal power plants, 16:14740 (I;DK;In Swedish, Finnish, English)
GAS TURBINES
Combustion chamber of a gas turbine, 16:14880 (PA;CA)
Research on aerodynamic control of blade tip clearance flow in air-cooled turbine, 16:14877 (R;JP;In Japanese)
Water-cooling technique of high temperature gas turbine blade.: Thermal efficiency of water-cooled gas turbine, 16:14875 (R;JP;In Japanese)

GAS-INSULATED SUBSTATIONS
Measuring equipment with an auxiliary electrode for a gas-insulated, enclosed high-voltage power station, 16:14661 (PA;CA)
Metal-clad compressed gas-blast circuit-breaker, 16:14663 (PA;CA)
GASEOUS DIFFUSION PLANTS
See also PADUCAH PLANT
PORTSMOUTH GASEOUS DIFFUSION PLANT
Investigation of gas-phase decontamination of internally radioactively contaminated gaseous diffusion process equipment and piping, 16:14217 (R;US)
GASEOUS DIFFUSION PROCESS
Development of uranium enrichment, 16:14220 (IA;CA)
Investigation of gas-phase decontamination of internally radioactively contaminated gaseous diffusion process equipment and piping, 16:14217 (R;US)
GASEOUS EFFLUENTS
See GASEOUS WASTES
GASEOUS WASTES
See also EXHAUST GASES
FLUE GAS
Catalytic combustion of natural gas: Technological aspects, 16:14134 (R;NL;In Dutch)
Chemical and physical processes in Tank 241-SY-101: A preliminary report: Hanford Tank Safety Project, 16:14304 (R;US)
High temperature gas cleaning system study: Substudy 2.3: Alkali metals and other trace elements, 16:14002 (R;NL;In Dutch)
Minutes of the Tank Waste Science Panel meeting, July 20, 1990: Hanford Tank Safety Project, 16:14305 (R;US)

NEGATRONS
See ELECTRONS

NEODYMIUM
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)

NEODYMIUM 143 TARGET
Two-step cascade transitions following neutron capture: A new source of information of photon strength functions, 16:15735 (RA;XA)

NEON 20 REACTIONS
K^+ production in relativistic nuclear collisions, 16:15718 (R;DE)

NEON 20 TARGET
Anormalous emission of glueball candidates in the reaction anti p + Neon at 607 MeV/c incident momentum: CERN project PS-179, 16:15690 (R;NO)

NEON 22 REACTIONS
Search for correlated groups of particles produced in interactions of neon-22 relativistic nuclei with nuclei in photoemulsion at 4.1 A GeV/c momentum, 16:15689 (R;SU;In Russian)

NEOPLASMS
See also CARCINOMAS
Experimental studies on lung carcinogenesis and their relationship to future research on radiation-induced lung cancer in humans, 16:15430 (R;US)
PBF/BNCT Program: Monthly bulletin, January 1991: Volumes 5, No. 1, 16:15350 (R;US)
Power burst facility/boron neutron capture therapy program for cancer treatment: Monthly bulletin, Volume 4, No. 12: December 1990, 16:15349 (R;US)
Radioprotective effect of gaseous hypoxia in radiotherapy of human tumors, 16:15413 (IA;SU;In Russian)

NERVES
On correlations of neuronal spike discharges, 16:15839 (R;XA)

NET TOKAMAK
Treating the neutronics of a (d,t)-fusion reactor operating on the tokamak principle (NET), 16:15946 (R;DE;In German)

NETHERLANDS
Collecting, processing, storage and disposal of wastes containing radioactivity, 16:14299 (R;NL;In Dutch)

NETWORKS (COMPUTER)
See COMPUTER NETWORKS

NEURAL NETWORKS
Applications of neural networks to process control and modeling, 16:15986 (R;US)
Investigation of neural network paradigms for the development of automatic noise diagnostic/reactor surveillance systems, 16:14577 (R;US)

NEUTRETTOS
See MUON NEUTRINOS

NEUTRINO-NUCLEON INTERACTIONS
The α^3_S corrections to the Bjorken sum rule for polarized electro-production and to the Gross-Llewellyn Smith sum rule, 16:15604 (R;NL)

NEUTRON ACTIVATION ANALYSIS
Application of programme system BRAND for analysis of activation experiments, 16:15737 (IA;SU;In Russian)
UENDL/NAA. USSR Evaluated Nuclear Data Library for Neutron Activation Analysis, 16:15666 (R;XA)

NEUTRON BEAMS
An optimized epithermal neutron beam for neutron capture therapy (NCT) at the Brookhaven Medical Research Reactor (BMRR), 16:15347 (R;US)

NEUTRON CAPTURE
See NEUTRON REACTIONS

NEUTRON CAPTURE THERAPY
PBF/BNCT Program: Monthly bulletin, January 1991: Volumes 5, No. 1, 16:15350 (R;US)
Power burst facility/boron neutron capture therapy program for cancer treatment: Monthly bulletin, Volume 4, No. 12: December 1990, 16:15349 (R;US)

NEUTRON DETECTORS
Neutron dosemeters and radiometers check-up installation, 16:15179 (R;SU;In Russian)

NEUTRON DIFFUSION EQUATION
The DIF3D nodal kinetics capability in Hex-Z geometry: Formulation and preliminary tests, 16:14574 (R;US)

NEUTRON DOSIMETRY
Present state of neutron metrology in the high flux reactor, 16:14608 (R;NL)
The International Reactor Dosimetry File (IRDF-90), 16:15667 (R;XA)

NEUTRON ECONOMY
See NEUTRON FLUX

NEUTRON FLUX
Fluence and spectrometry of 14 Mev neutrons. Application to the excitation function of 56-Fe(n,p) 56-Mn reaction, 16:15770 (I;MA;In French)

NEUTRON FLUX DENSITY
See NEUTRON FLUX

NEUTRON MATTER
See NUCLEAR MATTER

NEUTRON MONITORS
Experiences with the reaction $^{93}Nb(n,n')^{93m}Nb$ in neutron fluence monitoring, 16:15162 (R;NL)

NEUTRON REACTIONS
See also FAST FISSION

Capture
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)
Isotopic dependence of radiative capture cross sections of intermediate and heavy mass nuclei at neutron energy of 0.5-2.0 MeV, 16:15670 (IA;SU;In Russian)
Measurement and analysis of neutron transmission and self-indication of the neutron radiative capture cross-section for ^{238}U in the 5-110 keV energy region, 16:15769 (RA;XA)
Two-step cascade transitions following neutron capture: A new source of information of photon strength functions, 16:15735 (RA;XA)

Compound-Nucleus Reactions
Gamma ray emission from multistep compound reactions, 16:15729 (RA;XA)

Coupled Channel Theory
Neutron cross sections and tin isotope strength functions in method of coupled channels, 16:15738 (IA;SU;In Russian)

Cross Sections
Experimental determination of the $^{27}Al(n,\alpha)^{24}Na$ reaction cross section at neutron energy of 14.8 MeV, 16:15687 (IA;SU;In Russian)
GRINTACS. Thermal Neutron Activation Cross-Sections and Resonance-Integrals, 16:15659 (R;XA)
Reaction cross-sections induced by 14.5 MeV and by Cf-252 and U-235 fission spectrum neutrons: An analytical review, 16:15668 (R;XA)

Evaluated Data
Reaction cross-sections induced by 14.5 MeV and by Cf-252 and U-235 fission spectrum neutrons: An analytical review, 16:15668 (R;XA)

Excitation Functions
Fluence and spectrometry of 14 Mev neutrons. Application to the excitation function of 56-Fe(n,p) 56-Mn reaction, 16:15770 (I;MA;In French)

Fission
Analysis of prompt neutron spectrum of plutonium-239 nucleus fission, 16:15710 (IA;SU;In Russian)

Gamma Radiation
Calculation of photon production cross sections and spectra from $^{52}Cr(n,x\gamma)$ reactions at 14.6 MeV, 16:15732 (RA;XA)
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)
Gamma ray emission from multistep compound reactions, 16:15729 (RA;XA)
Gamma-ray production cross section measurements using a white neutron source from 1 to 400 MeV, 16:15669 (RA;XA)
Measurement, calculation and evaluation of photon production cross-sections: Proceedings of the specialists' meeting held in Smolenice, the Czech and Slovak Federal Republic, 5-7 February 1990, 16:15726 (R;XA)
Measurements of γ-ray production from $^{52}Cr(n,x\gamma)$ reactions at 14.6 MeV, 16:15691 (RA;XA)
Present status of gamma-ray strength functions and their impact on statistical model calculations, 16:15733 (RA;XA)

Nuclear Data Collections
BROND. USSR Evaluated Neutron Data Library, 16:15661 (R;XA)
ENDF/B-5 Actinides (Rev. 86), 16:15703 (R;XA)
ENDF/B-5 modifications 1986, 16:16006 (R;XA)
ENDF/B-6 High-Energy Data File: Summary, 16:16017 (R;XA)
ENDF/B-6. The U.S. Evaluated Nuclear Data Library for Neutron Reaction Data: Summary of contents, 16:16012 (R;XA)
ENDFIS86/8. Index to the major evaluated neutron data libraries available from the IAEA Nuclear Data Section, 16:16008 (R;XA)
ENDL-84. The Evaluated Nuclear Data Library of the Lawrence Livermore National Laboratory in the ENDF-5 format: Contents and documentation, 16:15656 (R;XA)
Index to BROND, ENDF/B-6, JEF-1, JENDL-3, 16:16014 (R;XA)
JEF-1. The evaluated nuclear data library of the NEA Data Bank: Summary of contents, 16:15665 (R;XA)
JENDL-2 (Rev. 1). Japanese Evaluated Nuclear Data Library. Version 2 Rev. 1: Contents and documentation, 16:15657 (R;XA)
JENDL-3. The Japanese Evaluated Nuclear Data Library: Summary of contents, 16:16016 (R;XA)
KEDAK-4. Karlsruhe Evaluated Neutron Data Library: Brief summary of contents and format, 16:15658 (R;XA)
RCN-2.CP. Evaluated neutron cross-section library for 13 corrosion products, cover-gas nuclides and other nuclides in the primary cooling circuit of a fast power reactor, 16:15660 (R;XA)
RCN-3. Evaluated Fission-Product Cross-Section Library, 16:15694 (R;XA)
WIMKAL-88. The 1988 version of WIMS-KAERI Library: Summary Report, 16:15662 (R;XA)

Resonance Integrals
GRINTACS. Thermal Neutron Activation Cross-Sections and Resonance-Integrals, 16:15659 (R;XA)

Resonance Scattering
Re-evaluation of the resonance parameters of ^{241}Pu, 16:15708 (RA;XA)

Self-Shielding
Measurement and analysis of neutron transmission and self-indication of the neutron radiative capture cross-section for ^{238}U in the 5-110 keV energy region, 16:15769 (RA;XA)

Strength Functions
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)
Present status of gamma-ray strength functions and their impact on statistical model calculations, 16:15733 (RA;XA)

NEUTRON SOURCES
Advanced Neutron Source (ANS) Project: Progress report, 16:14363 (R;US)
Cold moderators for pulsed neutron sources, 16:14358 (R;US)
DROSG-87: Neutron Source Reactions. Version 1990. Angular dependences of neutron energies, cross sections and neutron yields for 13 monoenergetic neutron source reactions, 16:15678 (R;XA)
International panel on 14 MeV intense neutron source based on accelerators for fusion material study: Proceedings, 16:15949 (R;US)
Pressure dynamics modeling for the design of the Advanced Neutron Source reactor, 16:14359 (R;US)

NEUTRON SPECTRA
Analysis of neutron noise spectra using neural networks, 16:14575 (R;US)
Neutron metrology in LAMPF, USA: Experiments coded 986 and 987, 16:15931 (R;NL)

NEUTRON SPECTROMETERS
IPNS chopper spectrometer improvements, 16:15151 (R;US)

NEUTRON TRANSPORT
A VAX version of the coupled Monte Carlo transport codes HETC and MORSE-CGA, 16:15761 (R;US)
Account for resonance effects in multigroup neutron calculations, 16:15772 (IA;SU;In Russian)
Coupled proton/neutron transport calculations using the S_N and Monte Carlo methods, 16:15781 (R;US)
Isotropization of constants of neutron elastic scattering, 16:15773 (IA;SU;In Russian)
Present status and future prospects of neutronics Monte Carlo, 16:15760 (R;US)
The DIF3D nodal kinetics capability in Hex-Z geometry: Formulation and preliminary tests, 16:14574 (R;US)
Three-dimensional nodal transport using the simplified P-L method, 16:15779 (R;US)

NEUTRON TRANSPORT THEORY
On solution of P_{2N-1} -approximation of neutron transport equation in sphere with central point isotropic source, 16:15774 (IA;SU;In Russian)
Solution of two-dimensional equations of neutron transport in $4P_0$-approximation of spherical harmonics method, 16:15762 (R;SU;In Russian)

NEUTRONS
See also EPITHERMAL NEUTRONS
FAST NEUTRONS
THERMAL NEUTRONS
Computed secondary-particle energy spectra following nonelastic neutron interactions with ^{12}C for E_n between 15 and 60 MeV: Comparisons of results from two calculational methods, 16:15756 (R;US)
Los Alamos Science, Number 19, 1990: Neutron scattering, 16:15780 (R;US)
On the project of measuring the neutron lifetime (τ_n) within an error of $\delta\tau_n \simeq \pm 3s$ in the experiment on cold neutron beam transport in the field-free space, 16:15542 (R;SU)
Selected problems in experimental intermediate energy physics: Progress report, February 1, 1990–January 31, 1991, 16:15534 (R;US)

NEVADA TEST SITE
Assessment of the Nevada Test Site monitoring well system, 16:15293 (R;US)
Interim report of the drilling history and analysis for Nevada Test Site hole UE3e#4, 16:15216 (R;US)
More about breathing on the Mesa, 16:15213 (RA;US)

The Nevada Test Site: Application of in situ monitoring of organics at a jet-a-fuel spill, 16:15270 (R;US)

NEW MEXICO
Status of the hot dry rock geothermal energy development program at Los Alamos, 16:14452 (RA;US)

NEW YORK
District heating and cooling feasibility study, Dunkirk, New York: Phase 1: Final report, 16:14870 (R;US)
District heating feasibility, Industrial Corridor, Jamestown, New York: Final report, 16:14869 (R;US)

NEXT EUROPEAN TORUS
See NET TOKAMAK

NICKEL
Indirect pathways as the primary source of human exposure to emissions from a Minnesota Municipal Waste Combustor, 16:15434 (R;US)
Measurement of particle size, velocity and temperature in the plasma spray coating process, 16:14902 (R;US)
Process and analytical studies of enhanced low severity coprocessing using selective coal pretreatment: Quarterly technical progress report, September–November 1990, 16:13955 (R;US)
Sensitivity and uncertainty analysis of NET/ITER shielding blankets, 16:15938 (R;NL)
Shell potential and its application in sputtering theory, 16:15820 (R;SU;In Russian)
Solid oxide fuel cell materials, 16:14772 (RA;US)

NICKEL 58 TARGET
On decay of doorway states produced in (γ,n) reaction on ^{58}Ni and ^{56}Fe nuclei, 16:15744 (IA;SU;In Russian)

NICKEL 60 TARGET
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)

NICKEL ALLOYS
See also ALLOY-RA-333
NICKEL BASE ALLOYS
Development of a new method for hydrogen recovery from lean gas mixtures (e.g., producer gas) using metal hydride slurries: Final report, 16:14369 (R;LU)
Electrodeposited coatings for diamond turning applications, 16:14911 (R;US)
Modeling second-phase formation during rapid resolidification of stainless steel alloys, 16:14920 (R;US)
Novel concepts in weld metal science: Role of gradients and composite structure: Progress report, January 1, 1990–December 31, 1990, 16:14900 (R;US)

NICKEL BASE ALLOYS
See also INCONEL ALLOYS
NIMONIC
Segregation in welded nickel-base alloys, 16:14915 (R;PK)
Swelling in nickel - carbon and nickel - silicon alloys, 16:14916 (R;PK)

NICKEL COMPLEXES
Molecular modeling in the development of metal radiopharmaceuticals: Progress report, July 15, 1990–July 14, 1991, 16:14976 (R;US)

NICKEL OXIDES
Cathode degradation: Final report, 16:14752 (R;US)

NICKEL-CADMIUM BATTERIES
Status of and prospects for cadmium substitution, 16:14849 (I;DE)

NIGERIA
Present status of research activities in food irradiation technology in Nigeria, 16:15366 (RA;XA)
Prospects for food irradiation in Nigeria, 16:15369 (RA;XA)

NIMONIC
Mechanical long-term properties of nickel-base alloys for steam turbine bolting. Final report, 16:14903 (I;DE)

NIOBIUM 93
Joint evaluation of level excitation functions and γ-spectra in inelastic neutron scattering on ^{93}Nb, 16:15695 (IA;SU;In Russian)

NIOBIUM 93 TARGET
Analysis of experimental data on neutron-induced reactions and development of code PCROSS for the calculation of differential pre-equilibrium emission spectra with modelling of level density function: Final report on research contract 5472/RB, 16:15725 (R;XA)
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)
Gamma ray emission from multistep compound reactions, 16:15729 (RA;XA)
Joint evaluation of level excitation functions and γ-spectra in inelastic neutron scattering on ^{93}Nb, 16:15695 (IA;SU;In Russian)
Light particle emissions in heavy ion reactions: Progress report, June 1, 1990–May 31, 1991, 16:15651 (R;US)

NIOBIUM ALLOYS
Stability of force flow cooled superconductors under various cooling conditions, 16:14908 (R;DE;In German)

NITRATES
An expanding grid photochemical model for visibility applications, 16:15242 (R;US)
Biological treatment of Hanford groundwater: Development of an ex situ treatment process, 16:15324 (R;US)

NITRIC OXIDE
Theory and simulation of fluids of associated chain molecules: Progress report, March 1, 1990–February 28, 1991, 16:14975 (R;US)

NITRILES
Biological treatability of selected organic components of an oil shale processing wastewater, 16:14186 (RA;US)
The use of activated carbon in the treatment of a synthetic oil shale processing wastewater, 16:14185 (RA;US)

NITROGEN DIOXIDE
High resolution laser spectroscopy in cold supersonic molecular beams. Cooling, reduction of Doppler width and applications, 16:15499 (R;XA)

NITROGEN OXIDES
See also NITRIC OXIDE
NITROGEN DIOXIDE

The nuclear power programs in the United States: Status and prospects, 16:14711 (IA;CA)

NUCLEAR POWER PLANTS

Aging
Aging management of safety-related concrete structures in nuclear power plants, 16:14617 (R;US)

Air Cleaning Systems
Proceedings of the 21st DOE/NRC Nuclear Air Cleaning Conference: Sessions 1–8, 16:14641 (R;US)

Carbon 14
Nuclear power plants as ^{14}C generators, 16:14501 (IA;SU;In Russian)

China
Development of nuclear power and related topics in China, 16:14710 (IA;CA)

Compiled Data
Electric Power Monthly, March 1991, 16:14736 (R;US)

Control Rooms
FPFPspace2: A code for following airborne fission products in generic nuclear plant flow paths, 16:14646 (R;US)

District Heating
Radiation-hygienic assessment of heat supply from Beloyarsk NPP, 16:15789 (IA;SU;In Russian)

Engineered Safety Systems
Review of inservice inspection and nondestructive examination practices at DOE Category A test and research reactors, 16:14631 (R;US)
Seismic component fragility data base for IPEEE, 16:14613 (R;US)
Summary of nuclear plant aging research at Oak Ridge National Laboratory, 16:14621 (R;US)

Environmental Impacts
Comparison of different type reactors according to the criterion of tritium radiation, 16:14500 (IA;SU;In Russian)
Realization of sanitary requirements concerning standardization of rare radioactive gas effluents at NPPs, 16:14597 (IA;SU;In Russian)
To the technique of radioactive iodine determination near a NPP, 16:14599 (IA;SU;In Russian)

Fires
The impact of thermal aging on the flammability of electric cables, 16:14579 (R;US)

Information Retrieval
Information retrieval system of nuclear power plant database (PPD) user's guide, 16:16021 (R;JP;In Japanese)

Meetings
Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR, 16:14573 (I;SU;In Russian)

Nuclear Engineering
Technical progress in nuclear power engineering. 1(72) Part 1: Isotopes in USSR, 16:14573 (I;SU;In Russian)

Personnel
Benefit of actions concerning minimization of collective doses to NPP maintenance personnel, 16:15792 (IA;SU;In Russian)
Proceedings of the ninth symposium on the training of nuclear facility personel, 16:14622 (R;US)
Process Control
A proven knowledge-based approach to prioritizing process information, 16:14586 (R;US)
Reactor Accidents
Evaluation of corrective action data for reportable events at commercial nuclear power plants, 16:14620 (R;US)
FPFPspace2: A code for following airborne fission products in generic nuclear plant flow paths, 16:14646 (R;US)
Reactor Components
Licensee contractor and vendor inspection status report: Quarterly report, October–December 1990, 16:14557 (R;US)
Reactor Cooling Systems
Fatigue evaluation of piping systems with limited vibration test data, 16:14650 (R;US)
Reactor Monitoring Systems
Investigation of neural network paradigms for the development of automatic noise diagnostic/reactor surveillance systems, 16:14577 (R;US)
Reactor Noise
Investigation of neural network paradigms for the development of automatic noise diagnostic/reactor surveillance systems, 16:14577 (R;US)
Reactor Operation
Licensee Event Report (LER) compilation for month of February 1991, 16:14565 (R;US)
Licensee Event Report (LER) compilation for month of January 1991: Volume 10, No. 1, 16:14564 (R;US)
Reactor Safety
Summary of nuclear plant aging research at Oak Ridge National Laboratory, 16:14621 (R;US)
Risk Assessment
Dependent failure analysis of NPP data bases, 16:14615 (R;US)
Seismic component fragility data base for IPEEE, 16:14613 (R;US)
Site Selection
Ecological problems of nuclear power industry development, 16:14598 (IA;SU;In Russian)
Specifications
Aseismic design and experience of nuclear reactor facilities in Japan, 16:14596 (IA;CA)
Recent developments in seismic design criteria and practice in Japan, 16:14595 (IA;CA)
Seismic criteria and practice: Recent developments in the United States, 16:14593 (IA;CA)
Statistical Data
Availability statistics for thermal power plants, 16:14740 (I;DK;In Swedish, Finnish, English)
Systems Analysis
Dependent failure analysis of NPP data bases, 16:14615 (R;US)
Transients
Evaluation of corrective action data for reportable events at commercial nuclear power plants, 16:14620 (R;US)
Tritium
Comparison of different type reactors according to the criterion of tritium radiation, 16:14500 (IA;SU;In Russian)
USA
Factors in the revitalization of nuclear energy in the U.S., 16:14715 (IA;CA)
Ventilation
Ventilation and air ejection organizing from unserviced rooms at NPPs with WWER reactors, 16:14520 (IA;SU;In Russian)
Waste Heat Utilization
Thermal waste recovery at electric power plants in the European Economic Community: Volume 1: General synthesis, Volume 2: Case studies: Demonstration project, Final report, 16:14486 (R;LU)
Wwer Type Reactors
Ventilation and air ejection organizing from unserviced rooms at NPPs with WWER reactors, 16:14520 (IA;SU;In Russian)

OIL SHALES
Acid Hydrolysis
Examination of wet- and dry-sieved eastern oil shale and microbial reduction in its sulfur content, 16:14154 (RA;US)
Alkaline Hydrolysis
Examination of wet- and dry-sieved eastern oil shale and microbial reduction in its sulfur content, 16:14154 (RA;US)
Biodegradation
Microbial desulfurization of Eastern oil shale: Bioreactor studies, 16:14161 (RA;US)
Chemical Analysis
Morphology of sulfide minerals in eastern oil shale, 16:14174 (RA;US)
Chemical Composition
Conversion characteristics of 10 selected oil shales, 16:14168 (R;US)
Classification
Development of a coking indicator for oil shales, 16:14175 (RA;US)
Cocombustion
Fluidized bed combustor test report for Proof-of-Concept Oil Shale Facility, Colorado Tract C-b, 16:14195 (R;US)
Coking
Development of a coking indicator for oil shales, 16:14175 (RA;US)
Comminution
Prediction of particle size distribution for eastern oil shales using the self similarity approach, 16:14156 (RA;US)
Pressure cycle comminution of eastern oil shale, 16:14157 (RA;US)
Demineralization
Application of Licado process to eastern oil shale, 16:14158 (RA;US)
Density
Specific gravity-Fischer assay relationships among eastern oil shales, 16:14178 (RA;US)
Desulfurization
Examination of wet- and dry-sieved eastern oil shale and microbial reduction in its sulfur content, 16:14154 (RA;US)
Microbial desulfurization of Eastern oil shale: Bioreactor studies, 16:14161 (RA;US)
Energy Source Development
Beginning of an oil shale industry in Australia, 16:14183 (RA;US)
Flotation
Column flotation of eastern oil shales, 16:14159 (RA;US)
Hydrogenation
Pressurized fluidized-bed hydroretorting of Indiana New Albany shale in batch and continuous reactors, 16:14163 (RA;US)
Leaching
Chemical equilibria model analysis of Hope Creek eastern oil shale lysimeter leachate data, 16:14191 (RA;US)
Market
Niche market assessment for eastern oil shale, 16:14184 (RA;US)
Maturation
Organic geochemistry, petrography, and maturation trends of the Ohio shale in eastern Kentucky, 16:14138 (RA;US)
Microbial Leaching
Examination of wet- and dry-sieved eastern oil shale and microbial reduction in its sulfur content, 16:14154 (RA;US)
Multi-Element Analysis
Application of synchrotron radiation for analysis of oil shale and shale derived products, 16:14181 (RA;US)
Oil Yields
Comparison of hydroretorting, Fischer assay and Rock-Eval analyses of some world oil shales, 16:14176 (RA;US)
Specific gravity-Fischer assay relationships among eastern oil shales, 16:14178 (RA;US)
Particle Size
Prediction of particle size distribution for eastern oil shales using the self similarity approach, 16:14156 (RA;US)
Petrology
Organic geochemistry and organic petrology of Paleozoic oil shales in Canada, 16:14139 (RA;US)
Pyrolysis
Nitrogen chemistry during oil shale pyrolysis, 16:14162 (RA;US)
Oil shale quarterly report, August–December 1990, 16:14167 (R;US)
Research Programs
Oil shale quarterly report, August–December 1990, 16:14167 (R;US)
Retorting
Changes in the clay mineralogy of eastern oil shale induced by retorting, 16:14153 (RA;US)
Eastern oil shale attrition and breakage: Testing and modeling, 16:14155 (RA;US)
Fluidized-bed retorting of eastern oil shale, 16:14164 (RA;US)
Operation of the 5-lb/hr KENTORT II reactor in the solid recirculation mode, 16:14165 (RA;US)
Pressurized fluidized-bed hydroretorting of Eastern oil shales, 16:14144 (R;US)
Pressurized fluidized-bed hydroretorting of Indiana New Albany shale in batch and continuous reactors, 16:14163 (RA;US)
Western oil shales attrition and breakage: Testing and mineral characterization, 16:14152 (RA;US)

OIL SPILL FINGERPRINTING

P

P INVARIANCE
Symmetry breaking as a consequence of stabilization of a bottomless theory, 16:15637 (R;DK)
PACIFIC NORTHWEST REGION
See FEDERAL REGION X
PACIFIC OCEAN
See also BERING SEA
A review of seismicity, siting and design criteria in Canada and Pacific Basin countries, 16:14591 (IA;CA)
Nuclear waste disposal in the Pacific basin: Geology overview, 16:14270 (IA;CA)
PADUCAH PLANT
Evaluation of alternatives for best available technology treatment and retreatment of uranium-contaminated wastewater at

the Paducah Gaseous Diffusion Plant C-400 Facility, 16:14289 (R;US)

PAH
See POLYCYCLIC AROMATIC HYDROCARBONS

PAIR PRODUCTION
Baryon pair production in e^+e^- annihilation at $\sqrt{s}$ = 2.4 GeV, 16:15548 (R;FR)
Five jet production in e^+e^- annihilation above the W^+W^- threshold, 16:15607 (R;GB)

PAKISTAN
Clear sky solar insolation data for Islamabad, 16:15233 (R;XA)

PALLADIUM
Solid-state theory, 16:14417 (RA;US)
Study of the reaction dynamics of heavy ion reactions via δ electron spectroscopy, 16:15486 (R;DE;In German)

PALLADIUM 105 TARGET
Calculations of capture cross sections and gamma-ray spectra as a tool for testing strength function models, 16:15734 (RA;XA)

PALLADIUM 106 TARGET
Study of the reaction dynamics of heavy ion reactions via δ electron spectroscopy, 16:15486 (R;DE;In German)

PAPAYAS
Technology and economic interest of food irradiation, illustrated by a range of facilities, 16:15367 (RA;XA;In French)

PAPER INDUSTRY
A comprehensive program to develop correlations for the physical properties of kraft black liquors: Interim report No. 2, 16:14385 (R;US)
Advanced sensor development program for the pulp and paper industry: Final report, 16:14840 (R;US)
Power savings potential of a bleach plant with new technology, 16:14857 (R;FI;In Finnish)

PARABANIC ACID
See ORGANIC OXYGEN COMPOUNDS

PARABOLIC DISH COLLECTORS
General theme report: Working session 2, Solar thermal systems, 16:14427 (R;US)

PARABOLIC POINT COLLECTORS
See PARABOLIC DISH COLLECTORS

PARABOLIC TROUGH COLLECTORS
General theme report: Working session 2, Solar thermal systems, 16:14427 (R;US)

PARACHUTES
A vortex panel method for calculating aircraft downwash on parachute trajectories, 16:15208 (R;US)
An introduction to testing parachutes in wind tunnels, 16:15210 (R;US)

PARAFFINS
See ALKANES

PARAMAGNETIC RESONANCE (NUCLEAR)
See NUCLEAR MAGNETIC RESONANCE

PARAMAGNETISM
A study on the anisotropic interaction between two substitutional magnetic impurities in a realistic metallic host, 16:15808 (R;XA)

PARASITIC DISEASES
Foodborne disease in Africa and irradiation as a potential control technique, 16:15373 (RA;XA)

PARITY NONCONSERVATION
See P INVARIANCE

PARKS (INDUSTRIAL)

PARTIAL DIFFERENTIAL EQUATIONS
See also MAXWELL EQUATIONS
Study of some properties of partial differential equations by Lie algebra method, 16:15831 (R;XA)

PARTICLE BEAMS
Constant of Motion and dynamic equations for one-dimensional autonomous system and radiation damping, 16:15099 (R;US)
High-frequency longitudinal bunched beam instability, 16:15090 (R;SU;In Russian)

PARTICLE BOOSTERS
A controlled master frequency oscillator for the SSC low energy booster, 16:15137 (R;US)
Design and A.C. loss considerations for the 60 mm dipole magnet in the high energy booster, 16:15139 (R;US)
System of synchronization with the magnetic field of a booster synchrotron, 16:15116 (R;SU;In Russian)

PARTICLE DECAY
See also HADRONIC PARTICLE DECAY
Experimental study of heavy flavor physics and SSC research and development at the University of Mississippi: Progress report, July 1, 1989–March 1, 1990, 16:15536 (R;US)

PARTICLE PRODUCTION
See also PHOTOPRODUCTION
Experimental study of heavy flavor physics and SSC research and development at the University of Mississippi: Progress report, July 1, 1989–March 1, 1990, 16:15536 (R;US)
QCD radiative corrections to charged current heavy quark production, 16:15601 (R;NL)
The α^3_S corrections to the Bjorken sum rule for polarized electro-production and to the Gross-Llewellyn Smith sum rule, 16:15604 (R;NL)

PARTICLE SIZE
Measurement of particle size, velocity and temperature in the plasma spray coating process, 16:14902 (R;US)

PARTICULATES
A numerical model of particulate transport, 16:15518 (R;US)
Characterization of particulates in oil sands processing streams, 16:14166 (RA;US)
Comprehensive Report to Congress Clean Coal Technology Program: Healy Clean Coal Project: A project proposed by: Alaska Industrial Development and Export Authority, 16:14490 (R;US)
Environmental monitoring for the DOE coolside and LIMB demonstration extension projects: Final report for the period of October, November, December 1989 and January 1990, 16:14493 (R;US)
Gas stream cleanup: Technology status report, 16:13995 (R;US)
Health hazard evaluation of the postcuring phase of graphite composite operations at the Lawrence Livermore National Laboratory, Livermore, California, 16:15440 (R;US)
Inhalation Toxicology Research Institute annual report, October 1, 1989–September 30, 1990, 16:15428 (R;US)

PASSIVE SOLAR HEATING SYSTEMS
Demonstration of passive solar energy use with multiple fabric blinds in a school building and an office block: Demonstration project: Final report, 16:14431 (R;LU;In German, English)
Thermal comfort under variable conditions: Investigations into the expansion of conditions of comfort to band of comfort, 16:14429 (R;CH;In German)

PATHOGENS
Augmented fish health monitoring for Washington Department of Wildlife: Annual report 1988, 16:15291 (R;US)

PATTERN RECOGNITION
Successful neural network projects at the Idaho National Engineering Laboratory, 16:15974 (R;US)

PCB
See CHLORINATED AROMATIC HYDROCARBONS

PEAT
Basic studies concerning dewatering of peat, 16:13945 (R;SE;In Swedish, English)
New alternatives for electricity production: Part 2. Comparision of gasification combined-cycle techniques for peat and wood, 16:13982 (R;FI;In Finnish)
Peat characterization: Progress report, stage 3, 1988-1990, 16:13934 (R;SE;In Swedish)
Peat compositions and their manufacture, 16:13946 (PA;CA)
Storage of crumb peat, 16:14024 (R;SE;In Swedish)
The peats of Costa Rica: Volume 2, Resource assessment, 16:14012 (R;US)

PEATLANDS
See WETLANDS

PECTINS
Characterization of rhamnogalacturonan I from cotton suspension culture cell walls: [Progress report], 16:15338 (R;US)

PELLET INJECTION
Impurity pellet injection experiments at TFTR: Progress report, 16:15927 (R;US)

PELLETS (FUEL)
See FUEL PELLETS

PEOPLE
See HUMAN POPULATIONS

PERIPHERAL COLLISIONS
Heavy-ion peripheral collisions in the Fermi energy domain: fragmentation processes or dissipative collisions, 16:15746 (R;FR)

PERMANENT MAGNETS
Magnetic fields around permanent magnets, 16:15644 (R;NO)
Optimization of film synthesized rare earth transition metal permanent magnet systems: Progress report, August 1, 1990–March 1991, 16:14899 (R;US)

PEROVSKITES
Evaluation of novel solid electrolyte materials, 16:14769 (RA;US)

PERSONAL COMPUTERS
Scientific visualization software for your PC: Free and available now!, 16:16001 (R;US)
Use of personal computers in performing a linear modal analysis of a large finite-element model, 16:16002 (R;US)

PDC1: One dimensional radial code for a cylindrical plasma device with an external RLC circuit, 16:15871 (R;US)
PLASMA WAVES
Electron collision frequency in microwave exposed plasma, 16:15915 (R;NO)
Plasma oscillations and their influence on the ion beam dynamics in the injector of a thermonuclear reactor, 16:15900 (IA;SU;In Russian)
PLASTIC FOAMS
Thermal resistance of prototypical cellular plastic roof insulations, 16:14787 (R;US)
PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS
PLASTIC SCINTILLATION DETECTORS
Construction and calibration studies of the SAPHIR scintillation counters, 16:15154 (R;DE;In German)
PLASTICS
See also MYLAR
Drawing up scientific principles for energy recovery by means of waste disposal in the plastics industry, using the combustion process by KEVAG AG, 16:14847 (R;CH;In German)
PLATING SOLUTIONS
See PROCESS SOLUTIONS
PLATINUM 196
Triaxiality and γ-softness in the A $\simeq$ 190 mass region, 16:15698 (R;DE)
PLATINUM ALLOYS
Impurity tolerant electrocatalysts, 16:14777 (RA;US)
PLATINUM COMPLEXES
Oligomer and mixed-metal compounds: Potential multielectron transfer catalysts: Progress report, January 1, 1990–January 1, 1991, 16:14989 (R;US)
PLESIOTHERAPY
See RADIOTHERAPY
PLT DEVICES
Effect of surface modes on coupling to fast waves in the LHRF, 16:15916 (R;US)
PLUGS
See CLOSURES

PLUMES
An expanding grid photochemical model for visibility applications, 16:15242 (R;US)
PLUTONIUM
A novel device for processing radioactive combustibles, 16:14293 (R;US)
Measurement control for calorimetric assay, 16:14349 (R;US)
Qualitative risk assessment as a remediation management tool, 16:15439 (R;US)
PLUTONIUM 238
Mortality among workers at the Mound Facility: A preliminary report, 16:15427 (R;US)
PLUTONIUM 239 TARGET
Analysis of prompt neutron spectrum of plutonium-239 nucleus fission, 16:15710 (IA;SU;In Russian)
Chinese Evaluated Fission-Product Yield Library 1987 (preliminary), 16:15705 (R;XA)
ENDF/B-6 Standards Library: Summary of contents and documentation, 16:15683 (R;XA)
PLUTONIUM 241 TARGET
Chinese Evaluated Fission-Product Yield Library 1987 (preliminary), 16:15705 (R;XA)
ENDF/B-6 Standards Library: Summary of contents and documentation, 16:15683 (R;XA)
Re-evaluation of the resonance parameters of ^{241}Pu, 16:15708 (RA;XA)
PLUTONIUM COMPOUNDS
See also PLUTONIUM OXIDES
Electrolytic decontamination of transuranic wastes by alternating electrolysis, 16:14287 (R;JP;In Japanese)
PLUTONIUM ISOTOPES
See also PLUTONIUM 238
In-beam studies of high-spin states of actinide nuclei, 16:15712 (R;US)
PLUTONIUM OXIDES
Rupture of plutonium oxide storage container, March 13, 1979, 16:14328 (R;US)
PLUTONIUM RECYCLE TEST REACTOR
See PRTR REACTOR
PNA
See POLYCYCLIC AROMATIC HYDROCARBONS
PNEUMATIC TRANSPORT
Development and utilization of new diagnostics for dense-phase pneumatic transport: Quarterly technical progress report, October 1, 1990–December 31, 1990, 16:14022 (R;US)
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POLARIZED BEAMS
Recent results and future prospects for the polarized beam at Fermilab, 16:15523 (R;US)
Siberian Snake solenoid for the AGS, 16:15102 (R;US)
POLLUTANTS
Environmental Measurements Laboratory (EML) procedures manual: 27th edition, Volume 1, 16:15232 (R;US)
POLLUTION CONTROL EQUIPMENT
See also BAGHOUSES
CATALYTIC CONVERTERS
ELECTROSTATIC PRECIPITATORS
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Engineering-scale dust control experiments, 16:15230 (R;US)
POLLUTION REGULATIONS
See also CONTAMINATION REGULATIONS
Demonstration test of low-ash CWM combustion, 16:14848 (IA;JP;In Japanese)
Reporting releases of hazardous substances under CERCLA and EPCRA: CERCLA Information Brief, 16:14689 (R;US)
POLONIUM 210
Mortality among workers at the Mound Facility: A preliminary report, 16:15427 (R;US)
POLY(ISOBUTYLENE OXIDE)
See EPOXIDES
POLY(VINYLIDENE FLUORIDE)
See FLUORINATED ALIPHATIC HYDROCARBONS
POLYACRYLONITRILE
See NITRILES
POLYCYCLIC AROMATIC HYDROCARBONS
Configurational diffusion of coal macromolecules: Quarterly progress report, December 15, 1990–March 15, 1991, 16:13974 (R;US)
Screening of groundwater for aromatics by synchronous fluorescence, 16:15287 (R;US)
POLYETHERS
See POLYETHYLENE GLYCOLS
POLYETHYLENE GLYCOLS
Synergistic extraction of trivalent actinides and lanthanides using HTTA and an aza-crown ether, 16:14963 (R;US)
POLYETHYLENE OXIDES
See POLYETHYLENE GLYCOLS
POLYNOMIALS
Use of a genetic algorithm to analyze robust stability problems, 16:15985 (R;US)
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYSULFIDES
See SULFIDES
POPLARS
Investigations on short rotation forestry for energy: Final report, 16:14371 (R;LU)
PORE STRUCTURE
See MICROSTRUCTURE
POROUS MATERIALS
Energy Conversion and Storage Program: Annual report, 1989, 16:14703 (R;US)
Immiscible multi-phase flow in porous media, 16:15297 (R;DK)
Rapid moisture measurements in thin sand slabs, 16:15325 (R;US)
TRACR3D: A model of flow and transport in porous media: Model description and user's manual, 16:15272 (R;US)
PORTSMOUTH GASEOUS DIFFUSION PLANT
Autoclave criticality analysis, 16:14343 (R;US)
POSITION INDICATORS
See DISPLACEMENT GAGES
POSITIVE IONS
See CATIONS
POSITRON BEAMS
[Linac-based "Slow Positron Factory" facility]: Foreign trip report, February 24, 1991–March 10, 1991, 16:15504 (R;US)
POSITRON CHANNELING
Anisotropy of relativistic lepton coherent scattering at axial channeling, 16:15805 (R;SU;In Russian)
POTABLE WATER
See DRINKING WATER
POTASSIUM 40
Action of ^{40}K in low doses on biological active animal skin locuses, 16:15399 (IA;SU;In Russian)
POTASSIUM CARBONATES
A novel approach to highly dispersing catalytic materials in coal for gasification: Third quarterly report, April 1, 1990–June 30, 1990, 16:13962 (R;US)
POTASSIUM URANATES
Uranium recovery and recycling within Eldorado, 16:14209 (IA;CA)
POTTING MATERIALS
Shock characterization of epoxy: 42 volume percent glass microballoons, 16:14953 (R;US)
POWDERS
Ceramic natural gas burners: Report January-December 1989, 16:14845 (R;NL;In Dutch)
Forming high-Tc superconductors, 16:14945 (R;NL;In Dutch)
POWER DEMAND
Load predictions in low voltage networks, 16:14654 (R;SE;In Swedish)
POWER DISTRIBUTION SYSTEMS
Constant voltage control in a distribution network: Instructions for adjusting voltage regulators, 16:14659 (R;DK;In Danish)
Constant voltage control in a distribution network: Main report, 16:14657 (R;DK;In Danish)

Operations, maintenance, and replacement 10-year plan and accompanying technical reports, 1990–1999, 16:14482 (R;US)
POWER GENERATION
See also COGENERATION
Heavy metal emissions in Finland, 16:15267 (R;FI;In Finnish)
Impacts of climate change on energy production and consumption in Finland, 16:15238 (R;FI;In Finnish)
Wakamatsu 50MW fluidized-bed combustion boiler demonstration test update, 16:14038 (IA;JP;In Japanese)
POWER METERS
Electrical fault detecting device, 16:14664 (PA;CA)
POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
Semiconductor electric power conversion system, 16:14662 (PA;CA)
POWER TRANSMISSION LINES
Heat-generative electric wire, 16:14666 (PA;CA)
Insulator, 16:14667 (PA;CA)
PRASEODYMIUM
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)
PRASEODYMIUM PHOSPHATES
Infrared and Raman investigation of rare-earth phosphate glasses for potential use as radioactive waste forms: Final Report, 16:14244 (R;US)
PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS
PRECOMPOUND-NUCLEUS EMISSION
ALICE-87 (Livermore). Precompound Nuclear Model Code. Version for Personal Computer IBM/AT, 16:15720 (R;XA)
EMPIRE. Pre-equilibrium/Compound Nuclear Model Code for Personal Computer, 16:15722 (R;XA)
PREEQUILIBRIUM NUCLEAR PROCESSES

PRESSURE TUBES
Investigation of the combined failure of a pressure tube and defected fuel rod in PRTR, 16:14527 (R;US)
PRESSURE VESSELS
A comparison between classical and substructuring finite-element stress analysis of a complex vacuum vessel shell, 16:14542 (R;US)
A probabilistic approach to the evaluation of the PTS issue, 16:14618 (R;US)
APS Storage Ring vacuum chamber fabrication, 16:15142 (R;US)
Evaluation of catastrophic failure risk in pressure vessels: Results of pressure vessel test with a large vessel (HC2-test), 16:14581 (R;FI)
Mechanical Safety Subcommittee guideline for design of thin windows for vacuum vessels, 16:15112 (R;US)
Method and system for monitoring wall thickness of pipelines, pressure vessels etc. and a sensor to be used for the same purpose, 16:15018 (PA;CA)
The effects of water environments on crack growth behavior of LWR pressure vessel steels, 16:14640 (R;JP;In Japanese)
PRESSURIZED WATER COOLED MODERATED REACTOR
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRICES
The price of energy as a factor influencing the investment decisions of industrial companies, 16:14685 (R;FI;In Finnish)
PRIMARY COOLANT CIRCUITS
Analysis of crack initiation and growth in the high level vibration test at Tadotsu, 16:14616 (R;US)
Reliability evaluation of the Savannah River reactor leak detection system, 16:14590 (R;US)
Use of the AFA and AFAS-I filter packets for studying gaseous effluents of the RBMK-1000 reactor under acid washing, 16:14525 (IA;SU;In Russian)
PRINCETON LARGE TORUS
See PLT DEVICES
PRINTED CIRCUITS
Non-CFC cleaning of printed wiring boards, 16:15255 (R;US)
Unipunch capability study, 16:15053 (R;US)
PROCESS CONTROL
A proven knowledge-based approach to prioritizing process information, 16:14586 (R;US)
Applications of neural networks to process control and modeling, 16:15986 (R;US)
Development of a general-purpose, integrated knowledge capture and delivery system, 16:15970 (R;US)
Successful neural network projects at the Idaho National Engineering Laboratory, 16:15974 (R;US)
PROCESS HEAT REACTORS
Determining the potential volume of industrial process steam to be generated in nuclear facilities, 16:14526 (R;DE;In German)
PROCESS SOLUTIONS
A plan for implementation of innovative hazardous waste minimization techniques at an eastern US Naval Plating Shop, 16:14838 (R;US)
Characterization of particulates in oil sands processing streams, 16:14166 (RA;US)
PROCESSING (DATA)

SLOWPOKE TYPE REACTORS
WWR-M-LENINGRAD REACTOR
Panel: Experts from non-supplier countries and regions, 16:14592 (IA;CA)
The decommissioning of a small nuclear reactor: Model study - February 1990, 16:14603 (R;NO;In Norwegian)
RESERVOIR ROCK
Parameterizing and block-averaging electrical characteristics of a reservoir: An essential part of electrical/electromagnetic evaluation of production process, 16:14056 (R;US)
RESID
See PETROLEUM RESIDUES
RESIDENCES
See HOUSES
RESIDENTIAL BUILDINGS
See also HOUSES
Data logger analysis case studies: Residential Construction Demonstration Project Cycle I, 16:14790 (R;US)
Development of a high-efficiency, gas-fired, absorption heat pump for residental and small-commercial applications: Phase 1, Final report: Analysis of advanced cycles and selection of the preferred cycle, 16:14820 (R;US)
Improvement in the thermal characteristics of a room with direct solar energy extraction using latent heat storage: Final report NEFF-project No. 429, 16:14806 (R;CH;In German)
Significant ELCAP analysis results: Summary report: End-Use Load and Consumer Assessment Program, 16:14822 (R;US)
RESIDENTIAL SECTOR
Measuring the effects of conservation program special services: Client education, fuel assistance, and other indirect outcomes, 16:14783 (R;US)
RESIDUAL OILS
See PETROLEUM RESIDUES
RESIDUES (RADIOACTIVE)
See RADIOACTIVE WASTES
RESINS
Anion-exchange resin-based desulfurization process: Quarterly technical progress report, August 9, 1990–December 31, 1990, 16:14001 (R;US)
Degradation of resins in EPICOR-II prefilters from Three Mile Island, 16:14263 (R;US)
Results of field testing of waste forms using lysimeters, 16:14262 (R;US)
Selective flotation of fossil resin from western coal: Quarterly report, August 1, 1990–November 30, 1990, 16:13942 (R;US)
RESISTORS
The Vivitron resistors, 16:15108 (R;FR;In French)
RESOURCE DEVELOPMENT
The Offshore Environmental Studies Program (1973-1989): A summary of Minerals Management Service research conducted on the US Outer Continental Shelf, 16:14094 (R;US)
RESOURCE RECOVERY ACTS
The small-scale treatability study sample exemption: RCRA Information Brief, 16:14688 (R;US)

RESOURCE RECOVERY FACILITIES
Engineering study to determine most practical application for district chilled water in St. Louis, Missouri: Final report, 16:14866 (R;US)
RESPONSE MODIFYING FACTORS
Modification of acute radiation injuries by cytozares, 16:15402 (IA;SU;In Russian)
RETORTED SHALES
See SPENT SHALES
RETORTING
Pressurized fluidized-bed hydroretorting of Eastern oil shales, 16:14144 (R;US)
RETORTS
Application of LO-CAT chelated iron scrubbers to retort gases, 16:14189 (RA;US)
Operation of the 5-lb/hr KENTORT II reactor in the solid recirculation mode, 16:14165 (RA;US)
Removal of hydrogen sulfide by combusted Rundle oil shale: Sulfidation of iron oxides, 16:14190 (RA;US)
REVERSE-FIELD PINCH
The Braginskii fluid stability of reversed field pinches, 16:15866 (R;GB)
RF SYSTEMS
A new approach in simulating RF linacs using a general, real-time signal processor, 16:15130 (R;US)
RHENIUM COMPLEXES
Oligomer and mixed-metal compounds: Potential multielectron transfer catalysts: Progress report, January 1, 1990–January 1, 1991, 16:14989 (R;US)
RHO-1500 RESONANCES
See MESONS
RHO-1700 RESONANCES
See MESONS
RHODANATES
See THIOCYANATES
RHODANIDES
See THIOCYANATES
RHODIUM
Probe molecule studies: Active species in alcohol synthesis: First quarterly report, September 1990–December 1990, 16:14400 (R;US)
RIBONUCLEIC ACID
See RNA
RICHLAND FFTF REACTOR
See FFTF REACTOR
RICHLAND NPR REACTOR
See N-REACTOR
RIEMANN CURVATURE TENSOR
See RIEMANN SPACE
RIEMANN GEOMETRY
See RIEMANN SPACE
RIEMANN MANIFOLDS
See RIEMANN SPACE
RIEMANN METRIC
See RIEMANN SPACE
RIEMANN SPACE
The Wess-Zumino-Witten models on N-punctured Riemann sphere, 16:15840 (R;XA)
Variational problems with obstacles and harmonic maps, 16:15841 (R;XA)
RIEMANN SPHERE
See RIEMANN SPACE
RIEMANN WAVES
See SHOCK WAVES
RINGS (STORAGE)
See STORAGE RINGS
RISA
See ALBUMINS
RISER CRACKING
See COAL LIQUEFACTION
RISOE NATIONAL LABORATORY
Department of Energy Technology. Annual progress report 1 January - 31 December 1989, 16:15963 (R;DK)
Metallurgy Department publications 1989, 16:14917 (R;DK)
Plan for the activities of Risoe National Laboratory of the three-year period 1991 to 1993, 16:14706 (R;DK;In Danish)
The Risoe pulverized coal fired tunnel furnace, 16:14042 (R;DK;In Danish)
RIVERS
See also COLUMBIA RIVER
SAVANNAH RIVER
Analysis of the sediments of a freshwater tidal flat of the Elbe river estuary, 16:15299 (R;DE;In German)
Tritium in atmospheric precipitations, rivers and seas in the USSR, 16:15302 (IA;SU;In Russian)
RIVETS
See FASTENERS
RNA
[Structure and stability of nucleic acids]: Progress report, July 1, 1985–June 30, 1988, 16:15340 (R;US)
ROBOTS
Intelligent systems for remote decommissioning in hazardous environments, 16:14311 (R;US)
On the control of two manipulators holding a rigid object in the presence of uncertainty, 16:15000 (R;US)
Performance of visual and ultrasound sensing by an autonomous robot, 16:15010 (R;US)
Raybot: A practical implementation of a hierarchical control system for telerobotic land vehicles, 16:15994 (R;US)
Robot self-location in unknown environments, 16:15009 (R;US)
Robotics for recombinant DNA and human genetics research, 16:15346 (R;US)
ROCK MECHANICS
A constitutive model for jointed rock mass with two intersecting sets of joints, 16:14307 (R;US)
ROCKS
Migration of gases through argillaceous rocks: A literature review, 16:14295 (R;GB)
ROCKY FLATS PLANT
Surface Water Interim Measures/Interim Remedial Action Plan/ Environmental and Decision Document, South Walnut Creek Basin, Operable Unit No.2: Volume 1, Text: Final, 16:15292 (R;US)
RODS
Thermal striping of a rod: Thermoelastic solution for sinusoidal fluid temperature, 16:14537 (R;US)
RODS (FUEL)
See FUEL RODS
ROOM AND PILLAR MINING
Environmental and health surveillance monitoring results at Parachute Creek Shale Oil Project, 1988 and 1989, 16:14192 (RA;US)
ROOTS
The drying of manioc using solar energy, 16:14361 (R;XA;In French)
ROTARY DRILLING
Development of instrumentation for guided long-hole drilling: Final report, 16:14015 (R;LU)
ROTARY DRILLS
Extensometric sensor measuring the stress on a boring element and assembly for said sensor, 16:15046 (PA;CA;In French)
ROVNO-1 REACTOR
Characteristics of gaseous-aerosol effluents of NPP with WWER-440 reactors, 16:14601 (IA;SU;In Russian)
ROVNO-2 REACTOR
Characteristics of gaseous-aerosol effluents of NPP with WWER-440 reactors, 16:14601 (IA;SU;In Russian)
RUBBER (NATURAL)
See NATURAL RUBBER
RUBY LASERS
43 watt CW Ti:Sapphire laser, 16:15066 (R;US)
RURAL AREAS
Programme of rural electrification by photovoltaic generators: Demonstration project: Final report, 16:14422 (R;LU;In English, French)
RUTHENIUM
Behavior of ruthenium in the case of shutdown of the cooling system of HLLW storage tanks, 16:14221 (R;FR)

RUTHENIUM COMPLEXES
Oligomer and mixed-metal compounds: Potential multielectron transfer catalysts: Progress report, January 1, 1990–January 1, 1991, 16:14989 (R;US)

S

S-1000 RESONANCES
See MESONS
SACCHARIDES
See also OLIGOSACCHARIDES
Characterization of rhamnogalacturonan I from cotton suspension culture cell walls: [Progress report], 16:15338 (R;US)
SACCHAROMYCES
Radioprotective action of thiazolines (evaluation with the position of hypothesis of endogenous background of radioresistance), 16:15416 (IA;SU;In Russian)
SAFE LOW POWER CRITICAL EXPERIMENT
See SLOWPOKE TYPE REACTORS
SAFEGUARDS
See also IAEA SAFEGUARDS
Bibliography for safeguards 1985–1989, 16:14348 (R;US)
SAFETY (NUCLEAR)
See RADIATION PROTECTION
SAFETY (REACTOR)
See REACTOR SAFETY
SAFETY ENGINEERING
Changes of coal mine safety, 16:14049 (IA;JP;In Japanese)
Present state of R and D projects for coal mine safety, 16:14050 (IA;JP;In Japanese)
SAFETY STANDARDS
See also DOSE LIMITS
Nuclear safety standards: Quality guarantee main code on the safety of nuclear power plants : Adaptation of IAEA Code safety series 50-C-QA (rev. 1), 16:15802 (R;NL;In Dutch)
SALINE ZONE
See OIL SHALES
SALMON
Anadromous fish habitat enhancement for the Middle Fork and Upper Salmon River: Annual report - 1988, 16:15290 (R;US)
Assessment of smolt condition for travel time analysis: Annual report, 1989, 16:15335 (R;US)
Camas Creek (Meyers Cove) anadromous species habitat improvement: Annual report, 1989, 16:14404 (R;US)
Salmon River habitat enhancement: Annual report - 1989, 16:15289 (R;US)
South Fork Clearwater River habitat enhancement: Crooked and Red Rivers: Annual report, 1989, 16:14403 (R;US)
SALT CAVERNS
Thermal simulation of drift emplacement for direct disposal of spent fuel: Evaluation of the backfilling technique, 16:14276 (IA;CA)
SAMARIUM
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)
Laser spectroscopy of atomic samarium, 16:15496 (R;SU)
SAMARIUM COMPOUNDS
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)
SAMPLERS
See also AIR SAMPLERS
Studying the properties of radioactive products in gaseous effluents using the packetc of analytical filters and the PURGA-K cryogenic sampler, 16:15005 (IA;SU;In Russian)
SAND
Rapid moisture measurements in thin sand slabs, 16:15325 (R;US)
SANDIA LABORATORIES
Environmentally conscious manufacturing at Sandia National Laboratories, 16:15256 (R;US)
PTTSA Action Plan Report, 16:14345 (R;US)
Pre-Tiger Team Self-Assessment report, 16:14344 (R;US)
SANITARY LANDFILLS
Hanford Site Solid Waste Landfill permit application, 16:14250 (R;US)
SAPPHIRE
In-situ scanned probe studies on site specificity of laser surface damage of graphite, sapphire, and multilayer coatings, 16:14935 (R;US)
SASKATCHEWAN
An overview of Saskatchewan's program for the environmental regulation of uranium mining, 16:14203 (IA;CA)
SAVANNAH RIVER
Chronic toxicity evaluation of the Savannah River Site DETF discharges and three locations on Tims Branch: Final report, 16:15308 (R;US)
Radioactive effluents in Savannah River: Summary report for 1987, 16:15296 (R;US)
SAVANNAH RIVER PLANT
Chronic toxicity evaluation of the Savannah River Site DETF discharges and three locations on Tims Branch: Final report, 16:15308 (R;US)
Demonstration of the Polymeric Barrier System (PBS) for site specific interim control applications at the Feed Materials Production Center, Fernald, Ohio and the Savannah River Plant, Aiken, South Carolina, 16:14338 (R;US)
Savannah River Site environmental report for 1989: Volume 1, Text, 16:14326 (R;US)
Savannah River Site environmental report for 1989: Volume 2, Figures and data tables, 16:14327 (R;US)
Savannah River Site new NIM design, 16:14347 (R;US)
The Groundwater Monitoring Program at the Savannah River Site, 16:15295 (R;US)
SAVANNAH RIVER PLANT K REACTOR
See K REACTOR
SAVANNAH RIVER PLANT L REACTOR
See L REACTOR
SCALAR FIELDS
Has the classical vacuum a conformal structure?, 16:15620 (R;XA)
SCANNERS (OPTICAL)
See OPTICAL SCANNERS
SCANNING (RADIOISOTOPE)
See RADIOISOTOPE SCANNING
SCHOOL BUILDINGS
Demonstration of passive solar energy use with multiple fabric blinds in a school building and an office block: Demonstration project: Final report, 16:14431 (R;LU;In German, English)
Efficient energy utilization in schools: Conference as part of the EFFENS research project of the BEW for planners, architects and representatives of authorities, 16:14800 (R;CH;In German)
SCHROEDINGER EQUATION
Calculation aspects of the solution of one-dimensional nuclear Schroedinger equation with two-well numerical potential, 16:15488 (R;SU;In Russian)
Quantum gravitational corrections to the functional Schroedinger equation, 16:15843 (R;XA)
Stability diagram of the phase-locked solitons in the parametrically driven, damped non-linear Schroedinger equation, 16:15812 (R;XA)
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
See also GAS SCINTILLATION DETECTORS
Simulation of light propagation in scintillation counters, 16:15155 (R;DE;In German)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCRAM
Development of accident diagnosis and prediction system for research reactor: A pilot system of early fault detection expert system to reduce scram frequency, 16:14588 (R;JP;In Japanese)
SCRAP
See also SCRAP METALS

Uranium recovery and recycling within Eldorado, 16:14209 (IA;CA)

SCRAP METALS
Electrolytic decontamination of transuranic wastes by alternating electrolysis, 16:14287 (R;JP;In Japanese)

SCRAPERS
Scraper for liquid distribution pipes, especially for petroleum products, 16:15039 (PA;CA)

SCREWS
See FASTENERS

SEA DISPOSAL
See MARINE DISPOSAL

SEALING MATERIALS
Evaluation of radiation-induced degradation of silicon 'O' ring, 16:14950 (R;JP;In Japanese)

SEAS
See also BALTIC SEA
INDIAN OCEAN
PACIFIC OCEAN
Transfrontier transfer radioactive wastes from West-European radiochemical plants in seas of the USSR, 16:15303 (IA;SU;In Russian)
Tritium in atmospheric precipitations, rivers and seas in the USSR, 16:15302 (IA;SU;In Russian)

SEBACEOUS GLANDS
See SKIN

SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECONDARY RECOVERY
See ENHANCED RECOVERY

SEDIMENTS
Analysis of the sediments of a freshwater tidal flat of the Elbe river estuary, 16:15299 (R;DE;In German)
Radioactive effluents in Savannah River: Summary report for 1987, 16:15296 (R;US)
Salmon River habitat enhancement: Annual report - 1989, 16:15289 (R;US)

SEISMIC DETECTORS
High resolution seismic data acquisition system, 16:15199 (R;US)

SEISMOLOGY
IRIS-SEIS users manual and installation guide: Version 1.3.0, 16:15445 (R;US)
IRIS-SEIS users manual and installation guide: Version 1.3.0: Revision 1, 16:15446 (R;US)

SEMICIRCULAR SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR LASERS
SEMICONDUCTOR SWITCHES
TRANSISTORS
Recent advances with quiescent power supply current (I_{DDQ}) testing at Sandia using the HP82000, 16:15061 (R;US)
Solutions to current induced avalanche burnout, 16:15054 (R;US)

SEMICONDUCTOR LASERS
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
Strained quantum well leaky-mode diode laser arrays, 16:15055 (R;US)

SEMICONDUCTOR SWITCHES
High power light activated semiconductor switches with subnanosecond rise time, 16:15058 (R;US)

SENEGAL
Food irradiation and the detection of irradiated products: Scenarios and prospects in Senegal, 16:15372 (RA;XA;In French)

SEPARATION EQUIPMENT
Development of an electrochemical hydrogen separation device, 16:14366 (RA;US)
Physical/chemical treatment of mixed waste soils, 16:14242 (R;US)

SEPARATION PROCESSES
See also CENTRIFUGATION
REPROCESSING
Ceramic membranes for high temperature gas separation, 16:14944 (R;NL;In Dutch)
Interphase transport and multistage separations: Progress report, September 1, 1987–February 28, 1991, 16:15025 (R;US)

SERVICE SECTOR
Consumption of electric energy in services, 16:14744 (R;FI;In Finnish)

SERVICE WATER SYSTEMS
See AUXILIARY WATER SYSTEMS

SEWAGE SLUDGE
Dependence of sludge digestion efficiency on mixing efficiency in the digester. Intermediate report, 16:14377 (I;DE;In German)
Two-stage intensive digestion of municipal sewage sludge by biological phase separation with a thermophilic first stage. Demonstration project. Intermediate report 1-1990, 16:14378 (I;DE;In German)

SHAFT EXCAVATIONS
See also MINE SHAFTS
Yucca Mountain Project: ESF Title I design control process review report, 16:14246 (R;US)

SHALE GAS
Characterization of liquid and gaseous products from the KENTORT II fluidized bed retort/gasifier, 16:14177 (RA;US)
Fluidized bed combustor test report for Proof-of-Concept Oil Shale Facility, Colorado Tract C-b, 16:14195 (R;US)

SHALE OIL
See also SHALE OIL FRACTIONS
Characterization of liquid and gaseous products from the KENTORT II fluidized bed retort/gasifier, 16:14177 (RA;US)
Conversion characteristics of 10 selected oil shales, 16:14168 (R;US)

SHALE OIL FRACTIONS
Application of synchrotron radiation for analysis of oil shale and shale derived products, 16:14181 (RA;US)

SHALLOW LAND BURIAL
See GROUND DISPOSAL

SHELL MODELS
Folded-diagram effective interactions with the Bonn meson-exchange potential model, 16:15757 (R;NO)

SHIELDING
Evaluation of the computer code system RADHEAT-V4 by analysing benchmark problems on radiation shielding, 16:15776 (R;JP;In Japanese)

SHIPS
Reception of wastes from ships in the Baltic Sea area - a MARPOL 73/78 special area, 16:15282 (R;FI)

SHOCK WAVES
Shock characterization of epoxy: 42 volume percent glass microballoons, 16:14953 (R;US)

SHORT CIRCUITS
See ELECTRICAL FAULTS

SHOWER COUNTERS
Design and construction of the ZEUS barrel calorimeter, 16:15152 (R;US)
Finite element calculations on rear calorimetermodules for the Zeus experiment, 16:15184 (R;NL)
Study on cosmic rays with the energy more than 1 TeV on satellites by means of the SOKOL detector, 16:15182 (R;SU;In Russian)
Test beam results from the D0 endcap electromagnetic calorimeter module, 16:15176 (R;US)
[The design of calorimeters for the L* detector]: Foreign trip report, March 3–9, 1991, 16:15189 (R;US)

SHOWERS
Fast shower simulation based on GauB's law, 16:15557 (R;US)

SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES

SIEGBAHN SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SIGMA MODEL
1/N-expansions of σ-models in 2 and 4 dimensions: Taking them to their technical limits, 16:15638 (R;DK)
Interpolating between O(N)-symmetric σ-models with N=1,2,3, 16:15639 (R;DK)

SIGMA-410 RESONANCES
See SIGMA MODEL
SIGNAL CONDITIONING
Consistency of effective-bits calculations, 16:15972 (R;US)
Expected errors computed from effective bits, 16:15973 (R;US)
SIGNALS
Overview of seismic signal conversion and processing operations, 16:15444 (R;US)
SILICA
Fundamental tests on recovery of valuable matters from coal ash. II.: Direct hydrofluoric acid leach process, 16:14007 (IA;JP;In Japanese)
In-situ scanned probe studies on site specificity of laser surface damage of graphite, sapphire, and multilayer coatings, 16:14935 (R;US)
SILICON
Anderson carrier localization effect in the Hubbard upper zone on silicon photoconductivity in the submillimeter spectral range, 16:15814 (IA;SU;In Russian)
Electronic properties of Si-doped n-doping-intrinsic-p-doping-intrinsic (nipi) structures in GaAs, 16:14956 (R;US)
Hydrogen diffusion and microstructure in undoped and boron-dope hydrogenated amorphous silicon: An IR and SIMS study, 16:15816 (R;US)
Impurity microprecipitates in silicon, 16:14905 (IA;SU;In Russian)
Solid-state theory, 16:14417 (RA;US)
Study of a-Si:H films implanted with transition metal ions, 16:15815 (IA;SU;In Russian)
SILICON 28 REACTIONS
K^+ production in relativistic nuclear collisions, 16:15718 (R;DE)
SILICON CARBIDES
Chevron-notched, flexure tests for measuring the elevated temperature fracture resistance of structural ceramics, 16:14926 (R;US)
Dopant effects on sintering behavior in ceramic matrix composites, 16:14933 (R;US)
Investigations on structure and thermomechanical behaviour of special silicon carbide grades in respect to their application in fusion reactors, 16:14929 (R;DE;In German)
SILICON COMPOUNDS
See also SILICON CARBIDES
SILICON NITRIDES
SILICON OXIDES
Amorphous silicon research, 16:14413 (RA;US)
SILICON NITRIDES
Chevron-notched, flexure tests for measuring the elevated temperature fracture resistance of structural ceramics, 16:14926 (R;US)
SILICON OXIDES
See also SILICA
Investigation of neutral atom and ion emission during laser conditioning of multilayer HfO_2-SiO_2 coatings, 16:14957 (R;US)
Two-channel spectroscopic polarization modulation ellipsometry: A new technique for the analysis thin SiOsub 2 films, 16:14925 (R;US)
SILICON SOLAR CELLS
Effect of oxygen and carbon impurities on the performance of silicon single crystal solar cells, 16:15810 (R;XA)
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells: Annual subcontract report, 1 October 1989–30 September 1990, 16:14418 (R;US)
SILVER
Applications of energetic particles in improving coating adhesion properties, 16:14892 (R;US)
Spontaneously adsorbed monolayer films: Fabrication, characterization, and application of monolayers of alkanethiol and sulfur-bearing cyclodestrin derivatives, 16:14982 (R;US)
SILVER IONS
A calculation of gain in Ne-like Ag soft x-ray lasers, 16:15063 (R;US)
SILVER SELENIDES
Laser Raman and luminescence spectroscopy, 16:14416 (RA;US)
SILVICULTURE
Converting short rotation forestry back into crop land, 16:14394 (R;SE;In Swedish)
SIMS
See MASS SPECTROSCOPY
SITE CHARACTERIZATION
Hanford Site Solid Waste Landfill permit application, 16:14250 (R;US)
Simulation of unsaturated flow and solute transport at the Las Cruces trench site using the PORFLO-3 computer code, 16:14303 (R;US)
SITE REHABILITATION
See REMEDIAL ACTION
SKIN
See also EPIDERMIS
Action of ^{40}K in low doses on biological active animal skin locuses, 16:15399 (IA;SU;In Russian)
Method of measuring absorbed doses and prediction of delayed effect of skin, accidental irradiation, 16:15426 (IA;SU;In Russian)
SKYRMIONS
See SOLITONS
SLOT OVENS
See COKE OVENS
SLOWPOKE TYPE REACTORS
Small Canadian reactors for heat, electricity and steam, 16:14541 (IA;CA)
SLUDGES
See also SEWAGE SLUDGE
Systematic approach for the design of pumpable cement-based grouts for immobilization of hazardous wastes, 16:14241 (R;US)
Utilization tests of fly ash stabilized by Poz-o-Tec system, 16:14005 (IA;JP;In Japanese)
SLUGS (FUEL)
See FUEL RODS
SLURRIES (FUEL)
See FUEL SLURRIES
SMALL ANGLE SCATTERING
A particle-in-cell method for modeling small angle Coulomb collisions in plasmas, 16:15872 (R;US)
SMALL-SCALE HYDROELECTRIC POWER PLANTS
Small-scale hydro power study of non-technical barriers, 16:14402 (R;GB)
SNOW
Measurement of the reduction of terrestrial gamma-ray dose rates by the snow cover using TL-dosimeters, 16:15239 (R;JP;In Japanese)
Snowmetric survey is a component geosystem monitoring at radioactive waste treatment station, 16:15794 (IA;SU;In Russian)
SODIUM
Advanced sensor development program for the pulp and paper industry: Final report, 16:14840 (R;US)
Behavior of specific heat and self diffusion coefficient of sodium near transition temperature: a molecular dynamics study, 16:15822 (R;PK)
SODIUM 22
An aerial radiological survey of the Fermi National Accelerator Laboratory and surrounding area, Batavia, Illinois: Date of survey: June 1989, 16:15226 (R;US)
SODIUM MINERALS
See MINERALS
SODIUM-SULFUR BATTERIES
Solid electrolyte tube for sodium sulfur cells and surface finishing process thereof, 16:14676 (PA;CA)
SOFC
See SOLID ELECTROLYTE FUEL CELLS
SOILING
See SURFACE CONTAMINATION
SOILS
Data acquisition and application of the soil chemistry model ECCES to forest soil, 16:15277 (R;DK)
Engineering-scale dust control experiments, 16:15230 (R;US)

Evaluation of oil shale solid waste for soil stabilization, 16:14188 (RA;US)
Exploratory research and development project for soil sampling probe investigation, 16:14335 (R;US)
Modeling radon entry into houses with basements: Model description and verification, 16:15244 (R;US)
Preliminary environmental investigations at the Lawrence Berkeley Laboratory, 16:15305 (R;US)
Rapid moisture measurements in thin sand slabs, 16:15325 (R;US)
Sampling and extraction techniques for organic analysis of soil samples, 16:15278 (R;US)
The Groundwater Monitoring Program at the Savannah River Site, 16:15295 (R;US)
The Nevada Test Site: Application of in situ monitoring of organics at a jet-a-fuel spill, 16:15270 (R;US)
Uses of generated surfactants from a new tar sand process for extracting hydrocarbons from natural and man-made materials, 16:14147 (RA;US)

SOLAR AIR HEATERS
Heating of a large industrial building with solar air-collectors in comparison with a conventionally heated building: Demonstration project: Final report, 16:14426 (R;LU;In German, English)

SOLAR ARCHITECTURE
One day course in passive solar heat/insulation, 16:14432 (I;DK;In Danish)

SOLAR CELLS
See also CONCENTRATOR SOLAR CELLS
SILICON SOLAR CELLS
Frame for solar cell devices, 16:14424 (PA;CA)
IOSAFS Phase 2 enhancements, 16:15209 (R;US)
Solar cell device, 16:14425 (PA;CA)
Solar generator, 16:14423 (PA;CA)

SOLAR COLLECTORS
See also SOLAR AIR HEATERS
SOLAR PONDS
Development of roof solar collectors, 16:14433 (R;DK;In Danish)
Solar collector manufacturing activity, 1989 (Glossary included), 16:14408 (R;US)

SOLAR CONCENTRATORS
The DOE Solar Thermal Electric Program Concentrator Technology Project, 16:14434 (R;US)

SOLAR CORONA
Numerical simulation of a magnetic reconnection in the solar corona, 16:15462 (R;XA)

SOLAR ENERGY
INFOSOLAR annual report 1989, 16:14420 (R;CH;In DE,FR,IT)
SERC progress report 1990, 16:14407 (R;SE)

SOLAR HEATING
Environmental consequences of the use of new energy technology: Solar heating, heat storage, heat pumps, 16:14409 (R;SE;In Swedish)

SOLAR HEATING SYSTEMS
See also PASSIVE SOLAR HEATING SYSTEMS
SOLAR-ASSISTED HEAT PUMPS
Solar heating system using a standard hot water container as a heat storage feasibility, 16:14428 (R;DK;In Danish)

SOLAR INDUSTRY
Solar collector manufacturing activity, 1989 (Glossary included), 16:14408 (R;US)

SOLAR MODELS
See STAR MODELS

SOLAR NEUTRINOS
The Sudbury Neutrino Observatory project and the Kamiokande II project: Technical progress report, July 1, 1990–June 30, 1991, 16:15535 (R;US)
The status of GALLEX, 16:15153 (R;US)

SOLAR PONDS
Solar trap for water heating, 16:14430 (I;DE;In German)

SOLAR RADIATION
Clear sky solar insolation data for Islamabad, 16:15233 (R;XA)

SOLAR THERMAL CONVERSION
Nonnuclear energies: European Working Group on Solar Thermal Plant Monitoring: Proceedings of the 1st and 2nd meeting, 16:14406 (R;LU)

SOLAR THERMAL POWER PLANTS
General theme report: Working session 2, Solar thermal systems, 16:14427 (R;US)

SOLAR WATER PUMPS
Water pumping system Freiburg: Demonstration project: Final report, 16:14470 (R;LU;In German, English)

SOLAR-ASSISTED HEAT PUMPS
Energy-technology study of a solar heat pump: P. Knuesel pilot installation, Altnau: Final report, 16:14798 (R;CH;In German)

SOLENOIDS
SOLDESIGN user's manual©, 16:15928 (R;US)

SOLID ELECTROLYTE FUEL CELLS
Cathodes
Development of improved cathodes for solid oxide fuel cells, 16:14771 (RA;US)
Design
High temperature solid oxide electrolyte fuel cell power generation system, 16:14765 (RA;US)
Electrodes
Planar SOFC development status, 16:14768 (RA;US)
SOFC materials development: Chromite interconnections, 16:14770 (RA;US)
Solid oxide fuel cell materials, 16:14772 (RA;US)
Environmental Impacts
Gas Research Institute fuel cell activities (power range 1 kW to 200 MW), 16:14756 (RA;US)
Hot Gas Cleanup
Status of hot gas cleanup technology, 16:13951 (RA;US)
Matrix Materials
Monolithic solid oxide fuel cell materials, 16:14773 (RA;US)
SOFC materials development: Chromite interconnections, 16:14770 (RA;US)
Solid oxide fuel cell materials, 16:14772 (RA;US)
Solid oxide fuel cell processing using plasma arc spray deposition techniques: Plasma arc spray deposition of SOFC interconnects, 16:14766 (RA;US)
Research Programs
Electric Power Research Institute 1990 fuel cell status, 16:14755 (RA;US)
Gas Research Institute fuel cell activities (power range 1 kW to 200 MW), 16:14756 (RA;US)
METC perspective, 16:14754 (RA;US)
Solid Electrolytes
Evaluation of novel solid electrolyte materials, 16:14769 (RA;US)
Planar SOFC development status, 16:14768 (RA;US)
Solid oxide fuel cell materials, 16:14772 (RA;US)
Technology Assessment
Electric Power Research Institute 1990 fuel cell status, 16:14755 (RA;US)
Monolithic SOFC technology status, 16:14767 (RA;US)
The DOE fuel cell for transportation program, 16:14774 (RA;US)
Uses
Gas Research Institute fuel cell activities (power range 1 kW to 200 MW), 16:14756 (RA;US)

SOLID ELECTROLYTES
Planar SOFC development status, 16:14768 (RA;US)
Solid oxide fuel cell materials, 16:14772 (RA;US)

SOLID LUBRICANTS
Mechanical strength and thermophysical properties of PM212: A high temperature self-lubricating powder metallurgy composite, 16:14843 (R;US)

SOLID STATE PHYSICS
Annual report 1989/1990, 16:15984 (R;SE)

SOLID WASTES
See also SCRAP
TAILINGS
Hanford Site Solid Waste Landfill permit application, 16:14250 (R;US)

Systematic approach for the design of pumpable cement-based grouts for immobilization of hazardous wastes, 16:14241 (R;US)
Waste reduction program at Oak Ridge National Laboratory during CY 1990, 16:14300 (R;US)

SOLITONS
Green's functions of solitons in heat bath, 16:15626 (R;SU)

SOLUTIONS
See also LEACHATES
PROCESS SOLUTIONS
Dielectric spectra of proteins in conducting media, 16:14977 (R;XA)

SOLVENTS
Reduction of solvent use through fluxless soldering, 16:14699 (R;US)

SONIC LOGGING
Logging method and apparatus using a rotating sensor, 16:15195 (PA;CA)

SORBENT INJECTION PROCESSES
Comparative analyses for selected clean coal technologies in the international marketplace, 16:14045 (R;US)
Enhancing the use of coals by gas reburning-sorbent injection: Quarterly report No. 13, October 1–December 31, 1990, 16:14492 (R;US)
Fundamental investigation of duct/ESP phenomena: Topical report No. 6, First Generation Duct Injection Model, 16:14494 (R;US)
Theoretical approach for enhanced mass transfer effects in-duct flue gas desulfurization processes: Quarterly report No. 10, October 1, 1990–December 31, 1990, 16:13997 (R;US)

SORGHUM
Sweet sorghum (sorghum bicolor) as an alcoholic hill cultivation, 16:14370 (R;LU)

SOURCE TERMS
HUDU: The Hanford Unified Dose Utility computer code, 16:14648 (R;US)
Radionuclide source term reconstruction at the Feed Materials Production Center, 16:14337 (R;US)
Uncertainties in source term calculations generated by the ORIGEN2 computer code for Hanford Production Reactors: Hanford Environmental Dose Reconstruction Project, 16:14647 (R;US)

SOUTH KOREA
See REPUBLIC OF KOREA

SOVIET RESEARCH REACTOR IRT
See IRT REACTOR

SOVIET UNION
See USSR

SPACE POWER REACTORS
See also SPACE PROPULSION REACTORS
A comparison between classical and substructuring finite-element stress analysis of a complex vacuum vessel shell, 16:14542 (R;US)
Successful neural network projects at the Idaho National Engineering Laboratory, 16:15974 (R;US)

SPACE PROPULSION REACTORS
Fission fragment rocket scientific feasibility assessment: Final report, 16:14612 (R;US)
Gas core reactors for direct nuclear propulsion, 16:14611 (R;US)

SPACE REFLECTION
See P INVARIANCE

SPECIAL PRODUCTION REACTORS
See also K REACTOR
L REACTOR
Air-water hydraulics modeling for a Mark-22 fuel assembly with RELAP5, 16:14652 (R;US)
Reactor operation safety information document, 16:14653 (R;US)
Reactors PMT backlog, 16:14626 (R;US)
SRP reactor safety evolution: Revision 1, 16:14625 (R;US)
Scaling analysis for a Savannah River reactor scaled model integral system, 16:14627 (R;US)
Subcooled burnout correlation for annuli, 16:14624 (R;US)
The potential for fuel-target mixing during a fuel melting accident in an SRS fuel assembly, 16:14651 (R;US)

SPECIAL RELATIVITY THEORY
See RELATIVITY THEORY

SPECTRA (FISSION)
See FISSION SPECTRA

SPECTRA (NEUTRON)
See NEUTRON SPECTRA

SPECTROMETERS
See also ELECTRON SPECTROMETERS
FOURIER TRANSFORM SPECTROMETERS
GAMMA SPECTROMETERS
INFRARED SPECTROMETERS
MAGNETIC SPECTROMETERS
NMR SPECTROMETERS
NEUTRON SPECTROMETERS
Radiation coding as a high-efficient method for recording information on radioisotope distribution in a body, 16:15165 (IA;SU;In Russian)

SPECTROSCOPY
See also EMISSION SPECTROSCOPY
GAMMA SPECTROSCOPY
MASS SPECTROSCOPY
Aspects of optical fibers and spectrometric sensors in chemical process and industrial environments, 16:14962 (R;FR)

SPENT FUEL CASKS
Approach for implementing burnup credit in high-capacity truck casks, 16:15002 (R;US)
Contamination weeping: A chemical ion exchange model, 16:15012 (R;US)
Development of the GA-4 and GA-9 legal weight truck spent fuel shipping casks, 16:15003 (R;US)
GA-4/GA-9 honeycomb impact limiter tests and analytical model, 16:15004 (R;US)

SPENT FUEL ELEMENTS
Literature review of crud spallation source with application to a nuclear waste repository, 16:14310 (R;US)
Site characterization and validation - hydrochemical investigations. Stage 3, 16:15448 (R;SE)
Site characterization and validation - stress field in the SCV block and around the validation drift. Stage 3, 16:15449 (R;SE)
The Stripa project. Annual report 1989, 16:15450 (R;SE)

SPENT FUEL STORAGE
Nuclear accountability in dry vault storage, 16:14227 (IA;CA)

SPENT FUELS
Closing the circle: Returning used uranium to the geologic environment, 16:14275 (IA;CA)
Radiolytically induced oxidative dissolution of spent nuclear fuel, 16:14992 (R;SE)
Thermal simulation of drift emplacement for direct disposal of spent fuel: Evaluation of the backfilling technique, 16:14276 (IA;CA)

SPENT LIQUORS
A comprehensive program to develop correlations for the physical properties of kraft black liquors: Interim report No. 2, 16:14385 (R;US)
Method and apparatus for introducing combustion air into a furnace, 16:14863 (PA;CA)

SPENT SHALES
Application of synchrotron radiation for analysis of oil shale and shale derived products, 16:14181 (RA;US)
Chemical equilibria model analysis of Hope Creek eastern oil shale lysimeter leachate data, 16:14191 (RA;US)
Conversion characteristics of 10 selected oil shales, 16:14168 (R;US)
Evaluation of oil shale solid waste for soil stabilization, 16:14188 (RA;US)
Fluidized-bed retorting of eastern oil shale, 16:14164 (RA;US)
Kinetics of selected heavy metal dissolution from shale, 16:14187 (RA;US)
Operation of the 5-lb/hr KENTORT II reactor in the solid recirculation mode, 16:14165 (RA;US)
Rainfall simulation and hydrologic monitoring of a combusted western oil shale in large scale lysimeters, 16:14194 (RA;US)
Removal of hydrogen sulfide by combusted Rundle oil shale: Sulfidation of iron oxides, 16:14190 (RA;US)

Simulated climate and shale pile response within a large scale environmental chamber developed in Wyoming, 16:14193 (RA;US)

SPHEROMAK DEVICES
The computation of resistive MHD instabilities in axisymmetric toroidal plasmas, 16:15917 (R;US)

SPIN
Generalized killing equations and symmetries of spinning space, 16:15642 (R;NL)
Signatures for isoscalar spin transitions excited in (d, d') reactions, 16:15747 (R;FR)
Superdeformation at and above the Yrast, 16:15693 (R;FR)

SPIRAL ORBIT SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SPLEEN
Modulation of lymphopoiesis: Annual report, 16:15352 (R;US)

SPOIL BANKS
Rainfall simulation and hydrologic monitoring of a combusted western oil shale in large scale lysimeters, 16:14194 (RA;US)
Simulated climate and shale pile response within a large scale environmental chamber developed in Wyoming, 16:14193 (RA;US)

SPONTANEOUS FISSION
Cf-252 neutron spectrum, 16:15706 (R;XA)

SQUID DEVICES
Nuclear magnetic resonance experiments with dc SQUID amplifiers, 16:15052 (R;US)

STAINLESS STEEL-18-4-1
See STAINLESS STEELS

STAINLESS STEEL-19-9DL
See STAINLESS STEELS

STAINLESS STEEL-304
Contamination weeping: A chemical ion exchange model, 16:15012 (R;US)
Reliability evaluation of the Savannah River reactor leak detection system, 16:14590 (R;US)

STAINLESS STEEL-316
Aqueous corrosion and stress corrosion of 316SS for the ITER water-cooled blanket concept: Progress report, 1 January 1991–1 April 1991, 16:15926 (R;US)

STAINLESS STEEL-316L
Crack propagation behaviour in stainless steel AISI 316L at elevated temperatures under static and cyclic loading, 16:14909 (R;DE;In German)

STAINLESS STEEL-Z2CND17-12
See STEEL-CR17NI12MO3-L

STAINLESS STEEL-Z3CND17-12
See STEEL-CR17NI12MO3-L

STAINLESS STEELS
Analysis of crack initiation and growth in the high level vibration test at Tadotsu, 16:14616 (R;US)
Chimneys for condensing oil-fired furnaces, 16:15040 (R;CH;In German)
Corrosion in sea water at different depths, 16:14910 (R;SE;In Swedish)
Evaluation of filler metals for high-strength stainless steels, 16:14898 (R;US)
Modeling second-phase formation during rapid resolidification of stainless steel alloys, 16:14920 (R;US)
The strength and toughness of stainless steels at cryogenic temperature, 16:14914 (R;US)

STANDARD ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL

STANDARD MODEL
The supersymmetric vector-like horizontal model with intermediate symmetry breaking scale, 16:15623 (R;SU)

STANDING CROP
See BIOMASS

STAR MODELS
Turbulent dynamo action in stars, 16:15474 (R;DK)

STARS
Characteristics of shock waves in neutrino-thick medium of collapsing stars, 16:15466 (R;SU;In Russian)

STATISTICAL MECHANICS
Recursive integral equations with positive kernel for lattice calculations, 16:15645 (R;NO)

STEAM GENERATORS
A theory for fluidelastic instability of tube-support-plate inactive modes, 16:14480 (R;US)
A theory for fluidelastic instability of tube-support-plate inactive modes, 16:15024 (R;US)

STEAM TURBINES
Material property decradation of steam turbine rotors in long-term operations, 16:14487 (R;FI;In Finnish)

Spontaneously adsorbed monolayer films: Fabrication, characterization, and application of monolayers of alkanethiol and sulfur-bearing cyclodestrin derivatives, 16:14982 (R;US)

THIONAPHTHENES
Applications of micellar enzymology to clean coal technology: Fifth quarterly report, 16:13963 (R;US)
Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and thiobacillae: Annual report, 16:13968 (R;US)
Enhancement of microbial coal desulfurization: Final report, 16:13954 (R;US)
Molecular biological enhancement of coal biodesulfurization: Ninth quarter report, November 1990–January 1991, 16:13956 (R;US)
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and thiobacillae: Sixth quarterly report, [October–December 1990], 16:13969 (R;US)

THORIUM 232
Preliminary site survey report of the Copperweld Steel Company, 4000 Mahoning Avenue, NW, Warren, Ohio (CWO001), 16:14340 (R;US)

THORIUM 232 TARGET
Chinese Evaluated Fission-Product Yield Library 1987 (preliminary), 16:15705 (R;XA)
Prompt γ-rays from ^{232}Th, ^{235}U, and ^{238}U fission fragments, 16:15709 (RA;XA)

THORIUM CYCLE
The Canadian program on thorium fuel cycles in CANDU reactors, 16:14528 (IA;CA)

THREE MILE ISLAND-2 REACTOR
Degradation of resins in EPICOR-II prefilters from Three Mile Island, 16:14263 (R;US)
Results of field testing of waste forms using lysimeters, 16:14262 (R;US)

THULIUM
Intermultiplet transitions using neutron spectroscopy, 16:15506 (R;GB)

THYMIDINE
Regularities and molecular mechanisms of postradiation thymidinemia, 16:15396 (IA;SU;In Russian)

THYMUS
Modulation of lymphopoiesis: Annual report, 16:15352 (R;US)

THYROID
Prophylaxis of radiation injuries of thyroid by means of new selective radiation substance, 16:15424 (IA;SU;In Russian)

THYROXINE
On the problem of possibility of simulating of chromosomal postradiation recovery after finishing of spontaneous repair: modifying action of thyroxine, 16:15403 (IA;SU;In Russian)

TIDAL POWER PLANTS
A review of methods of extrapolating tidal model predictions to long term siltation effects in estuaries, 16:14464 (R;GB)

TIME INTERVAL ANALYZERS
Digital time-interpolator: Final term subject, 16:15188 (R;NL;In Dutch)
Time-interpolator: Final term subject, 16:15187 (R;NL;In Dutch)

TIMING CIRCUITS
Precise timing signal transmission by a new optical fiber cable, 16:15126 (R;JP)

TIN
Studies of the effects of organic materials on the sorption of tin and radium, 16:15275 (R;GB)

TIN 116 TARGET
Neutron cross sections and tin isotope strength functions in method of coupled channels, 16:15738 (IA;SU;In Russian)

TIN 118 TARGET
Neutron cross sections and tin isotope strength functions in method of coupled channels, 16:15738 (IA;SU;In Russian)

TIN 120 TARGET
Neutron cross sections and tin isotope strength functions in method of coupled channels, 16:15738 (IA;SU;In Russian)

TIN ALLOYS
Impurity tolerant electrocatalysts, 16:14777 (RA;US)

TITANATES
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents: Quarterly technical progress report No. 10, 16:13958 (R;US)

TITANIUM CARBIDES
Measurement of partial coefficients of sputtering of titanium atoms from TiC and TiN coatings, 16:14928 (IA;SU;In Russian)
Plasma sprayed titanium carbide coatings for first wall applications in fusion devices, 16:15939 (R;NL)

TITANIUM ISOTOPES
Microbeam titanium isotopic analysis by resonance ionization mass spectrometry, 16:15458 (R;US)

TITANIUM NITRIDES
Measurement of partial coefficients of sputtering of titanium atoms from TiC and TiN coatings, 16:14928 (IA;SU;In Russian)
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells: Annual subcontract report, 1 October 1989–30 September 1990, 16:14418 (R;US)

TITANIUM OXIDES
Titania extrudates, 16:14996 (PA;CA)

TMPN

See WIND TURBINES

WEINBERG LEPTON MODEL
1/N-expansions of σ-models in 2 and 4 dimensions: Taking them to their technical limits, 16:15638 (R;DK)

A dependence of perturbative predictions of extended standard model on Z-Z' mixing and QCD renormalization scheme parameters, 16:15576 (R;XA)
Electroweak multi-particle-production at TeV energies?, 16:15568 (R;DE)
Phase space structure in gauge theories, 16:15857 (R;SU;In Russian)
Sphalerons and energy barriers in the Weinberg-Salam theory, 16:15602 (R;NL)
W-condensate formation in high energy collisions, 16:15600 (R;DK)

WEINBERG MODEL
See WEINBERG LEPTON MODEL

WEINBERG-SALAM GAUGE MODEL
Selected problems in experimental intermediate energy physics: Progress report, February 1, 1990–January 31, 1991, 16:15534 (R;US)

WELDED JOINTS
Application of elastic and elastic-plastic fracture mechanics methods to surface flaws, 16:14893 (R;US)
Reduction factors for creep strength and fatigue life of modified 9 Cr-1 Mo steel weldments: Confirmation by axial or torsional tests of tubular specimens with longitudinal or circumferential welds, 16:14895 (R;US)

WELDS
See WELDED JOINTS

WELL DRILLING
Drilling fluids and muds containing selected ester oils, 16:14072 (PA;CA)
Extensometric sensor measuring the stress on a boring element and assembly for said sensor, 16:15046 (PA;CA;In French)
Practical guide for testing and maintenance of high temperature drilling fluids during drilling, coring, logging, and cementing wellbores, 16:15045 (R;US)
Use of selected ester oils in drilling fluids and muds, 16:14073 (PA;CA)

WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY

WESTINGHOUSE STANDARD REACTOR
Aging mechanisms in the Westinghouse PWR [Pressurized Water Reactor] Control Rod Drive system, 16:14585 (R;US)

WETLANDS
Short-rotation cultivation of fast-growing willows and plantations of Betula pendula, Roth on Hirvineva, a mire formerly used for peat production, in Liminka, Finland, 16:14375 (R;FI;In Finnish)

WHITE DWARF STARS
The DBAQ G35-26, 16:15472 (R;DK)
The effective temperature of the DBV's, and the sensitivity of DB model atmospheres to input physics (GD-358.), 16:15473 (R;DK)

WIGGLER MAGNETS
Radiation from wigglers in the low energy ring of an asymmetric B factory, 16:15140 (R;US)

WILLOWS
Investigations on short rotation forestry for energy: Final report, 16:14371 (R;LU)
Short-rotation cultivation of fast-growing willows and plantations of Betula pendula, Roth on Hirvineva, a mire formerly used for peat production, in Liminka, Finland, 16:14375 (R;FI;In Finnish)

WIND
See also TORNADOES
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Efficiency Characteristics (Denmark), 16:14478 (R;DK;In Danish)
Extreme values of wind speeds in Denmark, 16:15254 (R;DK)

WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES

WIND FARMS
See WIND TURBINE ARRAYS

WIND GENERATORS
See ELECTRIC GENERATORS
WIND TURBINES

WIND POWER
BERWIAN - development, construction and operation of a novel wind power plant with a vortex screw concentrator (Phase II). Final report, 16:14466 (I;DE;In German)
Wind energy: European research and development: Contractors' catalogue, 1989, 16:14468 (R;LU)

WIND TURBINE ARRAYS
Cardinal planning of measuring programmes for marine wind turbine arrays, 16:14677 (I;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Text, 16:14477 (R;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Data on the electricity quality (Denmark), 16:14479 (R;DK;In Danish)
Estimation of interactions between the wind turbines in an array, carried out on the basis of measurements on Ebeltoft Moellepark: Efficiency Characteristics (Denmark), 16:14478 (R;DK;In Danish)
Taendpibe wind farm measurements 1988, 16:14475 (R;DK)

WIND TURBINES
See also HORIZONTAL AXIS TURBINES
VORTEX AUGMENTED TURBINES
Control aspects of the brushless doubly-fed machine: Final report, 16:14405 (R;US)
Power conversion system, 16:15069 (PA;CA)
Preliminary investigation of regulation of number of rotations of wind turbine blades, 16:14471 (I;DK;In Danish)
Two 250 KW windturbines and two 600 KW total energy installations, 16:14469 (R;FR)
Utilization of wind energy in conjunction with a heat pump for greenhouse heating, 16:14854 (R;FR)
Wind energy for easterhoull chalets. Demonstration project, 16:14467 (R;FR)

WIND-POWERED PUMPS
Water pumping system Freiburg: Demonstration project: Final report, 16:14470 (R;LU;In German, English)

WINDOWS
Energy studies for a variable heating and protective element for use in the air gap of window glazings, 16:14808 (R;CH;In German)
Heating window, 16:14833 (PA;CA;In French)
Mechanical Safety Subcommittee guideline for design of thin windows for vacuum vessels, 16:15112 (R;US)

WIPP
Geotechnical Field Data and Analysis Report, July 1989–June 1990: Volume 2, 16:14257 (R;US)

WIRES
See also SUPERCONDUCTING WIRES
Bobbin stresses generated by wire winding, 16:15013 (R;US)

WOLFRAM
See TUNGSTEN

WOOD
New alternatives for electricity production: Part 2. Comparision of gasification combined-cycle techniques for peat and wood, 16:13982 (R;FI;In Finnish)

WOOD ALCOHOL
See METHANOL

WOOD FUELS
Gasification of wood fuels and electric power generation with a diesel engine: Long-term experiment in CFBG-pilot plant at Studsvik, 16:14384 (R;SE;In Swedish)
Harvesting forest biomass for energy, 16:14372 (R;LU)
Inventory of the biofuel potential in southern Sweden, 16:14392 (R;SE;In Swedish)
Wood fuels, 16:14386 (IA;DK;In Danish)

WOOD-FUEL POWER PLANTS
Prestudy on wood fuel fired demonstration plants, 16:14391 (R;SE;In Swedish)

WORKERS
See PERSONNEL

WORKING FACES
Present study for coal mining production, 16:14014 (IA;JP;In Japanese)
Technical progress of coal mining engineering, 16:14013 (IA;JP;In Japanese)
WWER TYPE REACTORS
See also ROVNO-1 REACTOR
ROVNO-2 REACTOR
WWER-5 REACTOR
Decontamination is a measure for decreasing personnel exposure, 16:14639 (IA;SU;In Russian)
WWER-1000 REACTOR
See WWER-5 REACTOR
WWER-5 REACTOR
Account and standardization of collective doses at NPP with WWER, 16:15785 (IA;SU;In Russian)
Hydrogen isotope production in the WWER-1000 reactor, 16:14521 (IA;SU;In Russian)
WWER-500 REACTOR
See WWER-5 REACTOR
WWR-M-LENINGRAD REACTOR
Determination of radioactive aerosol disperse composition in research reactor technological systems, 16:14604 (IA;SU;In Russian)
WYOMING
Rainfall simulation and hydrologic monitoring of a combusted western oil shale in large scale lysimeters, 16:14194 (RA;US)
Simulated climate and shale pile response within a large scale environmental chamber developed in Wyoming, 16:14193 (RA;US)

X

X RADIATION
Radiation from wigglers in the low energy ring of an asymmetric B factory, 16:15140 (R;US)
X-2830 RESONANCES
See MESONS
X-RASERS
See X-RAY LASERS
X-RAY DETECTION
Study and characterization of III-V semiconductor materials for applications in ionizing radiation detection, 16:14947 (R;FR;In French)
X-RAY DIFFRACTOMETERS
X-ray spectrometer-polarimeter for the surface component analysis under ionic excitation of characteristic radiation, 16:15183 (R;SU;In Russian)
X-RAY LASERS
A calculation of gain in Ne-like Ag soft x-ray lasers, 16:15063 (R;US)
Collisional excitation x-ray lasers, 16:15062 (R;US)
X-RAY RADIOGRAPHY
Quantitative film radiography, 16:15036 (R;US)
X-RAY SOURCES
Possibilities for projection x-ray lithography using holographic optical elements, 16:15819 (R;US)
XENON
Electron correlation explored through electron spectrometry using synchrotron radiation, 16:15483 (R;US)
Energy partitioning in elementary reactions: Progress report, November 1, 1989–October 31, 1990, 16:14990 (R;US)
XENON 124
Concerning possibility of search for $k\beta^+$ decay of ^{124}Xe, 16:15697 (R;SU)

Y

Y*RESONANCES
See BARYONS
Y-12 PLANT
Groundwater quality assessment for the Bear Creek hydrogeologic regime at the Y-12 Plant: Groundwater quality data and calculated rate of contaminant migration: Part 1, 16:15331 (R;US)
West End Treatment Facility corrosion status, 16:14320 (R;US)
YAMS
Technology and economic interest of food irradiation, illustrated by a range of facilities, 16:15367 (RA;XA;In French)
Yams preservation by irradiation in Cote d'Ivoire, 16:15378 (RA;XA;In French)
YANG-MILLS THEORY
On the zero mode of the Poisson gauge theory, 16:15621 (R;XA)
Phase space structure in gauge theories, 16:15857 (R;SU;In Russian)
YEASTS
See also SACCHAROMYCES
Effect of combined ionizing and laser radiations on survival rates of haploid and diploid yeasts cells, 16:15393 (IA;SU;In Russian)
YIELD (FISSION)
See FISSION YIELD
YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS
YTTERBIUM 163
Nuclear rotation. Part 6: 6.Quasiclassical model for odd nucleons spin alignment, 16:15719 (R;SU)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS
YTTRIUM COMPOUNDS
YTTRIUM COMPOUNDS
See also YTTRIUM OXIDES
Diffusion in $YBa_2Cu_3O_{7-\delta}$, 16:14937 (R;US)
Microstructure of epitaxial $YBa_2Cu_3O_7$ thin films, 16:14990 (R;US)
Peculiarity of anti-Stokes luminescence from $^4S_{3/2}$ level in $Y_3Al_2O_{12}$-Er^{3+} high concept rated crystals, 16:15813 (IA;SU;In Russian)
Theory of the critical current density in $YBa_2Cu_3O_7$ ceramics, 16:14924 (R;US)
YTTRIUM ISOTOPES
Report to the DOE Nuclear Data Committee, 1991, 16:15682 (R;US)
YTTRIUM OXIDES
Development of improved cathodes for solid oxide fuel cells, 16:14771 (RA;US)
Electron and gamma irradiation effects on properties of high temperature oxide metal ceramics, 16:14927 (IA;SU;In Russian)
Fermi surface of YBCO by DHVA, 16:14932 (R;US)
Practical superconductor development for electrical power applications: Annual report for FY 1990, 16:14922 (R;US)
YUCCA MOUNTAIN
A constitutive model for jointed rock mass with two intersecting sets of joints, 16:14307 (R;US)
Analysis of component surface/downhole ground motions at Yucca Mountain for underground nuclear explosions in Pahute Mesa, 16:14306 (R;US)
Estimates of spatial correlation in volcanic tuff, Yucca Mountain, Nevada: Yucca Mountain Site Characterization Project, 16:14309 (R;US)
Prototype Engineered Barrier System Field Tests (PEBSFT): Progress report through November 1, 1988, 16:14312 (R;US)
Yucca Mountain Project bibliography, January–June 1989: An update: Supplement 2, Add. 1, 16:14247 (R;US)
Yucca Mountain Project: ESF Title I design control process review report, 16:14246 (R;US)

Z

Z NEUTRAL BOSONS
A dependence of perturbative predictions of extended standard model on Z-Z' mixing and QCD renormalization scheme parameters, 16:15576 (R;XA)

ZEA MAYS
See MAIZE
ZEOLITES
Catalytic reactions using zeolite, 16:14959 (PA;CA)
Structural and textural characterization of dealuminated zeolites Y. Location of extra framework species by the Rietveld method, 16:14979 (R;FR;In French)
ZERO POWER REACTORS
Experimental and calculational study of small sample reactivity in critical assemblies with different heterogeneous structure, 16:14605 (IA;SU;In Russian)
ZET PINCH
See LONGITUDINAL PINCH
ZINC
Metabolism and toxicity of trace metals in the marine mussel, Mytilus edulis: Final report, July 1, 1986–January 30, 1990, 16:15435 (R;US)
ZINC 64 TARGET
Measurement and evaluation of the averaged cross sections for the $^{64}Zn(n,p)^{64}Cu$, $^{90}Zr(n,2n)^{89}Zr$, $^{111}Cd(n,n')^{111m}Cd$ reactions for the ^{235}U fission neutrons, 16:15692 (IA;SU;In Russian)
ZINC OXIDES
Dopant effects on sintering behavior in ceramic matrix composites, 16:14933 (R;US)
Hot gas desulfurization with sorbents containing oxides of zinc, iron, vanadium and copper: Quarterly technical progress report, [October–December 1990], 16:13973 (R;US)
Mechanistic and kinetic studies of high-temperature coal gas desulfurization sorbents: Quarterly technical progress report No. 10, 16:13958 (R;US)
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells: Annual subcontract report, 1 October 1989–30 September 1990, 16:14418 (R;US)
ZION STATION UNIT-1
See ZION-1 REACTOR
ZION STATION UNIT-2
See ZION-2 REACTOR
ZION-1 REACTOR
Estimation of containment pressure loading due to direct containment heating for the Zion Plant, 16:14644 (R;US)
ZION-2 REACTOR
Estimation of containment pressure loading due to direct containment heating for the Zion Plant, 16:14644 (R;US)
ZIRCONIUM 90 TARGET
Measurement and evaluation of the averaged cross sections for the $^{64}Zn(n,p)^{64}Cu$, $^{90}Zr(n,2n)^{89}Zr$, $^{111}Cd(n,n')^{111m}Cd$ reactions for the ^{235}U fission neutrons, 16:15692 (IA;SU;In Russian)
ZIRCONIUM ISOTOPES
Report to the DOE Nuclear Data Committee, 1991, 16:15682 (R;US)
ZIRCONIUM OXIDES
Creep and oxidation behaviour of SiC-whisker-reinforced Al_2O_3/ZrO_2 composites, 16:14951 (R;DE;In German)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no.

☐ Check/Money Order enclosed for $

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____
Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions)

Employer identification number (9 digits) _ _–_ _ _ _ _ _ _

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
National Technical Information Service
5285 Port Royal Road
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
